The Life Of Repton

REPTON AS A BABY

REPTON AT SCHOOL

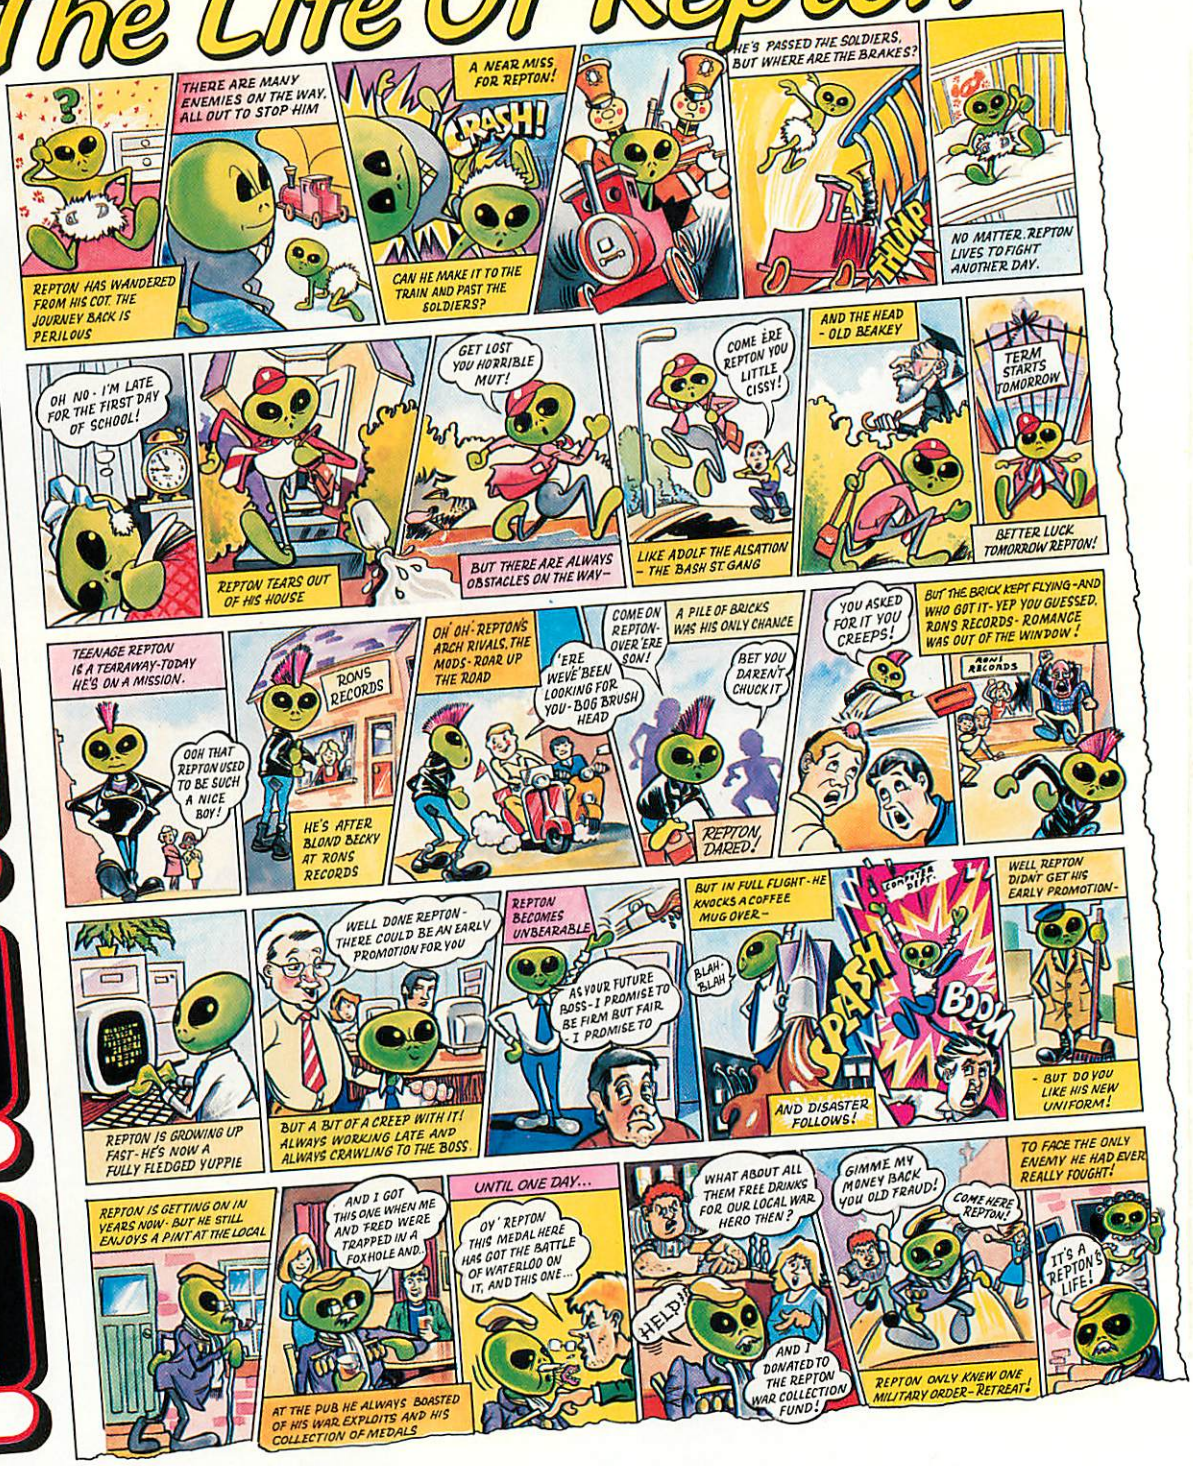

REPTON AS A TEENAGER

REPTON AT WORK

REPTON AS AN OLD MAN

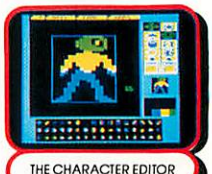

Repton fans have begged, cajoled and pleaded with us to release another set of screens for our Repton 3 game. How could we refuse? Our lovable hero returns again to star in 40 new screens that vividly depict Repton's life-story.

The Five Ages of Repton:— At first we see Repton as a baby: a mewling infant surrounded by teddy-bears, humpty-dumptys, and aggressive clockwork toy-soldiers. Then Repton is a whining school-boy, creeping like snail unwillingly to school, with his pens, his calculator, and a bundle of homework. And then Repton during his teenage years becomes a spikey-haired punk armed with a ghetto-blaster and a collection of records. Then Repton goes to work: we see a harried office-manager amidst computers, photocopiers, and endless cups of coffee. Last scene of all, that ends this strange eventful history, is Repton as an old-age pensioner searching for his false-teeth, his spectacles, his "pint of stout", and his well-polished war-medals.

THE SCREEN EDITOR

THE CHARACTER EDITOR

Each copy of The Life Of Repton includes:
● the Repton 3 main program ● the Repton 3 editor and ● the 40 new game screens

BBC Micro Cassette	£6.95	Acorn Electron Cassette	£6.95
BBC Micro 5¼" Disc	£7.95	Acorn Electron 5¼" Disc	£7.95
BBC Master Compact 3½" Disc	£9.95		

(Compatible with the BBC B, B+ and Master Series computers).
The screen pictures show the BBC Micro version of the game.

PRIZE COMPETITION

If you complete all 40 screens of The Life of Repton, you can enter our competition. Prizes include £200 in cash, with Repton mugs, badges, pens and certificates for runners-up.

Closing Date: 30th June 1988.

Master Modem

A new internal modem for the Master 128 that requires no soldering and may be fitted in a matter of minutes. The modem features V21/V23 baud rates which are ideal for Prestel, Micronet etc, auto-baud rate selection, tone and pulse dialing, auto-dial and auto-answer. An interesting feature is that it uses the internal Master speaker for call progress monitoring. The modem is supplied with the highly acclaimed Beebug Command ROM.

Stock Code 0759E Price £119.00

NEWS

Micro guide revised

The programmer's bible has been brought up to date. The *New Advanced User Guide* contains all the detailed information programmers need. The new version, published by

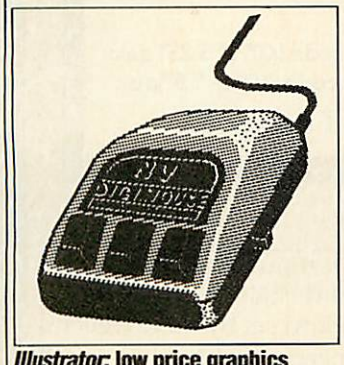

Essential reading updated

Adder at £19.95, now includes Master and Compact topics such as CMOS RAM and the real-time clock.

Cheaper art

Nidd Valley is a late entry into the art package market but its new *Illustrator* software is inexpensive – for just under £50 you get the software and Nidd Valley's Digimouse. However,

***Illustrator*: low price graphics**

the software works with any BBC-compatible mouse, and costs £20 by itself.

Illustrator is disc based and includes pixel and font editors and other utilities.

MS-DOS Arc enters education battle

By Steve Mansfield

Acorn is looking to corner all sections of the education market by launching an MS-DOS version of the Archimedes and an interface which lets IBM-compatible PCs link in to Econet. The prices of the 300 series have also been dropped by £100.

The 310M is essentially a standard Archimedes 310, but comes with the software-based PC emulator and the latest version of MS-DOS, version 3.21. The machine will also work as a normal Archimedes.

This launch comes at a time when the education world is hotly debating the relative merits of MS-DOS, which is the standard micro operating system in business, and proprietary operating systems, particularly Acorn's.

Acorn has refused to be drawn into the argument. Michael Page, the company's communications manager, told *Acorn User*: 'There is some need for MS-DOS in parts of education. We provide a flexible architecture which can be adapted to various needs.'

Page: price dropped

On the price drop, Page claimed that the original figures were only ever tentative and that most of the units sold to date have gone to third party software developers for evalutation purposes.

Now that sales have started in earnest, Acorn has been able to fix the recommended retail price. By the same token, prices quoted for the 400 series are also subject to change.

The new prices for the 305 and 310 are £804 and and £890 for the base systems, rising to £1034 and £1121 for colour systems. The 310M costs £960 for a base system, £1018 with a monchrome monitor and £1190 for a colour system.

■ Arcs and the BBC micros can now be mixed with PCs on the same network. Acorn's new PC-EcoLink card is an internal board which interprets the PC's filing commands into a form which can be understood by Econet. Among other things, this means that PCs and Arcs can share data files for packages available on both machines, such as Grafox' *Logistix*. The card costs £344 (inc VAT).

As reported last month, the cost of developing the Archimedes series resulted in losses for Acorn over the first half of this year. However, the company's brokers, Philips and Drew, are predicting that 1988 will be a good year for Acorn. Next year will see the launch of the RISC-based workstations, and to fund this development Acorn may well make a share issue. This could effectively reduce Olivetti's holding in the company from 79 per cent to just over 50 per cent.

Sound of music on Micronet

Micronet is about to open a music section for Hybrid Music System owners. For a fee, subscribers will be able to download software for the Hybrid synthesiser and music editing systems.

Ian Burley, news editor of Micronet, said: 'We will be supporting the section for the Music 500 and 5000. It is being prepared right now and will be on-line soon.'

Hybrid users who do not have access to telesoftware can turn to *Amplines*, a bi-monthly disc-based magazine. Editor Kevin Doyle aims to provide a forum for news, information, music and programs written in Ample, the music language. A Music 500/5000 system is necessary to run the discs. Subscriptions are £5 plus a blank formatted 40/80-track disc from Amplines, 26 Arbor Lane, Winnersh, Berks.

Beebug C

Beebug C is a full implementation of the language C conforming to, and extending beyond the Kernighan and Ritchie standard. Beebug C produces fast compact code and supports floating point maths. A comprehensive set of library functions and macros are supplied on disc.

Features

- Runs on a standard 32K BBC model B, B+, Master 128 or Master Compact
- 40/80 Track DFS and ADFS compatible
- 6502 2nd processor compatible
- Support for Acorn operating system (vdu, osbyte, mode etc.)
- Powerful command line interpreter with over 20 commands & qualifiers
- Expandable run-time library on disc containing nearly 100 functions & macros
- Full macro-handling facilities
- Debugging facilities and helpful error messages
- C programs may be written using almost any text editor or word-processor such as View, Wordwise, InterWord etc.

Beebug C is supplied on 2 ROMs and a 40 or 80 track disc. The Master Compact version is supplied on one 3.5" disc.

price £59 inc VAT

The language of the eighties

"Beebug C is about five times faster at compilation than the Acornsoft version and produces code at a fraction the length."
MICRO USER

Technical Summary

Beebug C is a full implementation of the Kernighan & Ritchie standard. The following is a summary of the full specification.

Expressions: *, &, -, !, ~, ++, --, sizeof, ->, *, /, %, +, -, >>, <<, <, >, <=, >=, &, ^, |, &&, ||, ?:

Assignments: =, +=, -=, *=, /=, %=, >>=,<<=, &=, ^=, |=

Declarations: char (8 bits), int (16 bits), short (8 bits), long (32 bits), float (32 bits), double (32 bits), unsigned, void, auto, static, extern, typedef, struct, union (inc. bit fields)

Statements: if, while, do, for, switch, case, default, break, continue, return, goto

Preprocessors: #define, #undef, #redef, #include, #if, #ifdef, #ifndef, #else, #endif, #line etc.

Library: over 90 library functions, plus 12 header files: h.stdio, h.stdlib, h.string, h.call h.ctype, h.assert, h.float, h.limits, h.stdarg h.stddef, h.math, h.setjmp

Beebug C
Stand Alone Generator

An add-on to Beebug C which produces stand-alone code which will run on any BBC or Master computer (memory permitting). Supplied on a dual-format disc which also contains a number of trig functions.

Epnitex ready to go on line

The Epnitex viewdata system, first mentioned in *Acorn User* back in April, is finally ready to launch.

Although hailed as a rival to Prestel, the main market for Epnitex is large companies who

Epnitex: radiopager link

can use the system for in-house communications as well as a public display system.

To help attract the business user, Epnitex has teamed up with Mercury to offer a radiopaging service. For £150 a year, you're given Mercury's pen-style pager, which bleeps each time a new message arrives for you on the system. If you are online at the time a message also flashes on your screen.

Show launches

Several new products are to be launched at the Electron and BBC Micro User Show (Horticultural Hall, London November 13-15).

Watford Electronics will be showing a 30Mb hard disc, a front end system for the DFS and printer and disc sharers. The *Quest* range is being extended with a *Quest Paint* extension ROM and desktop publishing software.

Computer Concepts says it will finally have its word-processing and design packages for the Archimedes, although the company said that about the *Acorn User* show too.

Several games will be ready, including contract bridge in the form of *Black Queen* and a strategy game called *Bismarck*, both from BBC Soft.

Baker demands better use of school micros

By Bill Penfold

Education Secretary Kenneth Baker has ordered special attention be given to computers and information technology in the new 'national curriculum'.

The announcement follows an HMI report last summer criticising the 'inadequate' funding of high technology equipment and the 'disappointingly limited' use of micros.

The inspectors complained that the effective use of equipment across the curriculum is still rare.'

Mr Baker, in his drive to establish a national curriculum, has clearly taken note of the inspector's findings. At least two of the specialised working groups he has appointed to advise him have been instructed to carefully consider how new technology could and should influence the contents of the new curriculum.

As in the past, the HMI report claimed primary schools

Baker: 'themes and skills'

tended to make fuller use of equipment than secondary.

It stated 'computers were in use in a small proportion of classes' and examples of 'effective work' were mainly in primary schools.

However, Mr Baker has told the specialist groups advising on science and mathematics attainment targets and study programmes he wants particular attention given to the future use of classroom computers.

Spelling out the science working group's terms of reference, the Education Secretary said there were a number of important subjects, themes and skills which could be taught and developed through the foundation subjects.

'I look to you to consider the place of such aspects within the science curriculum,' he told group's chairman, Professor J J Thompson of Bath University's School of Education.

Mr Baker added he expected the group's study to include 'the practical use and application of computers and informational technology in control, simulation and data storage'.

Similar instructions have been given to the head of the maths group, Professor R Blin-Stoyle. Mr Baker added: 'You will need to consider carefully how new technology can and should influence the mathematics curriculum.'

Both groups will deliver interim reports to the Education Secretary in November and their final reports next summer.

Micronet aids Children in Need

It looks as though the electronic medium has finally come of age. Micronet is to be given equal ranking with radio in the BBC's forthcoming charity telethon for Children in Need.

Last year Micronet was stuck in a dressing room. This year, however, the company will be running eight terminals in its own booth, alongside the BBC local radio stations, in the main studio itself.

The Children in Need appeal happens on November 27 and, as always, will be hosted by Terry Wogan. Micronet will be interviewing the various celebrities who pass through the studio, and there will be an online auction of computer goods.

Terry Wogan hosts appeal

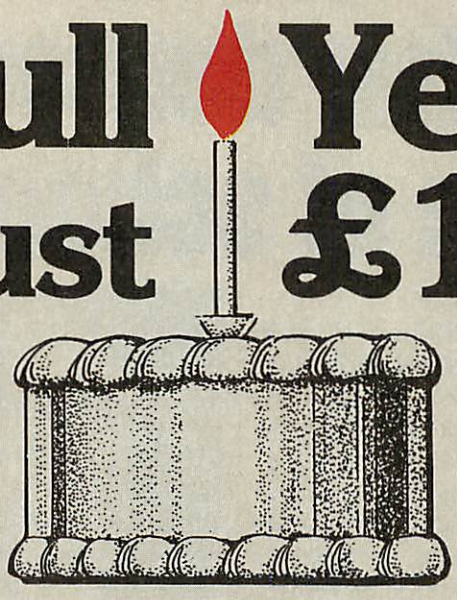

A list of the auction goods will be put up on Micronet a week before the event so that you can get your bids in early.

On the night of the show, bids will be taken right up to midnight. The auction section will be open to all Prestel users, not just Micronet subscribers. You can take part even if you don't have a Prestel account. Local Information Technology Centres (ITeCs) will stay open that night, permanently logged on to Prestel.

Last year, Micronet's efforts raised just over £46,000. This year it hopes to increase that to £50,000 or more.

If you're a company with products or services you could donate, Micronet would like to hear from you. Contact Encarnita Round or Sid Smith on 01-278 3143.

One Full Year for just £14.50

We are specialists on the BBC Micro, Master and Compact computers, established in April 1982 following the launch of the original BBC Micro.

For £14.50 we will provide you with:

Free access to our technical support team (by phone or letter), to give impartial advice and help on any computer, hardware or software problems that you may have.

72 page magazine mailed directly to you ten time a year. This will keep you up to date with news, reviews, hints and programs for your computer.

Quality, free programs for you to type in (also available on tape/disc) covering everything from printer buffers to windows & icons.

A swift mail order service for all your hardware & software needs at competitive prices, with a further 5% discount to you as a member.

A showroom to try out the latest peripherals and software with absolutely no obligation, and with knowledgable staff on hand.

Free personal adverts in the magazine to sell your unwanted kit. Second hand BBC micros. A trade-in scheme to upgrade to a Master or Archimedes.

Join 20,000 satisfied members!

All New Members Will Receive A Special Welcome Pack Including:

- **68 page booklet packed full of information and program listings**
- **Quick reference card to your computer**
- **Handy function key strip & screen planning sheets**
- **Plus a booklist, software catalogue, local user group list, magazine indexes etc.**
- **And of course your personal membership card & the latest magazine**

Start your year here!

Arc prize

The Archimedes has picked up its first award. The machine picked up the title of Home/Small Business Computer of the Year in the British Microcomputing Awards.

The Acorn micro beat the Amstrad 1512 PC clone and the Amiga 500, mainly because of its advanced technology, based on the RISC chip, and its ability to run MS-DOS as well as Acorn's own operating system.

File transfer made easy

The biggest problem with buying one of the latest incarnations of the BBC micro is transferring software from your old machine. Datathorn Systems has come up with one answer – a hardware link that uses the RS423 serial port to move the files.

The system, known as Comkord, consists of two ROM chips – one for each machine – containing the transfer software, plus the cable.

The two machines are connected directly, with the software taking the files from the disc or tape attached to one micro and moving them automatically to the storage system of the other machine.

Network users can already do this fairly easily, so Comkord is aimed mainly at educational and institutional users without networks. The outfit for two computers costs £52.

Boss beating

The latest business simulation from RBRC is *Beat the Boss*. It's nothing to do with managerial flagellation, but is in fact an educational program in which students have to run a fictitious company. The price is £34.50.

Win an Arc in our DTP competition

There's an Archimedes 305 plus £750-worth of software at stake in the Great Newspaper Competition run by *Acorn User* with AMS, producers of the *Stop Press* publishing package.

What you have to do is produce the front page and on inside page of an A3 tabloid newspaper (about the same size as *Today*) and a synopsis of the readership you are aiming at. It must be a national paper, but could be aimed at a large specialist group such as sportmen, children, or pensioners.

To make up a full A3 page, you will have to join several standard-sized pages together. The pages can be produced on any BBC-based hardware and software – except a laser printer. Editorial content will be as important as layout and design.

Entries must be in by February 29 1988, and there will be three age groups: under 14, 14-18 and over 18. Group entries by schools will be accepted.

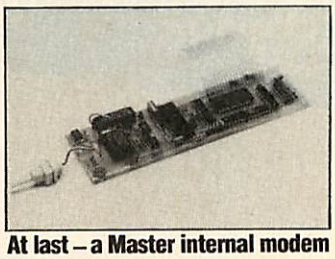

The rules were announced last month on page 17. If you missed them, send an SAE to: The Great Newspaper Competition, *Acorn User*, 20-26 Brunswick Place, London N1 6DJ.

Modem fits inside Master

After over a year of waiting, an internal modem has finally arrived for the Master – not from Pace, but from Beebug.

Pace started talking about an internal modem soon after the launch of the Master. The micro has a space between the main board and the power supply specially for such a device, although this is now taken up by the battery packs which replaced the original faulty lithium cell. The Master also has special connections on the board for a modem.

Pace ran into trouble with its design, and apparently lost interest, so it's been left to Beebug to fill the gap. The new modem, which should be available around now, offers both tone and pulse auto-dialling, auto-answer and call monitoring through the Master's internal loudspeaker.

At last – a Master internal modem

The modem will operate at 1200/75 and 300/300 baud, and costs £119 with software.

Arc graphics system

Millipede now has a version of its Prisma 3 professional graphics system running on the Archimedes.

The Prisma 3 was launched at the *Acorn User* show in August. It allows high speed, high resolution graphics and animation, with 256 colours on screen chosen from a palette of 17 million.

It will probably be next year before the Arc version is available, but a development system is already up and running and the company sees no problems in porting software over to the new machine.

The Archimedes version uses a special podule, and runs around 10 times faster than a Master-based system, with some commands being executed up to 50 times faster.

Acorn MD Brian Long resigns

Brian Long, managing director of Acorn for the last two years, has resigned unexpectedly.

The abruptness of Long's departure is underlined by the lack of a successor. In a terse press release on October 22, Acorn announced that Bruno Soggiu, the current company chairman, will take over his executive responsibilities.

The move came as a surprise to the industry. Although the interim financial results announced that month showed a £1.6m loss for Acorn, these were seen only as a slight setback, given the high expenditure on the Archimedes.

Long: unexpected decision

Son of Genie

Yet another version of *Genie* has popped up. Following the success of the original package and the Master cartridge version, Permanent Memory Systems has produced the *Genie Junior* package.

It has all the same pop-up features as the original – notepad, address book, diary, calculator and so on. The main difference is that it uses a disc for storing data instead of battery-packed RAM. At £25 it is also £55 cheaper.

The *Genie* code has been split between the disc and a single ROM chip. The program works with most disc filing systems. PMS says it will have hard disc, network and RAM disc versions ready soon.

***Genie:* now on disc**

Meanwhile, PMS has made the original *Genie* compatible with the Master 512. That's useful as *Sidekick*, the MS-DOS package which started the fashion for pop-up utilities, refuses to work with the 512.

Micro Librarian is boon for bookworms

Keeping track of library books is a logical use for a computer, and a program for doing just that has appeared.

Schools are the main target for *Micro Librarian*, from Arnold and Plant. The program is essentially a database with complex reporting facilities. It can tell you which books are out, when they're due back and how many times each title has been borrowed.

As it stands, the program is capable of handling 12,000 books and 2000 borrowers, which should be adequate for even the largest school libraries.

According to the company, *Micro Librarian* is not so much a computer program as 'an ongoing research scheme'. What that means is that the company will be issuing regular updates to the software, with extra features and compatibility with other filing systems.

The software is distributed by Arnold and Plant at a price of £96.60.

BBC user group in India

India has now another BBC micro user group. Calling itself Beebaid – no relation to the software package – the group already has around 100 members and hopes to increase this to 500 by the end of the year. It hopes to market hardware and software, both in India and the UK. Contact: Amit Jalan, 47 Gulmohur Colony, Indore, Madhya Pradesh, India.

3-D turtles set to take off

Logotron is using the BETT 88 show for the official launch of its 3-D Logo package. Previewed at the last *Acorn User* show, this extension module for Logotron Logo allows the turtle to be moved in three dimensions, and adds pitch, roll and yaw commands. The British Education and Training Technology Show is at the Barbican, from January 20-23.

THE COMMS COLUMN

■ Micronet has changed the status of its Bizznet pages, the section devoted to business topics. Now even non-Micronet Prestel subscribers can read them, although an additional time charge of 4p a minute will be levied. Micronet subscribers will also be charged (page 92 will show the charge), but then be given 100 per cent discount on their bills. Although such users are obviously known to the Prestel billing computer, it is far too difficult, it would seem, to not apply the original charge.

■ Micronet is also getting into teleconferencing, with closed chatlines managed by users planned to start shortly. Some will run through 80-column gateways and will be similar to traditional special interest groups or bulletin boards.

■ There are signs that the Archimedes is being taken seriously by people who previously showed little interest in Acorn machines. Brian Smith mailboxed me to say that he is the moderator of the CIX Archimedes conference. For those of you who don't know what CIX is, see below. The teleconference is for serious Archimedes users and will concentrate on programming topics.

■ The Compulink Information Exchange (CIX for short) is an interesting commercial bulletin board system running in Guildford, Surrey. It is modelled on the US BIX systems by *Byte* magazine, and hosts a number of interactive conferences – each with a 'moderator', a volunteer who trys to keep the conference going in the right direction.

The CIX system is predominantly used by owners of the major American micros such as Amigas and PC compatibles. This is an area of increasing interest to Master 512 owners, but now the ordinary BBC micro and the Archimedes are catered for too. The discussions are quite high-level and very different in tone from the usual forums like Micronet Chatlines.

CIX is run by Frank Thornley on (0483) 573338 (all speeds to 2400 baud, scrolling). You can have a look at the system for free, but membership is £3.50, plus a noticeable but not excessive time charge of £1.00 per hour.

■ A new goody from Telecom Gold, for anyone left who can still afford, it is personalised telex numbers. This is, like the file transfer software, initially only available to corporate members (the 'first-class compartment' of the service). The advantage of the facility, of course, is that you can pretend to your customers that you have a real telex machine instead of merely being one of many using the number 265871 MONREF G.

■ On-line multi-user games (MUGs) have sprung up all over the place in the last few years, but unlike the classic Essex University MUD, most games today carry hefty on-line charges. It's a refreshing change therefore to hear of a game that's completely free except for the cost of the phone call. Comms enthusiast Glen Collins tells me about Mirrorworld, a MUG run from deepest Surrey on various BBC micros which provides all the facilities of the subscription MUGs, plus extras such as a facility where you can chat to other callers outside of the game. Mirrorworld is on (0883) 844164.

Blunderbox roundup for 1987

For those of you who don't have all your back issues of *Acorn User* immediately to hand, here's a round up of the blunderboxes we've published in the last six months.

There were minor errors in the May issue's listings. First, Joe's Jottings listing 2 in the yellow pages, line 850 should read:

```
850 n=INT(2^(INSTR("
dsqcmsb",nm$)-1))
```

Also line 450 of the Convdat program should be modified to say:

```
450 dataline=790+50*
(char%-65)+10*L%
```

There was an error in the Joe's Jottings calculator listing in June's yellow pages. Line 320 should be:

```
320 IF k=1 PROCcl:EN
DPROC
```

This change allows the clear button on the calculator to work properly.

In July, the problem afflicted Copyfiles-II. There should have been a comma between the parenthesis and 'file$' in line 610:

```
610 DIM dir$(31),fil
e$(31)
```

And line 900 should read:

```
900 IF key$="1" THEN
system$(out)="ADFS":l
ink$="_"
```

August's Interrupting Basic program listing 1 has a checksum that is only correct for model B micros. If you had trouble running this listing, trying changing the following lines to:

```
420 checksum=&C0F0
510 checksum=&C582
600 checksum=&C0DC
3800 FOR loop%=code%
TO &ABC
```

In August's Hints & Tips the key sequence for condensed mode should be CTRL-B, CTRL-A, CTRL-O, CTRL-C.

There was a problem with one of the First Byte listings in the August issue too. Line 120 in Tessie Revivis' First Byte listing 3 should have read:

```
120 PRINT "Result is
";?first
```

Also, the September First Byte listing 3 contained an error. Line 160 should be:

```
160 PRINT ~?addr
```

and line 140 should be deleted. You should now find this prints out the call parameters properly.

October's Hints & Tips listing 1 is a little difficult to type in. In line 1300, the end of the line should read:

```
("SAVE "+name$+" 900 +
FF 400")
```

ADFS users will have to create a directory P before running this listing too. Listing 2, the spooled file replayer will work better in some cases if line 520 is replaced by:

```
520 JSR &FFEE
```

The checksum in line 780 then becomes &2E1E. The modified *PRINT command will now replay graphics files much better.

The checksum in October's Acorn Forum listing 5 applies only to the BBC model B. If you have a different computer, change line 1370 to say just '=TRUE'.

Hints & Tips listing 1 in the December issue was unreadable in some copies of the magazine. Line 80 should read:

```
80 FORN%=33TO255
```

And finally, there are two errors in the yellow pages for *this* month (that section of the magazine is printed in advance of the other parts). The checksums for Joe Telford's PACK and UNPACK programs should be corrected in the following way:

PACK program (Joe's Jottings listing 2)

```
1160 FOR I%=&900 TO &9B9
1190 IF P%<>23135 THEN P
RINT "Check listing":END
```

UNPACK program (Joe's Jottings listing 3)

```
980 FOR I%=&900 TO &99B
1010 IF P%<>18459 THEN P
RINT "Check listing":END
```

DISC TRANSFER SERVICE

Acorn User is proud to announce another service to readers. We are now able to transfer the contents of unprotected DFS or ADFS 5.25-inch discs on to 3.5-inch ADFS discs. The cost is £5, or just £3 if you send us a blank ADFS formatted 3.5-inch disc.

We are not, for obvious reasons, able to copy protected software. We are also unable to make more than one copy of each disc. The service is entirely confidential, although it is readers' own responsibility to ensure that they are not in breach of regulations on confidentiality and data protection.

Please include sturdy return packaging for both discs, plus postage, and ensure that all discs are clearly labelled with your name and address.

Acorn User cannot accept responsibility for loss or damage.

Competition winners

The copies of Firebird's *Sentinel* game from our June competition were won by: Mark Lambert of Washington, Tyne and Wear; A I Livingstone of Milngavie near Glasgow; Torfi Olafsson from Reykjavik, Iceland; Bong Ui Yi from Dubai; N M Mathau from Monmouth in Gwent; Hywell Steel of New Malden, Surrey; Jonatham Britton from Warrington; Francis McCaffery of West Calder, West Lothian; Mr A B Venham from Chichester, Sussex; Dominic Newman from Exmouth in Devon; Mr U J Spanner of Seaford, Sussex; Richard Koten from Harrow, Middlesex; Philip Smithson of Thetford, Norfolk; Craig Barrett of Hornchurch in Essex; Tim Ward from Boston in Lincolnshire; Andrew Eakins, Reiling Mill, Northumberland; Tang Kok Vai, Kowloon, Hong Kong; Vernieuwe Luc from Ostende, Beligum; Paui Mama, Middleton, Manchester and W Cheung from East Molesey in Surrey.

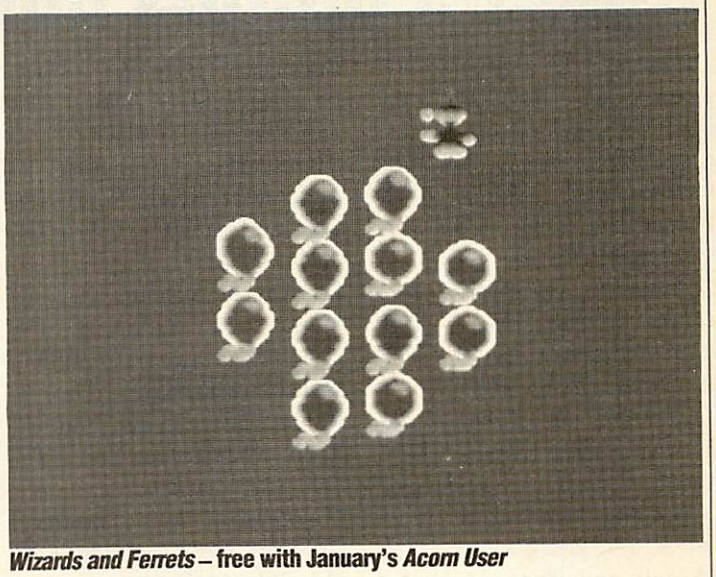

The five winners of our fifth anniversary competition run in the July issue won prize software bundles consisting of *AMX Stop Press*, Logotron Logo, Superior's *Elite*, the Island Logic Music System and *ViewSheet*. They were: J M Shepherd of Ilkley, West Yorkshire; S L Hart, Pinner, Middlesex; G Arnold of Tadworth in Surrey; Craig Dyke from Solihull, West Midlands; and Steve Tweedale, Bacup, Lancashire.

Alan Dunn from Liverpool, Merseyside and H Remegan from Delf in the Netherlands won copies of Computer Concept's *SpellMaster* in the August competition.

Finally, the two lucky winner of PMS' *Genie* package in our September number base competition were S Birch from the Wirral, Merseyside and K Padgett of Coltishall, Norwich, Norfolk. A consolation prize of an *Acorn User Portfolio* disc went to Ms L Sharp, who bravely hand delivered her entry on October 15 , the closing day of the competition, as violent storms swept over London and the south east.

All winners have already been informed by post.

Next month's issue

Wizards and Ferrets **– free with January's** ***Acorn User***

January's *Acorn User* is packed with features and listings to while away the dark winter nights and help you get through Christmas and the New Year.

Martin Phillips describes a mailmerge program for *Wordwise Plus*, to take the tedium out of writing all those thank you letters.

Communicate with your BBC micro using the television's remote control. Joe Telford shows how to interface the micro with an infra-red remote control handset.

And as its holiday time, we've got an infuriating machine code game *Wizards and Ferrets* for you to type in. Smooth sprite movement, a high score table and some clever programming techniques make this game the most playable yet.

And our education team look forward to the coming new term with a feature on computers in CDT teaching.

POST A PROBLEM

Acorn User has a guaranteed fast reply service for enquiries. Your answer will be returned within 10 working days for just £3 (includes VAT), or your money back.

Just write out your problem, fill in the coupon (right), and send both off to *Acorn User* with a stamped addressed envelope and cheque or postal order for £3. If you want recorded delivery add the cost of this on. Include as much detail as possible, and a disc or cassette if a program is involved, with enough space to record any corrected listing.

Please note: debugging readers' programs or those from other magazines is a complex task and we cannot guarantee to give a full solution. Unless the problem can be spotted quickly, the service will only be able to make general comments or suggest a strategy for the reader.

We will then answer the problem and return all material received – within a guaranteed 10 working days from receipt. If we fail to match this promise then your cheque or postal order will be returned with the answered question – you can't lose!

Arc art contest

Archimedes owners – can you do better than this? If you can draw a picture of your own using Clares' new Arc package, *Artisan*. *Acorn User* will publish the best picture we receive each month, and the artist will get a lockable box of 20 3.5-inch discs as a prize.

The best picture overall will be turned into a real painting by Clares' artist in residence, Jon Warmisham. The judging for this will be done by *Acorn User*'s editor, Tony Quinn, Jon Warmisham and Dave Clare.

Clares' *Artisan* is the first screen-art program for the Archimedes. If offers full control over all the Archimedes' graphics facilities.

Pictures can use up to 16 colours, which can be picked from any shade the Archimedes can produce.

There is a pixel editor and impressive move and copy facilities. These allow any shape to be dragged across the screen with the mouse. Any shape can be defined as a sprite, used as a brush for drawing, and even saved in a sprite file to use with other programs.

Your entries should be drawn using *Artisan*, and saved on 3.5-inch disc using the 'screensave' option. Send your entry to Clares' *Artisan* Competition, 98 Middlewich Road, Northwich, Cheshire CW9 7DA. If you want your disc returned, then enclose return packaging and stamps.

Can you do better than this with your Archimedes?

WATCHING YOUR BBC PROGRAMS ON TAXAN'S SUPERVISION 620 OR 625 IS A FEAST FOR THE EYES. BECAUSE THEY'RE PROFESSIONAL COLOUR MONITORS THEY GIVE YOU A BETTER QUALITY PICTURE THAN EITHER A TV OR MEDIUM RESOLUTION MONITOR. AND WITH THEIR SUPER HIGH CONTRAST TUBES (FOR SHARPER TEXT AND MORE VIVID COLOURS) AND FOUR SWITCHABLE COLOUR TEXT MODES, THEY MAKE EXCELLENT VIEWING. (HOWEVER IF YOU PREFER TO WATCH IN MONOCHROME ONLY, TAXAN HAVE A RANGE OF MONITORS - THE KX117, KX118 AND KX119). TAXAN ALSO OFFER TWO BBC COMPATIBLE DOT MATRIX PRINTERS, THE KP815 AND KP915. THEY'RE QUICK AND QUIET AND BOTH PROVIDE NEAR LETTER QUALITY. SO NOW YOU'VE SEEN OUR IMPROVEMENTS FOR THE BBC," GIVE US A RING. WE'D LOVE TO HEAR YOUR POINTS OF VIEW.

A BRITISH BROADCASTING CORPORATION MICROCOMPUTER

It operates at 4 million instructions per second.

It's the world's fastest microcomputer.

It has been voted the 1987 microcomputer of the year.†

†Home/Small Business Category of the British Microcomputing Awards.

Model shown here is the Archimedes 310 with colour monitor and includes Mouse.

- At an operating speed of 4 million instructions per second just about everything you do happens instantly. With this kind of power at your fingertips the advantages are enormous.
- Already Archimedes* has won the British Microcomputer of the Year award, a clear winner against the other two finalists, the Amstrad 1512* and the Amiga 500*
- In addition to BBC Basic V, high level languages such as 'C' and 'Pascal' can be used for specialist applications fully exploiting the computer's outstanding power, graphics and speed.
- The huge potential of Archimedes doesn't stop there. The 310M with its built-in PC emulator can run Lotus 1.2.3,* D BASE III,* MS-WORD,* and other popular business programs available under MS-DOS.*
- With prices starting at £749 exc. VAT for the 305 with mono monitor and rising to £1035 exc. VAT for the 310M with colour monitor, the Archimedes 300 series represents unparalleled value for a computer system of such capability.

Infallibility.

nfallibility] sic. *incapable of error, unfailing sure.*

There are very few articles of technology which are incapable of error and although many manufacturers strive for the ultimate pinnacle of excellence, they rarely succeed. Panasonic, however, are one of the few who have trodden an unfailing path of advancement and proceeded, sure in their convictions.

These convictions have produced a range of printers which have all the qualities that a fast moving world, and you in particular, require. Printers, from the sure footed Panasonic KXP-1595 to the lithe footed KXP-1081, have ensured that the Panasonic range has really earnt the accolade, infallible.

Trust Panasonic excellence, it's the nearest technology can get to infallibility.

▶ **PEP024**

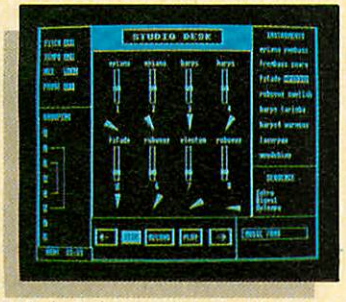

OVER 17000

visitors attended the 87 Acorn User Show. Most were amazed at the performance of the **MUSIC 87**. As a result we have been receiving hundreds of telephone calls from people wanting to know the differences and merits of the **MUSIC 87** synthesiser when compared to more expensive music synthesisers. Below is a table showing how the **MUSIC 87** compares to the Music 5000.*

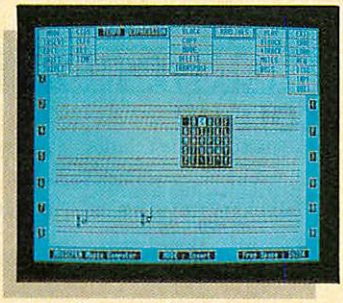

9 good reasons to buy the **MUSIC 87** rather than the Music 5000.*

FUNCTION	Music 5000	MUSIC 87
Mouse driven	✗	✓
2nd processor compatible	✗	✓
Light pen driven	✗	✓
Full 32k EPROM	✗	✓
Waveform designer as standard	✗	✓
Ability to bypass AMPLE	✗	✓
Graphic representation of waveforms, envelopes and score	✗	✓
Music printout as standard	✗	✓
Expensive	✓	✗

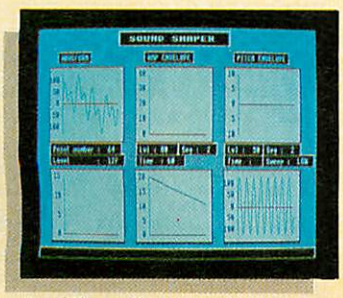

Price	Music 5000.*	**MUSIC 87**
	£161.00	**£79.95**

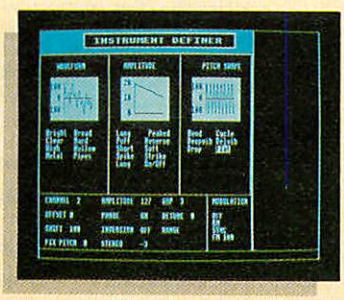

Studio Desk menu with mouse driven record, play, rewind options

Music Editor menu, light pen & mouse driven with complete menu options at top

Sound Shaper allowing you to create your own waveforms, envelopes, mouse, lightpen or keyboard driven

Instrument definer allows you to define your own instrument pitch, amplitude and wave forms

MUSIC 87 SYNTHESISER

MUSIC 87 software to upgrade your Music 500 or 5000 only **£39.95**

*Music 5000 is supplied by Hybrid Technology Limited

Archimedes

The ARCHIMEDES High Performance Computer Systems represent a considerable lead in performance, but how has this performance been put to use in the range of products?

The ARCHIMEDES range includes the 300 Series and the more sophisticated 400 Series.

All machines have features in common:

- **32 bit RISC technology;**
- **ergonomically styled in a 3 box presentation;**
- **'IBM enhanced' style keyboard with 3 button mouse;**
- **British Broadcasting Corporation Micro style operating system (ARTHUR);**
- **BB BASIC V;**
- **interfaces; printer, serial, monitor, stereo sound;**
- **ECONET plug-in option;**
- **a variety of podules can be fitted.**

THE 300 SERIES

The 300 Series, identified by its red function keys, consists of two models, ARCHIMEDES 305 with 0.5 Mbyte of RAM and ARCHIMEDES 310 with 1 Mbyte of RAM. These machines are the latest generation of British Broadcasting Corporation Micros. They offer, at low cost, all the basic features with expansion capabilities. Both machines have a 512 Kbyte ROM and a 1 Mbyte (unformatted) 3½" disc drive.

THE 400 SERIES

The more powerful 400 Series offers considerably increased expansion capabilities. These machines are the new range of Acorn Computers.

The ARCHIMEDES 410 has 1 Mbyte of RAM; 1 Mbyte (unformatted) 3½" disc drive; a hardware floating point unit option; a co-processor bus; a hard disc controller; a four socket back plane; 512 Kbytes of ROM.

At the top of the range is ARCHIMEDES 440. This machine possesses all the features of the 410 as standard, with the adoption of 4 Mbytes of RAM and a 20 Mbyte hard disc.

ARCHIMEDES is an open system and its flexibility is achieved by fitting any of the following podules (peripheral modules) via a back plane:

- **hard disc controller (300 Series only);**
- **ROM extension board;**
- **MIDI music interface;**
- **MS-DOS co-processor;**
- **SCSI;**
- **hardware floating point unit;**
- **Ethernet podule.**

Third party suppliers will be meeting other user requirements.

Now available: 0% Finance* on all Archimedes models from Peartree—call for details.

Link your BBC Micro to the outside world with...

MicroLink

Electronic mail – The cheapest and fastest form of communication possible. It costs the same to send a message to one mailbox as to 500!

Telex – Link up with 96,000 telex subscribers in the UK and 1.5 million worldwide. You can even send and receive telexes after office hours or while travelling.

Telemessages – Type in your message before 8pm and delivery is guaranteed by first post the next day (except Sunday), anywhere in the UK and USA.

Tele-booking – Reserve train and theatre tickets, check flight details worldwide, or order from a vast range of products – from flowers to floppy discs.

Telesoftware – Download directly into your BBC Micro any program from the ever-growing library now available on MicroLink – games, educational and utilities.

Company searches – Obtain facts about any British limited company in seconds, and fully analysed financial information on over 100,000 major companies.

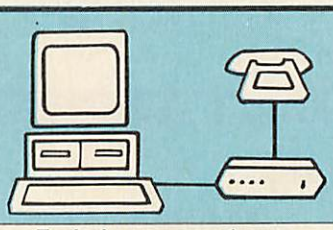

Translation – Access the biggest and most up-to-date multi-lingual dictionary in the world, with over 380,000 words.

News – Use the powerful search commands to pinpoint vital business information from the world's leading news services, newspapers and periodicals.

Radiopaging – If you also have a pocket radiopager you'll be alerted each time an urgent message arrives in your mailbox. So you're always in touch.

Gateways – Get through to New York in just five seconds – or key into the EEC computer in Luxembourg, which links you to 600 databases throughout Europe.

When you join MicroLink you've got the world of communications at your fingertips – 24 hours a day. You'll have immediate access to ALL the facilities offered by Telecom Gold ... and a great deal more besides.

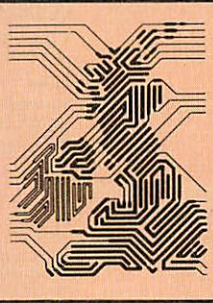

Typical comms packages	
A	*Watford: Apollo V21, V23 auto-dial, auto-answer modem + Comms rom (£82.25)*
B	*Dataphone: Demon V21, V23 auto-dial, auto-answer modem + Z-ROM + Disc-Connect software (£96.49)*
C	*Pace: Nightingale V21, V23 manual dial modem + Commstar II rom (£98.90)*
D	*Beebug: V21, V23 auto-dial, auto-answer modem + Comms rom (£103.99)*
E	*Miracle: WS4000 V21, V23 auto-dial, auto-answer modem + Dialup (£285.39)*

All you need – apart from your BBC Micro – is a modem, which plugs into your telephone wall socket, plus suitable communications software.

We have provided a list of possible combinations below, ranging from the very cheapest to ones which can automatically dial the MicroLink telephone number and connect you to the service – all you have to do is type in your personal security password.

Whichever equipment you use, you will be able to call MicroLink, open your mailbox, save to disc any messages waiting for you, and disconnect in as little as two minutes.

More than 90 per cent of subscribers can connect to the MicroLink computer at local call rates.

LETTERS

Write to Letters, Acorn User, 20-26 Brunswick Place, London N1 6DJ

MICROS IN MIDDLE SCHOOL

Sir, many congratulations on the Education section in *Acorn User*. I'm sure it has been useful, informative and interesting for many different age groups.

However, why not in future issues try to convince the governing bodies involved with secondary education that computers should not be something kept in a cupboard for GCSE computer studies students and teachers who want to practise arcade games? What about the children who move up from primary schools well advanced in computer literacy and eager to further their knowlege? Have they to wait with baited breath and fingers poised for the next three years, when they can finally choose computer studies as an exam option? By which time their interest may have been replaced with something else, such as vandalising telephone boxes!

Sad isn't it? Especially if the school is their only means of access to a computer and they are very keen.

Is it because the 'powers that be' regard time dreamed away in the pokey corners of the school library more important to our future generation than expanding on the thorough groundwork covered by many of our primary schools? Or is it because they lack the knowledge and numbers of qualified staff to cope with these computer 'whizz kids'?

Whatever the reason, I was wondering if *Acorn User* magazine or any of its readers could put forward any solution, for after all most schools own at least one of the mighty BBC machines. The end product could be that more students are interested in taking the GCSE course, and, more important, that more students pass.

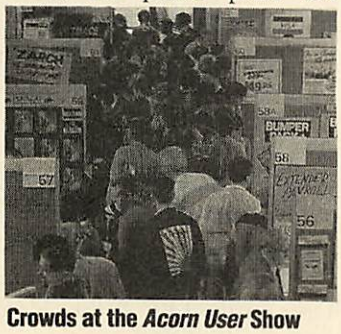

And you never know, perhaps fewer telephone boxes will be vandalised!

Mrs V Rowsell
Cleveland

TUNEFUL ADDRESSES

Sir, I was interested to read the short article on Hybrid Technology in your *Acorn User* Show guide in the August *AU*.

I wasn't able to visit the Show, so please print the addresses of Hybrid Music Systems (as I am interested in the new Music 4000 keyboard), U-Music and EMR.

Crowds at the *Acorn User* Show

It would be interesting if you could write an article on music systems for the BBC B.

N Desforges
Formby

Hybrid Music Systems are at Robert Davies Court, Nuffield Road, Cambridge. U-Music are based at 17 Parkfields, London SW15 and EMR can be contacted at 14 Mount Close, Wickford, Essex.

***Acorn User* looked in detail at MIDI systems in the July 1985 issue, and April 1987 was a special edition with features on micro music.**

PROCESSING POWER

Sir, In connection with First Byte in July, surely a 'macro' is the term for a single machine code instruction, not a loop in which assembly code is compiled, as you suggested.

The processor translates each macro-instruction into a series of micro-instructions which are stored in its control store.

It is interesting to note that as most cheap processors have only a small amount of control store, macro-instructions are limited by the number of micro-instructions they can be made up of. Hence no multiply instruction is available on the 6502 processor!

Colin Main
Harpenden

The difference between a micro-instruction and a macro-instruction sometimes is just as you describe. The 'machine code' of the processor is macro-code, and each macro-instruction is executed as a series of micro-code steps. This is why processors take several clock ticks to execute a single macro instruction – it's often one tick for each micro-instruction. The micro-code is stored as part of the processor. However, this is not true for the 6502 chip. This is a 'hard-wired' processor with no micro-code level. The machine code instructions control the chip directly. Micro-code is used on more complex chips like the 8086 or 68000. Interestingly, one of the reasons the ARM RISC chip is fast is that it too is 'hard-wired' – there is no micro-code. All its instructions are built directly into the hardware.

TEAR-BAR TIPS

Sir, I have an Epson LX80 which I use with my Electron. The tractor feed on this printer does not have a tear-bar and so I set about providing one as Bob Panting did in June 87's Hints & Tips.

Initially I also came up with a device not unlike Bob's, making use of a hacksaw blade. However this was not a total success and so it was back to the drawing board. My solution was to make a hardwood bar (mine is a piece of beech), 345mm long by 20mm wide by 10mm thick and simply stick it to either side of the top of the rear of the tractor feed using some small sticky pads. An improvement would be to use a bar made from clear perspex.

I do, of course, rest my fingers on the bar when tearing the paper against it, as this avoids having to keep replacing the sticky pads.

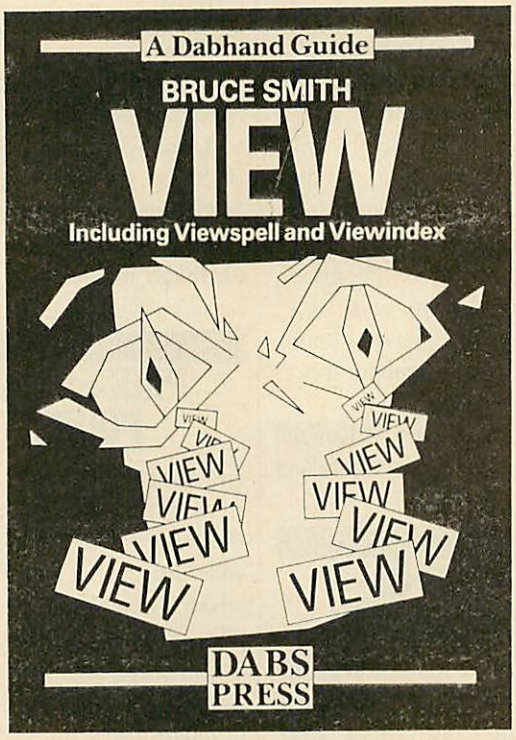

Thanks to you for a fine magazine and thanks to Acorn for a fine machine.

David C Barney
Retford

A DABHAND GUIDE

ACORN USER OFFER

View by Bruce Smith

This is the most comprehensive tutorial and reference guide written about the *View* wordprocessor. Beginner and advanced user alike will find it an invaluable and ever ready companion.

Bruce Smith has left no stone unturned and all aspects of wordprocessing are covered. In addition a suite of *View* utility programs are provided including *View Manager*, an extendable and very friendly file management program. Macros, page layout and printer drivers are revealed in Bruce's well-known relaxed style.

Covered in the 240-page book are: Command and Edit mode, rulers and margins, saving and loading text, !Boot files, markers, formatting and justification, search and replace, stored commands, printer drivers, handling long documents, hints and tips, *View Manager*, machine code utilities, *ViewSpell*, *ViewIndex* and *OverView*, utility programs, *View* version changes, quick reference guides, getting more memory, printer control codes, technical notes

All features in the book are applicable to *View* on the BBC B/B+, Master 128 and Compact, and Electron.

Please send me: . . . copies of *View: A Dabhand Guide* at £12.95 (including p&p)
. . . copies of book and 5.25-inch disc at £16.95 (£1.00 discount)
. . . copies of book and 3.5-inch disc at £17.95 (£2.00 discount)

I enclose a sterling cheque/PO payable to DABS PRESS for £..... (Outside UK add £2 p&p. Free p&p in UK)

THEME MUSIC

Sir, Here are a few tips for the use of the 'Theme' music editor from the April 1987 issue of *Acorn User*.

■ When composing, tabulate the notes so that the beats in each voice are displayed to line up vertically.

■ Don't leave envelopes out when first entering music. Even if they aren't the sounds you wanted, envelope markers can be used to locate yourself within the music.

■ To play just one voice or section through, position the cursor on the first note you want played, and keep your finger on Return until you want to stop playing. There might be a slight hitch in the timing when the next 'page' of music is drawn.

■ In the 'sustain' and 'slow fade' voices, where two notes the same pitch follow each other, it is often advisable to shorten the first note and insert a rest to prevent the notes being tied and sounding like a single note. For instance, a minim followed by a crotchet of the same pitch would become crotchet, dotted quaver, semiquaver rest, crotchet. This technique can also be used for elementary phrasing.

■ Use a vibrato sound occasionally to bring the melody out more strongly.

■ When paring down existing music to three voices, include the melody and the bass. Make the other channel a mixture of the rest of the parts, using the notes which give the music the most 'character' – usually accidental sharps, flats and naturals – and interesting pieces of timing (triplets, sequences of notes which give the music flow, etc).

■ If all else fails and a piece of music doesn't sound quite right, remember your ears are the best judge!

Andrew Love
Hertfordshire

Thanks for the tips, and for the example music included with the letter. *Acorn User* is planning another music issue early in 1988.

57 VARIETIES OF ADVERT

Sir, In answer to the dozens of your readers who have written, our advertising agency believes that the bar code surrounding our advertising decodes to a number representing Heinz tomato soup.

Sorry if you were expecting it to be something a little more profound!

Brian Beattie
Nebulae Computer Supplies

The cryptic advertisement

HITTING THE BAR CODES

Sir, I am in the process of setting up a business and intend using a BBC Master 128 for stock control, invoice printing, etc, enlisting the help of a bar code system for monitoring stock levels and sales trends.

The problem I seem to have at the moment is the apparent lack of information regarding bar codes and also business software that is suitable for bar code operation.

I am absolutely desperate for any information on this subject and would be extremely grateful for any advice you might possibly be able to give.

A F Richardson
Nottingham

The bar code reader once supplied by *Acorn User* is still manufactured and marketed by PMF, PO Box 5, Romford Essex RM3 7LH. This unit now contains updated software in a ROM. Further details on (04023) 48956.

STAR MISMATCH

Sir, I am writing in response to a letter from A Cox in the November issue, regarding Star printers and dumps.

The problem with the older Star printers, the Gemini and the SG10, is that they are not fully Epson-compatible in two ways. First, the code for quad density graphics on the Star is 122 whereas on the Epson it is 90, and second the finest line feed on the Star printers is 1/144th-inch as opposed to the Epson which is 1/216th-inch. This is why the gappy dump was produced, as the line feed size set in the dump was assumed to be in 216ths of an inch steps.

We have managed to modify dumps and NLQ ROMs to work on the early Star printers, but it is an awkward process.

A J Hodge
A&G Electronics

A modified Star screen dump is available for £5 on disc from A&G Electronics, 14 Hurstwood Avenue, Bexley, Kent DA5 3PH.

It all goes to show there are different degrees of Epson compatibility. If readers know of any other incompatibilities, where printers claim to be Epson-compatible but aren't, then let us know. We'll publish a summary in a future issue of *Acorn User*.

NO DUMMY AT SORTING

Sir, After refering to Joe Telford's October 1987 article on sorting, your readers will be familiar with the simple technique of interchanging two variables using a third as a temporary store. However, I thought your readers may be interested to know that in theory it is possible to perform the same process without the use of a dummy variable.

These two listings will interchange the variables A and B but without the use of an intermediate store:

```
100 A=A+B
110 B=B-A
120 A=A-B
```

```
100 A=A*B
110 B=A/B
120 A=A/B
```

Of course, these ideas might not be used in practice as rounding errors would sometimes produce the wrong results.

Peter McDonald
Scunthorpe

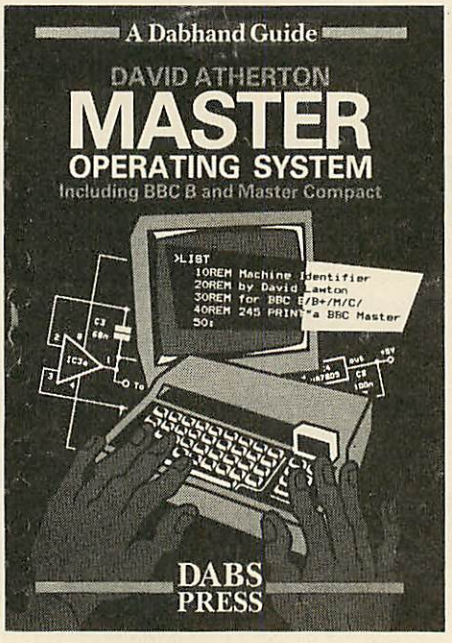

The first of Peter's ideas is quite often useful when memory is tight, though as he says the second is prone to rounding errors, and it can't be used with integer variables. Neither technique can be used with strings, of course, so they couldn't be used with Joe Telford's sorting programs. A further technique is sometimes used too:

```
100 X=5
110 Y=10
120 X=X EOR Y
130 Y=Y EOR X
140 X=X EOR Y
150 PRINT X, Y
```

DABHAND GUIDE

ACORN USER OFFER

Master operating system guide

This is the only advanced user guide for the Master 128, from Acorn expert David Atherton. It also covers the BBC model B+ and Master Compact, and there is much for the model B and Electron programmer. David Atherton has produced a definitive reference work which serious programmers cannot afford to be without.

The book covers all features of the Acorn MOS, including all 'star' commands on all models, 65C12 opcodes (including Rockwell additions), all new Osbyte, Osword and other system calls, sideways and shadow RAM programming, ROM service calls and header codes, never before published complete Tube documentation and full Master series filing system calls. There is also a complete list of differences between the various Acorn machines.

The book contains example programs such as a disc ID reader, an on-screen clock ROM, a shadow screen data buffer, and many others. An additional programs disc contains all the programs from the book, plus a full-feature memory editor and complete utility ROM!

Please send me:

DRAWING CONCLUSIONS

Sir, I would like to draw your readers' attention to a number of points raised by Peter Eggleton's article Better By Design in October's issue.

First, visual approaches to program design are particularly prone to getting 'out of step' with the source code of an evolving program, as designs must be re-drawn (usually by hand) as changes are made.

Second, the Jackson design technique is a *data driven* methodology (although this was not made apparent in the article). Any serious structured programming methodology must be concerned with the modelling of data structures and the operations that may be performed upon them. It is regrettable that this most fundamental aspect of program design was ignored.

Finally, using one box per source code statement forces the designer to make implementation decisions too early as levels of abstraction are lost.

Mr Eggleton is right when he says structured programming doesn't just mean not using GOTOs, but it doesn't just mean drawing boxes either! Readers interested in the design and implementation of 'real' programs may like to read *Software Engineering* by I Somerville (Addison-Wesley) or any of Wirth, Hoare or Dijkstra's excellent works.

Gary Philips
Solihull

RING IN THE NEW

Sir, With due respect to the Rev McMullon (Letters, October), I am somewhat tired of reading and hearing from people bemoaning the arrival of a company's new computer when it knocks a previous model out of the limelight.

As the proud owner of a trusty model B (issue 2, now nearing its sixth birthday) I welcome the Archimedes onto centre stage of the micro world, even though ownership of one at the current price is beyond my wildest dreams.

I would be pleased as Punch if Acorn would produce a co-processor for my Beeb, let alone the Reverend's Master. However, I cannot blame Acorn for investing in the design and production of the new systems architecture at the expense of outdated predecessors. The Master was a less formidable leap from the original BBC but many Beeb owners felt they needed one and took advantage of dealers' part-exchange offers to procure one. Already Masters have become part-exchangeable for Archimedes.

Rev McMullon's argument in favour of an ARM add-on for the Master seems to make good sense, but, to make an analogy, would he really expect Ford to produce a DIY kit to transform his old Anglia into a 4×4 Sierra Cosworth?

Anyway, I am confident that, like Fords, old Beebs will never die.

Peter Draper
Atherstone

COMPACT ABANDONED

Sir, It is less than a year since the Master Compact was introduced, yet I feel it has been abandoned by Acorn, software producers and *Acorn User*.

Logotron doesn't do *Xor* because it wouldn't sell enough copies, and the same is apparently true of *Aviator*.

Robert Miller's review of *Xor* in September rubs salt into the wounds. He doesn't even mention the fact the disc is not available for the Compact. And most of your own discs aren't in 3.5-inch format.

Come on you people: if you don't offer the goods, you won't sell any. Make 3.5-inch discs for the Compact (you can even charge a little more for them) and I think you'll find there is a demand.

David Raley
Essex

Readers can check which listings in *AU* are relevant to their micro by looking at the compatibility chart on the first yellow page (page 113) in each issue. Usually more than half the listings run on all the micros. Software reviews always state which micros a product works on.

Compact: Programs available

***Acorn User* put two *Gallery* discs on 3.5-inch discs (at the *same price* as 5.25-inch) and, guess what? – there was no demand! Also the 5.25-inch discs and ROMs have been checked on the Compact.**

***Acorn User's* publisher, Redwood, runs on a network of some 40 Compacts, which is the best way to ease disc transfer between formats.**

Finally, *Acorn User* will put your 5.25-inch discs (DFS or ADFS format) onto 3.5-inch ADFS (or vice versa). Send your disc plus a £5 cheque to Disc Transfer, *Acorn User*, 20-26 Brunswick Place, London N1 6DJ.

COMPACT TRANSFER

Sir, I have just upgraded from an Electron (with Plus 1) to a Master Compact, and wish to transfer my tapes to ADFS discs as used by the Compact. However, the Compact has no cassette interface, so how can I do it?

C J Stump
London

I'm afraid there is no simple way to do this; try to borrow an Electron Plus 3 – which includes a 3.5-inch disc drive – and transfer your tape programs to that. These discs can then be used directly in your Compact. Another way is to use a network.

Note that there was a series on the Compact running from the November 1986 to May 1987 issues. The January 1987 issue covered installing the RS232 port and transferring files that way.

SOLIDISK SOCIETY

Sir, I wish to inform your readership of a user group for Solidisk products called Solinet. It is run by Ken Hardacre at 13 St John Street, Bridlington, East Yorkshire YO16 5NL.

This group is impressive in it's friendliness and helpfulness – a stark contrast to Solidisk, always economical with useful advice in my experience. The group also produces a bi-monthly disc of help, letters, tips and programs.

I can thoroughly recommend this group as a refreshing contrast to the often disillusioning attitude Solidisk has towards its customers!

Ewen Sim
Royal Medical Society
Edinburgh

SUBSCRIPTION

AU OFFER

£10 saving on cassette subs

£35 guarantees that you receive 12 *Acorn User* monthly listings cassettes – a saving of over £10. Whether you use a BBC or an Electron our monthly listings cassettes are a must.

By taking a subscription to *Acorn User*'s monthly cassettes you will ensure delivery of 12 cassettes direct to your home. Each cassette contains the best programs, utilities, and graphics, which will entertain, inform and amuse you. Every cassette has a simple routine to transfer all programs to disc.

This unbeatable subscription offer is only available to UK subscribers, and we must receive your order before January 31st 1988, so hurry and make sure you post your subscription today!

HINTS & TIPS

Martin Phillips takes a nostalgic journey through some early programming lessons and re-introduces some useful listings for beginners

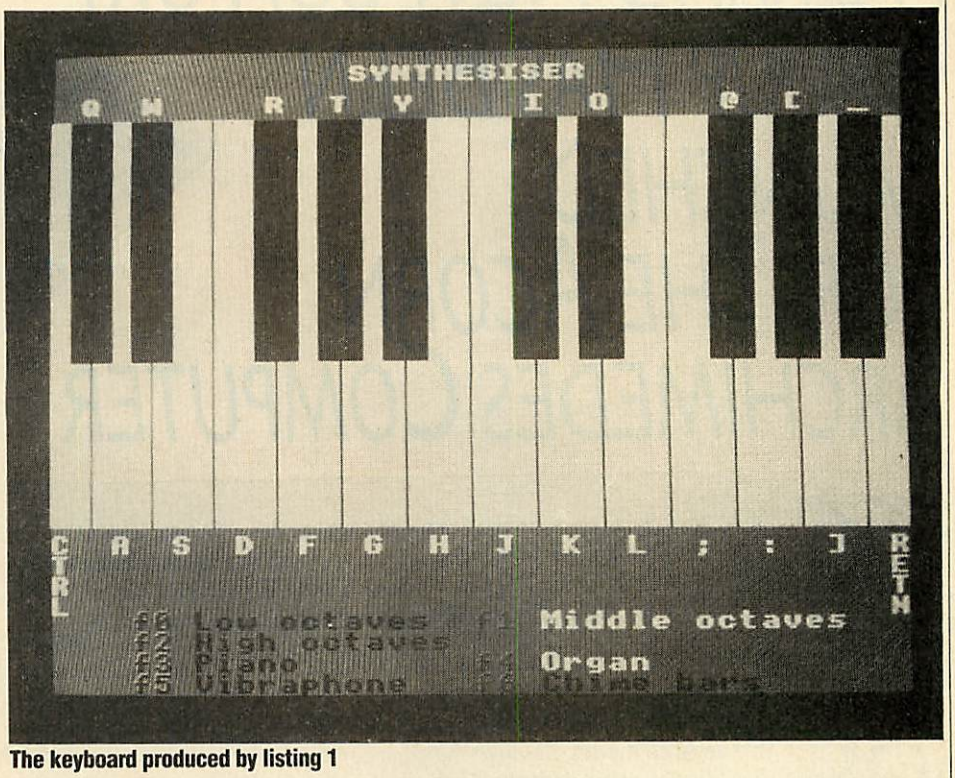

This is the 50th Hints & Tips that I have presented in *Acorn User*. To celebrate this I have included five short programs to while away the long winter nights.

I remember the fascination with my first computer when I typed in a series of short programs and managed to understand and alter them. Today there are very few of this sort of program published. Most authors have gone on to bigger things.

A look at many of the current computing books confirms this. Most go through the main Basic commands with examples simply to illustrate the point, or they give elaborate programs with several pages of listing but very scant descriptions.

In these five programs I have tried to include a variety of techniques which go beyond the basic commands to show how some interesting and useful effects can easily be created. For each program there is a line-by-line description of how the program works.

The programs will work on all machines, except the simple synthesiser, listing 1, where there is a separate version for the Electron (listing 2). Also, Electron owners will need to ignore a line in some of the programs; this is noted as appropriate in the program descriptions.

The keyboard produced by listing 1

A SIMPLE BBC MICRO SYNTHESISER

This program, listing 1 in the yellow pages, turns the computer into a synthesiser, capable of playing up to three notes at once. For this reason it will not work on the Electron, as the Electron does not have the same sound system as the BBC micro. Therefore there is a special version of this program for Electron owners (listing 2).

It is interesting to observe that most of the program is taken up with programming the screen display and with testing the keyboard for responses, together with the subsequent decoding, and that the parts of the program that actually make sounds are quite short.

Although they are complex to understand, once a knowledge of the SOUND and ENVELOPE statements has been acquired their use is quite elegant. The range of the synthesiser (BBC version) covers four octaves. These can be changed by using the function keys.

As there are physically only enough keys on the computer keyboard to cover two octaves, the synthesiser is set to use the middle two octaves. By using the function keys, the range can be changed so that the keyboard plays the lower or higher pitched octaves instead.

There are four voices programmed into the synthesiser: a piano, an organ, a vibraphone and chime bars. The sound produced bears a vague resemblance to these musical instruments.

Description of program

Lines 10-50 The normal *Acorn User* program heading. Leave these lines out if you wish, although it is often useful to know where the listing came from at a later date.

70 PROCinitialise sets up all the envelopes and then initialises any data required by the program.

80 PROCscreen draws the screen keyboard layout.

90 PROCprint displays the function key assignments on the screen and highlights the active keys.

100 PROCrun is the main procedure of the program.

130 Dimension arrays L%, M% and C%. L% stores the negative INKEY values for the keys needed, M% is a temporary array to check whether a key has been held down and C% is the sound channel number array.

140-170 Define the four envelopes.

180 The variable 'octave' determines which octave the keyboard plays in.

190 Switch off the cursor. This method of switching off the cursor will 'survive' the text cursor and the graphics cursor being joined using VDU 5.

210-280 Enter the negative INKEY values into array L% and put each element of array M% to 0. See the User Guides for a list of the negative INKEYs

320 Join the text and graphics cursors.

330 Change the background colour to blue.

340 Change the yellow to black.

350-370 Fill a rectangle in white. This uses a graphics window and clears the screen to white.

380-470 Draw in all the black notes on the white background. Uses the same technique for colouring rectangles. A data statement is used to give the horizontal

RISC USER

THE ARCHIMEDES MAGAZINE AND SUPPORT GROUP

A BRAND NEW SUPPORT GROUP HAS BEEN LAUNCHED FOR THE ACORN ARCHIMEDES COMPUTER

RISC USER is written by an experienced team of Archimedes enthusiasts with roots in education, home computing, and over 5 years experience with the BBC Model B and Master computers with BEEBUG magazine. So popular is BEEBUG that membership exceeds 20,000 worldwide.

RISC USER provides lively and informed coverage of what's happening in the world of the Archimedes. Reviews, hints, programs and articles are specifically written for the Archimedes, showing how to exploit the many features of this sophisticated computer. RISC USER has material of direct use to education, business, industry and home computing.

RISC USER includes a well balanced selection of the latest news from Acorn and other major suppliers, pre-release reviews of the latest software and peripherals, as well as editorial features, ideas, hints and tips, readers letters and much more. RISC USER is published 10 times a year and is only available on subscription.

RISC USER subscription also gives you free access to our technical support team who may be contacted by phone or letter. This team of experts will endeavour to resolve any software or hardware problems that you may have, and will also provide unbiased advice. RISC USER is also an Acorn appointed Archimedes Support & Service Centre should you need repairs etc.

Although the focal point of RISC USER is the Magazine, remember that you get far more than JUST a magazine when you subscribe. You become part of an organisation which has provided many years of support to micro computer users. Let us have the opportunity to help you make the most of your Archimedes.

The first issue of RISC USER included the following:
ARM ADFS Menu – a useful utility to access ADFS files & directories under mouse control, *Visual Effects* – some Basic routines to produce stunning effects, *Sound & Music* – how to use the sound system, *Off The Shelf* – reviews of products available now, *Acorn Hotline* – using aliases and details of the OS, *Archie's White Mouse* – the first in a series on Archimedes graphics, dozens of vital *Hints & Tips* and much, much more.

AU 12

start point of each of the five black keys in an octave.
490-530 Draw black lines to divide the white keys.
540-610 Label each key. Note that the spaces in these lines are critical for correct screen layout, as are the semi-colons in lines 590-610.
640 Print title.
690-730 The main loop of the program. It scans through each key in turn and calls up PROCsound if a new keypress is detected.
760 Filter out the four function keys that change the envelope.
770 Filter out the three function keys that change the octave range.
780 This procedure stops the note playing if the key is no longer being pressed.
800-820 The variable J% selects the appropriate sound channel.
860 Sound the note defined.
1060 This procedure prints the function key descriptions on the screen, colouring the key number in red and the description of its function in black. The keys that are actually in use are highlighted by having their function printed in white. This routine is accessed every time a function key is pressed.

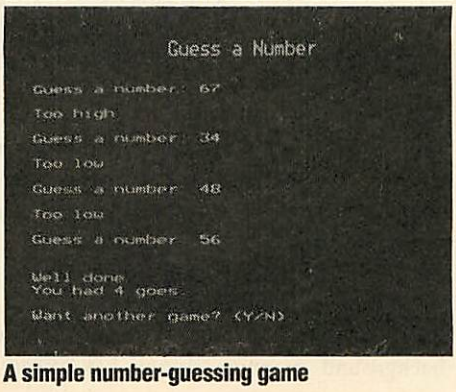

AN ELECTRON SYNTHESISER

Listing 2 is an Electron version of listing 1. The main differences are that only one note can be sounded at once and there is only one instrument, an electric organ. The pitch is changed by pressing the Shift key. On the screen is a display of a piano keyboard, with the Electron keyboard keys indicating the note. There is a short machine code routine to scan the keyboard and return the value of the key pressed. Using Basic for this is too slow and interferes with the sound produced.

Description of program

70 PROCinitialise sets up the envelope, and initialises the variables and the keyboard array.
80 PROCmachinecode is a short machine code routine to test if one of the selected keys has been pressed.
90 PROCscreen is the procedure to draw the piano keyboard screen display, which then remains static while the main loop of program is run.
100-120 The main loop of the program. It checks to see if a key has been pressed and sounds the appropriate note.
150 Envelope definition.
190 Switch cursor off.
200-250 Put the negative INKEY numbers into locations starting at &C80 so that the machine code keyboard scan routine can access them.
280-580 A two-pass assembler routine which will store the machine code at &C00. It scans the keys defined from locations &C80 onwards and returns the value in location &70. It uses Osbyte 129 (&81) which is equivalent to the Basic INKEY statement. The routine scans the negative INKEY numbers stored at locations &C80 onwards to check if it is one of the notes that has been pressed.
600-630 A routine to make the Electron pause for half a second.
660 Change background colour to blue.
670 Change colour 2 to black.
680-700 Define graphics window and clear screen to white.
710-800 Draw the black keys. The start and end co-ordinates are taken from the DATA statements.
810 Reset the graphics window to show the full screen area.
820-860 Draw in black lines in order to separate the keys.
870-920 Print legends on the screen. The spaces are critical in these two lines.
960 This is a check to see if the Shift key has been pressed. It reverses the action of the last Shift press.
970 Go to the keyboard scan routine.
980 Z% is the pitch parameter variation between the low octaves and the high octaves, selected by the Shift key
990 If a key has been pressed, then sound the note.

GUESS A NUMBER

A simple number-guessing game

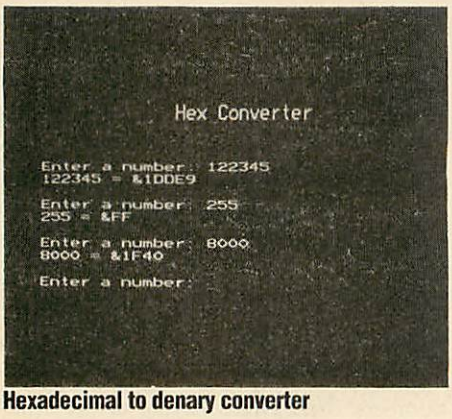

Listing 3 is the well-known game of guess a number. It was frequently seen in the early days of the Acorn Atom. It is a good program to experiment with – all sorts of frills can be added to it. The computer chooses a number randomly in the range one to 100. You have to guess the number that the computer has chosen.

Description of program

Line 60 Set the print formatting to 0. This means that no spaces are printed before numbers. This avoids having to use semi-colons before numeric variables in order not to have unsightly spaces.
80 A procedure to set up the screen display for the game.
90 The main procedure of the program.
100-120 A loop to give the chance of another game.
170-190 Print a double-height title and create a text window. Electron owners should ignore line 180.
230 Randomise the random number generator. If this is not done, each time the computer is switched on and this program loaded, exactly the same sequence of random numbers will be given. The internal clock is used to 'seed' the random number generator to avoid this.
240 Select a random number in the range 1 to 100. Store it in the variable 'number'.
250 The variable 'count' is used to store the number of tries taken.
260-310 Get a number and then check it against the chosen number. If it is not correct then jump to the appropriate procedure. This loop will repeat until the correct number is guessed.
320-330 Print a message and the number of tries taken.
360 A 'skeleton' procedure to indicate a low guess. A low sound is also produced. A refinement that could be made here is to link the pitch to the difference between the guess and the correct number.
410 A 'skeleton' procedure to indicate a high guess.

HEX TO DENARY CONVERTER

Listing 4 in the yellow pages is a short program to convert values from hexadecimal to denary or from denary to hexadecimal. If the number entered is preceded by the '&' sign to denote a hexadecimal number, then it is converted to denary,

Hexadecimal to denary converter

otherwise it is converted to hexadecimal. Thus there is no need to have to go to separate parts of the program, or to have to tell the program each time you enter a number which conversion to make – which can become very tedious.

This program also uses the micro's messages to detect when errors in number entries are made – numbers which are too big or non-hexadecimal characters. The program could be improved by the use of colours, say using different colours for hexadecimal or denary numbers. A printout can be obtained at any time by simply pressing CTRL-B and then Return when asked for a number. Similarly to abandon the printout simply press CTRL-C and then press Return.

Description of program

Line 60 Use mode 7 for simplicity.
70-80 Print the title in double height. Electron owners should either delete line 80, or use the double-height routine given in listing 5, and then change line 60 to MODE 4.
90 Set a text window so that the screen can scroll without wiping the title.
110-170 An infinite loop forming the main part of the program.
120-140 A routine to input a number. The routine checks to see that something has been entered.
150 Print an equals sign with a space at either side.
160 Check to see whether the number is hexadecimal. If so then go to the 'hex' routine to be converted, else go to the 'den' procedure to be converted.
210-230 The procedure to convert hexadecimal to denary. The EVAL function is used to do this.
250-270 The procedure to convert denary to hexadecimal. This looks complicated, but there is no simpler way.

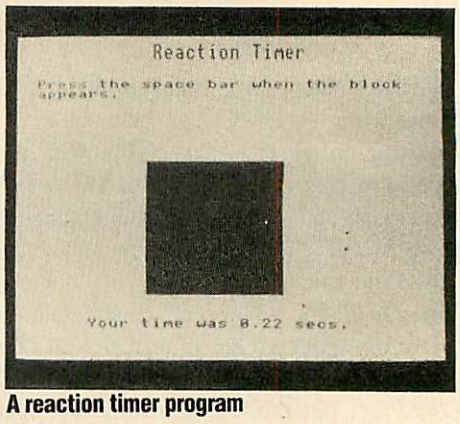

REACTION TIMER

This program, listing 5, tests your reaction time by displaying a red block on the screen and measuring the time before the space bar is pressed. The block appears with a random delay of between two and 12 seconds.

After the reaction time has been given, pressing the space bar again will clear the screen ready for another go. The program works in mode 1; the screen has a white background, with the title appearing in blue in double height.

Description of program

Lines 10-50 The normal *Acorn User* program heading. As usual, you can leave these lines out if you wish, although it is often useful to know where the listing came from at a later date.
60 DIM a block of memory nine bytes long. A value of eight is used as the computer starts counting at zero. This is needed for the double-height routine.
70 Set the screen to mode 1 to enable graphics and four colours to be used.
120 The procedure to set up the screen display for the program.
130 Set the background colour to white.
140 Change the normal drawing colour from white to blue.
150 Print the title in double height.
160-170 Print instructions. There are two spaces after the first set of speech marks to centre the text on the screen.
180 Define a text window so that the title and instructions are kept on the screen when the screen is cleared.
190 Switch off the cursor.
220 The main procedure of the program.
230 Change the graphics background colour to red. This forms part of the routine to produce a red square on the screen.
240-350 The main repeat loop of the program that will do the reaction time test. This is an infinite loop, because '0' in line 350 is always false.
250 Set the internal Basic timer to zero.
260 Set a random delay before the block is shown. The internal clock works in centiseconds (100ths of a second). There is a minimum delay of two seconds, and a further random delay of up to 10 seconds.
270 Define a graphics window.
280 Clear the graphics screen. As the background graphics colour has already been changed to red, the graphics window will clear to a red background, thereby giving a red square on the screen. This is the fastest and easiest way of producing a coloured block on the screen.
290 Clear the keyboard buffer.
300 Reset the internal timer to zero.
310 Wait for the space bar to be pressed.
320 Print out the elapsed time.
330 Wait until the space bar is pressed again before continuing. The use of the same key prevents cheating because holding down the space bar, or tapping rapidly, not only produces an amazing reaction time but also clears the message so quickly that the time cannot be read!
340 Clear the screen.
380 The procedure to print the title on the screen in double height.
390 This procedure uses an Osword call with A% set to 10. This obtains the character definition of a given character. It is given in the same form as that used for the user-defined characters. X% and Y% point to a parameter block (dimensioned at line 60). The first byte will hold the ASCII number of the character for which the definition is required. When the routine is called, the definition is returned in the next eight bytes of this parameter block.
420 When the definition has been obtained, each of the eight lines of the definition is printed twice. C$ is a string to print the first of the two newly defined characters, then move the cursor down a line and back a space before printing the second newly defined character.
430-500 A loop to get each character of the string in turn and print it.
440 Pick out one character from the string and put its ASCII value into the parameter block. Then the Osword call is made.
470-480 Program the two new characters.
490 Print the double-height character in the appropriate place.

A reaction timer program

CODE BREAKER

Listing 6 (right) is a graph drawing program. It's called a code breaker because the program looks at the frequency of letters in a piece of text, a common technique in breaking secret codes.

The program will ignore the case of each letter when graphing. Mistakes can be corrected using the delete key as normal. Once all the text has been entered, the graph is drawn by pressing the asterisk.

The graph is auto-scaling – that is, it looks for the largest column and then adjusts the graph accordingly so that this column is the full height of the graph. Once the graph has been printed, pressing the space bar will finish the program.

Description of program

Line 60 Dimension a store for the text. This has been set to 1000 characters. Also an array is dimensioned to hold the count for each letter.

70 Use mode 7 for entering the text.

80-120 The four main parts of the program. PROCscreen sets up the screen display for text entry. PROCinput inputs the sample text. PROCcollate goes through the text counting the occurrence of each letter. It then checks to find the greatest single count. This is needed for the auto-scaling part of the program. Finally, PROCgraph draws the graph.

130 Wait until the space bar is pressed.

180-190 Print the title in double height. Electron owners should either delete line 190, or use the double-height routine given in listing 1, then change line 70 to mode 4.

220 Define a text window, so that the screen can scroll without losing either the title or the instructions.

250 Inputs the text and stores it.

260 S% is used as the character counter.It not only indicates how long the text is, but also can be used to point to the next free point in the memory store.

270-330 A loop to input the text. It is terminated when either the memory limit is reached or an asterisk is pressed.

280 Get a character from the keyboard.

290 Print the character on the screen. This line is necessary because the GET statement does not 'echo' the keypress on the screen. The semi-colon prevents each character being printed on a new line.

300 If the key pressed is not the Delete key then store the character, and increment the counter by one.

310 If the key pressed is the Delete key then reduce the counter.

320 If the key pressed is the Return key, then move down one line.

330 Test for the store being full or the asterisk being pressed.

340 Give a beep.

380-420 A loop goes through the whole text, which is now stored in memory, a character at a time, to count the frequency of each letter.

390 The capital letters of the alphabet have ASCII codes of 65 onwards. For simplicity, in the rest of this routine it is easier to work with 'A' having a value of 1, hence 64 is subtracted from each ASCII value.

400 Check for a lower case letter, and if so reduce its value by 32 so that a lower case 'a' now has the same value as a capital 'A'.

410 If the character is a letter, then increment the appropriate letter count by one.

430-460 Check through each letter count to find the highest value. This is stored in the variable 'count', and will be needed for the auto-scaling part of the program.

490 The procedure to draw the graph.

510-520 Draw the two axes of the graph.

530 Join the text and graphics cursors. This is needed to be able to label the horizontal axis with the 26 letters of the alphabet in that they fill the whole of the axis.

540 Move the graphics origin.

550 Make the background colour to green.

560 Change the normal drawing colour (colour 3) to black.

570 Change colour 2 to blue.

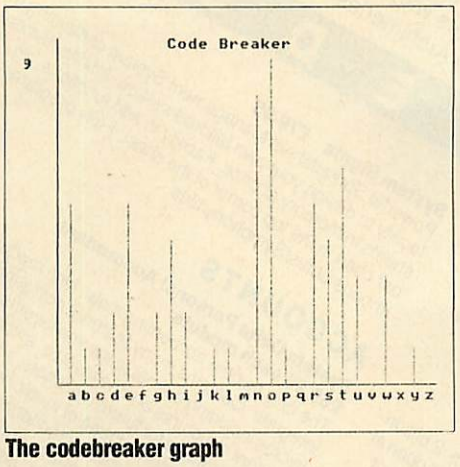

580-610 Label the horizontal axis.

620 Work out the scale.

630-640 Label the vertical axis with the maximum count value.

650 Change the drawing colour to blue.

660-690 Draw each bar of the graph.

The codebreaker graph

Build your own system...

with the Minerva SYSTEMS DELTA, GAMMA and SIGMA

Individual programs designed to integrate; use separately or link together to form a powerful business system. Systems Delta, Gamma and Sigma . . . designed by highly acclaimed professional programmers with proven ability on the BBC, now providing definitive software for the Archimedes.

ARCHIMEDES

DATABASES

DeltaBase £29.95
Extremely powerful yet simple to use general Database. Over 8000 records, 255 fields and 16 subsets. Pull down Help Screens. Various screen modes. Extensive single or multiple criteria searches, sorts and maths facilities. Restructuring records is easy. Imports data from Viewstore, Betabase, InterBase, Mini-Office, etc.

System DeltaPlus £69.95
Extensive Relational Database Management System. 2 billion records. 16 million fields. 24 million subsets. Infinite files open at once. Powerful WIMP database. Multiple user-definable print formats. Unrivalled, comprehensive maths, searches and sort. Multi-tasking. Mailing labels, etc. Extensive Reporter. Card copier. Fully programmable. Imports dBase files.

BUSINESS GRAPHICS

GammaPlot £34.95
Versatile Graphics program. Multiple charts on screen at any time including pie, scatter, line, hist, 3D. On-Screen editor for text presentation. Macros. Entry by keyboard or any Delta/Gamma File.

System GammaPlus £69.95
Graphics Management System. Multiple charts on screen at any time. Over 10 types available. Definable scaling and screen formats. Screen editor. Statistical analysis. 3-D charting. Macros. Fully programmable.

SPREADSHEETS

Sigma Sheet £49.95
Fast and extensive, yet simple to operate spreadsheet. Massive sheet size 2000 rows by 16000 columns. Full maths facilities with automatic relative or absolute reference adjustment.

System Sigma £79.95
Powerful Spreadsheet Management System containing the facility to design your own tailored system. Infinite number of sheets in memory at once. Facility to add functions, eg. draw a bar chart in the top corner of the sheet. Fully programmable. Imports Lotus/Symphony files.

ACCOUNTS

System Delta Personal Accountant £69.95 each module
The only flexible accounting suite. Use modules separately or integrate. Contains many features not found on other micros including definable invoice layouts, varied discount structures on one invoice, archive mail order customers for future mailshots, add new credit account at time of invoicing, selection of aged debtors/creditors or statements by various criteria, generates purchase orders, suggests stock levels, determines most profitable stock items, stock and sales graphs, numerous user-definable nominal accounts with unlimited bank accounts.
Order Processing/Invoicing, Sales Ledger, Stock Management, Purchase Ledger, Nominal Ledger.

Specialist Applications
Flexible specialist software available for School Administrator, Video Rental, Newsagent, Hotelier, Genealogy. (Timetabling coming early 1988)

GAMES

Minotaur Game £14.95
3 dimensional maze game. Use brains or force to kill the Minotaur.

BBC MICRO

System Delta with Card Index £64.95
Still the most comprehensive and flexible data management system on the BBC. 8160 records, 255 fields, 8000 characters per record. 8 subjects. Up to 5 files open at any time. Find any record in 3 seconds. Extensive single or multiple criteria searches, sorts and maths facilities. Multiple print formats. Default card. Card copier for transfer between files. Fully programmable relational system with over 150 commands available.

Mailshot, Reporter and Inter/View Link £19.95 each
Three versatile support programs for use with all System Delta files. Mailshot produces up to 4 across labels and links with wordprocessors for mail-merged documents. Reporter produces simple lists as well as fully definable reports including negative or positive columns, averages, totals, headings, sub and sub-sub-totals. Inter/View Link transfers data directly or as a result of any calculation including sum, average, count, etc.

System Delta Personal Accountant £45.95 each module (Nominal £55.95)
Five comprehensive accounting modules for use separately or as integrated suite. Many advanced features as listed above. Total flexibility allows customisation if required.
Order Processing/Invoicing, Sales Ledger, Stock Management, Purchase Ledger, Nominal Ledger

School Administrator £69.95
Pupil and staff records allow extra fields to be added if desired. Entry reports for examination boards. Form 7 DES statistics, etc.

Specialist Applications from £54.95
Comprehensive management programs for Hotelier, Video Rental and Newsagent.

System Gamma £49.95
The first Graphics Management System. Anyone can produce stunning graphics and charts easily from the menu driven GammaPlot supplied. Multiple charts on screen at any one time and in any position desired. On screen text editorial. Several fonts provided for variable text. Statistical analysis. Macro facility. Entry by keyboard or System Delta files. Fully programmable to create your own graphics programs.

FIRST BYTE

SIMPLE FILES

Any serious machine code programmer needs to be able to use filing systems. It could be easier than you think

Tessie Revivis

Over the past 12 months or so we have been looking at assembly language programming on the BBC, Master and Electron. Of course, we've really only just begun to scratch the surface, but if you have been following the articles you will have a sound knowledge of the basics.

We're not going to forget about machine code; instead we're going to turn our attention to specific areas which are of interest to all programmers, and apply the assembly language techniques we have learnt so far.

The sort of adverts and articles that are appearing in the pages of magazines are no longer restricted to games or character definers and the like. More important now are applications – programs with practical uses that you use to make life more manageable. To write virtually any application program, you will need to be capable of file handling, so the application can store its data. So the topic we'll be covering in the next couple of months is file handling.

Before going on to use files, we need to define exactly what a file is. For the purposes of this article we will assume that DFS is being used, although all the techniques used apply equally well to ADFS and NFS. If tape is being used, the operations that can be performed on a file are far more restricted, but the assembly language techniques are the same.

A file is a sequence of bytes on a disc. From the filing system's point of view these bytes are meaningless. It is up to the program using the file to interpret them. For example the bytes could be a word-processed text file or a list of names and addresses or a Basic program. The filing system can't tell the difference!

Each disc contains a list of all the files saved on it. This is called the catalogue. In addition to a file's name, the catalogue also contains other information about the file. The most important item stored is where on the disc to find the sequence of bytes that make up the file. This is seldom of any interest to a programmer. The other information held in the catalogue is:

- Load address. This address specifies where the file will be loaded into memory if *LOAD is used.
- Execution address. For a machine code program file, this is where the program starts from.
- Length. The size of the file in bytes.
- Attributes. Special information bytes – they show, for example, whether a file is 'locked'.

Accessing the contents of a file is possible in one of two ways: either all in one go or one byte at a time. Let's look at the byte by byte method first.

To use a file on a byte by byte basis, it is necessary to perform an operation known as 'opening the file'. When a file is opened, the filing system reads the file's catalogue information from the disc and stores it for future reference. When it does this, it creates what is called a 'channel' through which the program can access the file. The channel it uses is identified by a number called a 'handle'.

The handle number needs to be stored in a variable by the program. The handle in the number you put after Basic keywords like BPUT# and PRINT#. More than one channel can be opened, and each will have a different handle, so you must always use the right handle number for the appropriate file. The DFS allows up to five channels to be open at once.

When a file is opened, using the equivalent of OPENIN or OPENOUT the filing system also creates a pointer that initially indicates the first byte in the file, as shown in figure 1A. The pointer is a number and

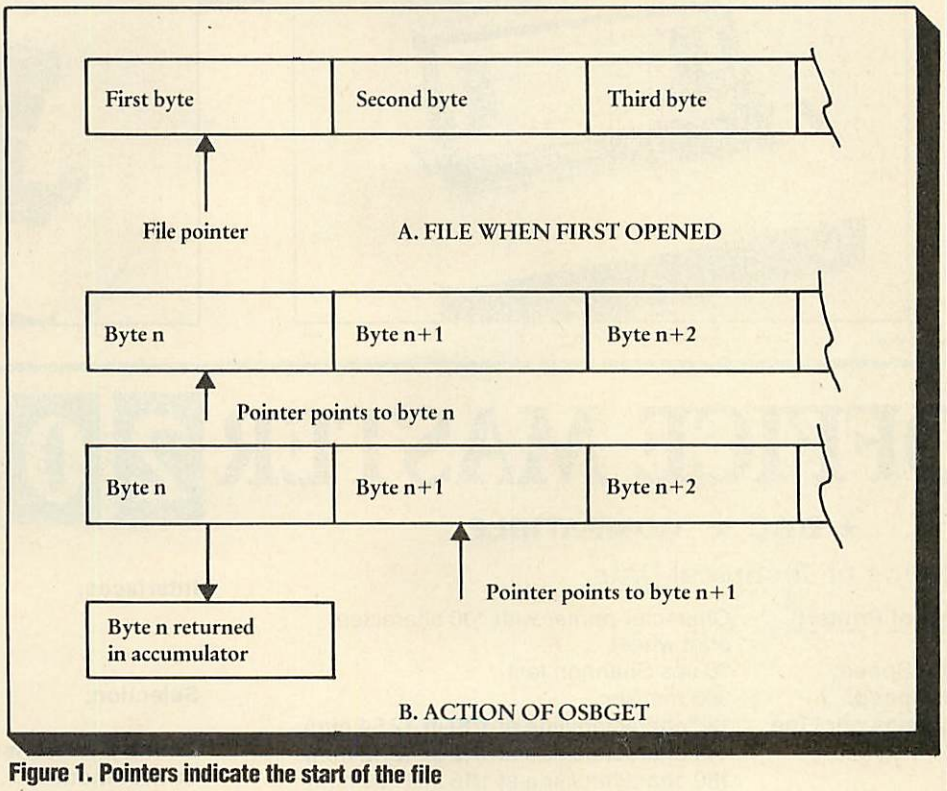

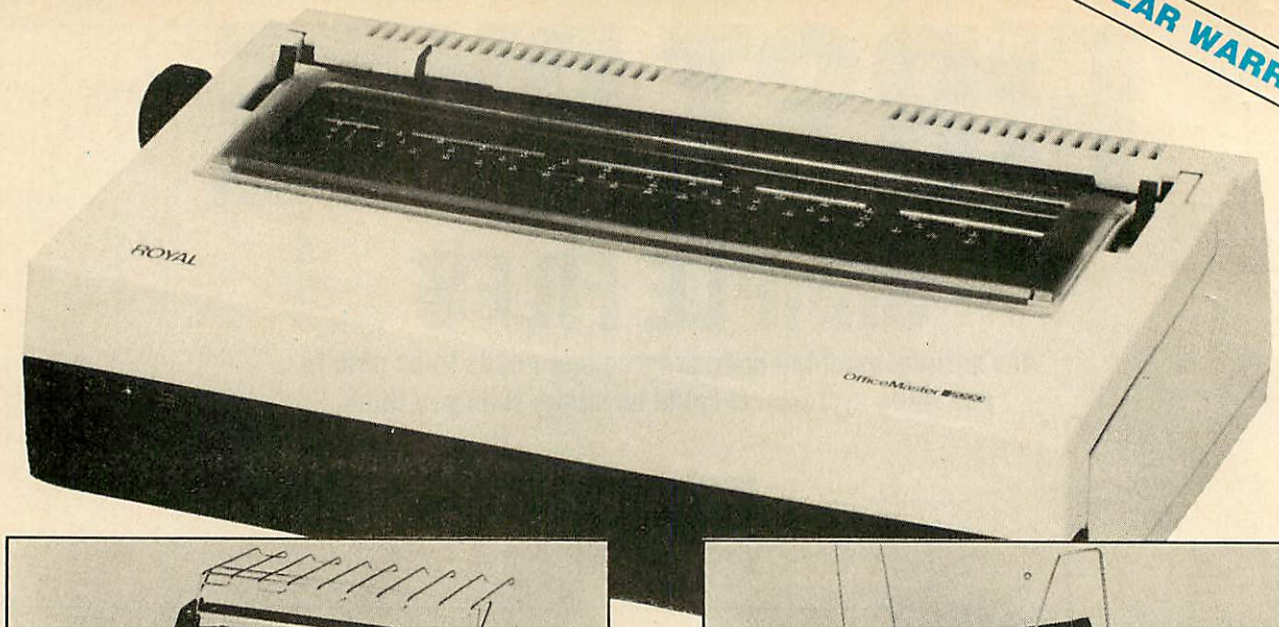

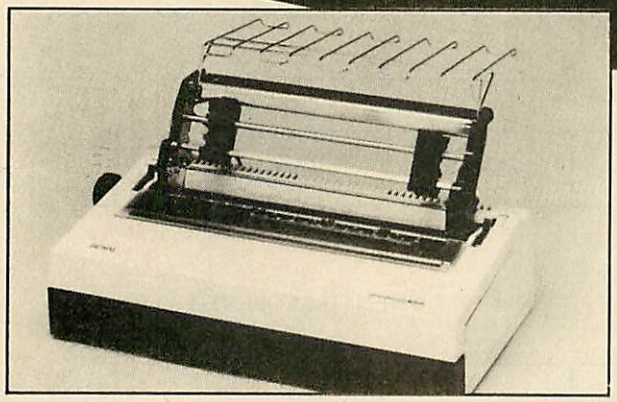

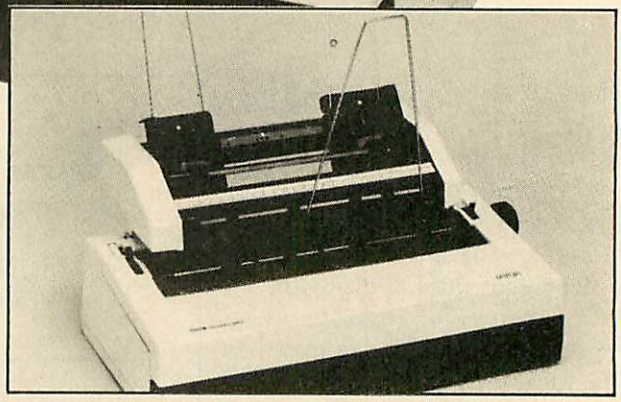

Figure 1. Pointers indicate the start of the file

Outline of Technical Data

Type of Printer:	Character printer with 100 characters print wheel
Print Speed:	20 cps Shannon text
Tab Speed:	300 mm/sec.
Columns per Line:	120 characters/line at 1/10 in. (2.54 mm) 144 characters/line at 1/12 in. (2.12 mm) 180 characters/line at 1/15 in. (1.69 mm) Proportional spacing Horizontal step 1/120 in. (0.21 mm)
Print Buffer:	1500 characters (bytes) Option: 3500 characters
Paper Passage:	360 mm
Print Width:	302 mm
Number of Copies:	4 (1 original and 3 copies)
Line Spacing:	Standard feed 1/6 in. (4.23 mm) programmable in basic steps of 1/48 in. (0.53 mm) or 1/96 in. (0.26 mm)
Form Length:	Standard values adjustable by BCD-switch over software the multiple of line spacing
Form Transport:	Friction roller with guide rolls Option: bidirectional endless form tractor single or double sheetfeeder
Ribbons:	Carbon 60.000 characters Multicarbon 200.000 characters Fabric 1 mil. characters
Keys for:	On/Off-line Line feed without form feed Top-set and paper insertion
LED-Display for:	Power on and on-line
Feedback:	End of ribbon Cover open Paper end in attachment (option)
Interfaces:	Serial V.24 (RS 232 C) Parallel Centronics-interface Multifunction-interface with serial or parallel interface
Selection:	Completely able for text processing (ESC-sequences)
Country Versions:	Max. 10 in one design
Environmental Conditions:	10—40 °C at a humidity of 10—90%
Noise:	≤ 57 dB (A)
Line Voltage:	120/220/240 V 47—63 Hz
Power Consumption:	Stand by approx. 15 W In operation approx. 40 W
Sizes:	145 mH x 500 mW x 310 mD
Weight:	10 kg

★ AGENTS REQUIRED ★

increases by one each time you read a byte from the file. This process is shown in figure 1B; as the byte is read, the pointer advances so it always points to the next byte to be read.

Writing to a file a byte at a time works in a similar way, except that the pointer now points to the next byte to be written. It is also possible to create a channel which can be read and written to simultaneously, using OPENUP for example. But this is a more advanced idea than we normally deal with here.

Having described how byte-accessed files work, we will now look at how to use them from assembly language. To make life easy and to allow programs to work with any filing system, all operations are done through a set of standard 'entry points' in the operating system. These routines work in a similar way to other OS routines such as Osbyte and Osword. There are five entry points which are relevant to byte access files. These are:

- Osfind – for opening/closing file channel
- Osargs – to read the file length and the pointer for a channel
- Osbput – write a byte to a file
- Osbget – read a byte from a file
- Osgbpb – transfer a whole lot of bytes to or from a file in one go

Let's look at each of these calls in turn. Osfind opens or closes a file. When opening, it causes the filing system to allocate a channel number to the file so that it can be accessed. When closing a file, it deallocates the channel number and tidies up the catalogue information. The call is issued from machine code using JSR &FFCE, and the value in the accumulator determines what operation is performed. Possible accumulator values are:

- &00 – Close a file channel.
- &40 – Open a file for reading from
- &80 – Open a file for writing to
- &C0 – Open a file for both reading from and writing to

The Osfile call needs to know which file on the disc is to be opened, so the name must be supplied in a parameter block. If a file is being opened, then the filename should be stored in memory somewhere, with a carriage return character (&0D) at the end. The X and Y registers should point to this name with the low byte of the address in X and the high byte in Y in the usual way.

After the call, the accumulator contains the channel number allocated by the filing system. If this value is zero it means that the file couldn't be opened, most likely because the file name was not found in the catalogue. Watch out though, because the Z flag need not be set even though A contains zero. So a simple BEQ instruction won't necessarily be enough to trap this error. You should use something like CMP #0 before testing the Z flag with BEQ.

When a file is closed, the routine is called with zero in the accumulator and the handle of the file to be closed in Y. A special case is when Y=0, which closes all open files. As an example the code below might be part of a program that used a file called 'DATA' on the disc:

JARGON BOX

Filing system: The built-in program which stores data on disc or cassette and retrieves and manipulates it.
Catalogue: Information on the disc telling the computer where the files are, how long they are, where in memory to load them and so on.
DFS: Disc Filing System, the standard Acorn filing system.
ADFS: Advanced Disc Filing System, a more sophisticated version used in the Master series and the Archimedes.
NFS: Network Filing System, the version for micros linked together and to a file server by Econet.
Call: Using a routine that is part of the built-in operating system from a program of your own.

```
LDA #&40
LDX #name MOD &100
LDY #name DIV &100
JSR &FFCE
CMP #0
BEQ error
STA handle
RTS
.name
EQUS "DATA"
EQUB 13
EQUB 0
```

This code opens the file. When we've finished with it, the file must then be closed like this:

```
LDA #0
LDY handle
JSR &FFCE
RTS
```

It is vital that all the open files are closed when you have finished with them. The filing system can only keep a few files open at once. For example, the Disc Filing System can maintain only five open files, and the limit with the Advanced Disc Filing System is 10. So if you keep opening files and not closing them, then you will eventually exceed this limit and get a 'Too many open' error. Even pressing Break doesn't necessarily close the files.

The code is the box closes the file whose file handle is loaded into the Y register. It is also possible to close all the open files at once, by loading Y with zero before calling Osfind. This is the equivalent of the Basic command CLOSE# 0. One major problem with this is that some versions of the Master 128 DFS have a bug associated with Osfind, which makes files the wrong length if they are closed in this way. To find out if your machine has the problem DFS, try the following:

```
F%=OPENOUT "TEST"
CLOSE# 0
```

Now type *INFO TEST. The third number displayed is the file length, and if this is not zero, then your DFS has the bug. It is possible to get a newer version of the DFS from Acorn that loads into sideways RAM and overcomes the bug.

Reading and writing to a file is achieved with the following calls. Osbget reads a byte from the channel in Y and puts it in the accumulator. It is called using JSR &FFD7. Osbput which is called as JSR &FFD4, writes the byte in the accumulator to the file whose handle is in Y.

A successful Osbget is signalled by the carry flag being cleared (C=0) when the routine returns. However, it is not possible to read past the end of a file as there is nothing to read. If you try, Osbget returns with the carry flag set (C=1). If this occurs, the contents of the accumulator should be ignored, and usually the file should be closed.

Listing 1 on the yellow pages illustrates accessing a file a byte at a time using these calls. It is a variation on the *DUMP command found in the DFS and in the Master operating system. After entering the listing, run it. If all is well, it will be assembled in the cassette buffer memory starting at location &900, then saved to disc as a program called 'DUMP'.

To use the program ensure that the OSDUMP file is on the disc and then enter *OSDUMP. You will be asked to enter a filename, then the file contents are printed out in hex and as ASCII characters.

Advanced Computer Products

ADVANCED DISC TOOLKIT
(01) /M/B/E/C **£34.50**

Any Acorn user including Master, BBC B+, Electron, DFS, 1770 DFS, ADFS, 2nd. & co-processors A.C.P.'s BEST SELLING product containing over 30 commands inc.:- powerful memory & disc editor, search memory/disc/basic, catalogue/unplug ROMS, load/run programs below page, automatic menu, file transfer (inc. locked cassette files), ADFS utils etc. etc. ("it's superb" Database Pubs. - "A top-class toolkit - I have no hesitation in recommending it" Acorn User Nov 86)
(16K EPROM & FULL MANUAL)

ADVANCED CONTROL PANEL
(20)/M/B/E/C **£34.50**

ACP is a front end control panel language providing a sophisticated yet friendly interface between user and computer for access to Languages. MOS functions and the users own file utility etc. Main features include pull down windows, simple to change MOS configure, floating point calculator, file manager,
SW ROM's facilities.
(16K EPROM & FULL MANUAL)

"It's very easy to create an entire customised front end for your own use."–*Acorn User, August 1987.*

"ACP is much better than any of the other front end systems I've seen."–*Acorn User, August 1987.*
"I can recommend it to anyone who wants easy access to the Electron's functions."–*Electron User, August 1987.*

ACPs main features are:-
- Pull down windows operate throughout
- Users can create their own windows
- Simple to change MOS-s configure options
- Easy entry to other languages
- Floating point calculator
- File manager
- Sideways ROMs utilities

ADVANCED ELECTRON DFS
(05) /E/ **£24.15**

Electron & Plus 3 users gain BBC compatibility by adding the Advanced Electron DFS (1770 DFS) this is the same disc filing system supplied with the BBC B+ Now you can produce and access (compatible) BBC disc based software A C P also supplies 5¼" disc drives to add to your Plus 3 (inc 2nd drive adaptor) "ACP has produced another superb ROM for the Electron" Electron User Feb '86
(supplied on 16K EPROM + DFS MANUAL)

ADVANCED DISC INVESTIGATOR
(06) /M/B/E/C **£28.75**

A very powerful Disc utility for standard & non-standard discs Backup most protected discs, edit any type of non-standard disc, check & repair faulty tracks, create new disc formats, copy 40track discs to 80track discs, verify two non-standard discs
("ADI features an extremely comprehensive sector editor, and one of the finest I've seen" Tubelink on Prestel)
(supplied on 16K EPROM + manual)

ADVANCED BATTERY BACKED RAM
(18) M/E/+1 **£39.99**

For Master and Electron users. A battery backed 32k RAM cartridge A.B.R. is a self contained cartridge containing two 16k pages of sideways RAM with a rechargeable battery back up. Each 16k page can be individually locked by software. Supplied with full software support, to include loading software, ROM save, advanced print buffer and a disc utility MAKEROM.
"It's a superb Addon and a must for all serious Electron Users".–*EU June*

ADVANCED PLUS 4
(08) /E + 1/ **£79.98**

DISC DRIVE COMPATIBILITY AT LONG LAST (Electron User June 86) this sums up AP4 & ACP s approach to producing products AP4 is a fully ACORN compatible disc I/face & will accept any standard drive inc PSU runs 1770 DFS (as fitted in the B + & Master) keeps page &Eøø utils in ROM & provides a spare rom socket ACP s PLUS 4 comes out on top I can recommend it to anyone (E U June 86)

AP4 should be considered the standard interface for the Electron (AU July 86)

AP4 100	£199.00 (inc VAT & Securicor delivery)
AP4 400	£229.00 (inc VAT & Securicor delivery)

ADVANCED PLUS 5
(09)/E + 1/ **£66.70**

A triple interface cartridge providing
1) a TUBE I/face allowing a second processor to be connected, increasing BOTH speed & memory (PAGE &8øø HIMEM &8øøø in all modes)
2) a 1 MHz BUS for control applications & prommers
3) the USER PORT for mouse and graphic devices
Also contains 2/3 ROM sockets and on board operating software for 2nd processor

ADVANCED 1770 DFS
3 versions ADM/C(11) – ADB(12) ADE (13) **£34.50**

ACP have totally re-written the Acorn 1770 DFS, enhancing existing features & adding new ones. The result is probably the fastest & most powerful disc filing system your computer could have. With the ability to operate in double density occupying both sides of a disc (640K) Automatic file relocation, improved file handling, 62 file catalogue and Sways RAM can be used as a fast RAM DISC
(16K EPROM + comprehensive manual)

ADVANCED ELECTRON DFS Eøø
(14) /E+ASR/ **£19.99**

An alternative to our AED(05) for Plus 3 and ASR users. This optional alternative DFS is designed for use in Sideways RAM (ASR) and allows the user to operate a disc filing system &Eøø when using the Plus 3 (in ADFS page would normally be &1Døø). The DFS is simply loaded using the software supplied with the ASR from disc. (optional upgrade for existing AED users £9.50 on return of original EPROM) (3½" ADFS disc + manual)

ADVANCED QTR MEG RAM £79.95
(19) (M(ADM)/E+1(ADE)

New Hi-tech cartridge (normal size) containing, an incredible 256k of S.ways RAM although it could be used to store many pages of s.ways ROM images its primary and best use is as a RAM Disc supported by our advanced 1770DFS (Master/ADM or Electron ADE are now upgraded to access the 256k in AQR. Now databases (i.e. Viewstore) can perform at breathtaking speed (over twice as fast as some other 1 Meg Silicon Discs) and animation with up to 25 screens becomes a reality. Price must reflect real value for money and package prices for AQR and ADM/E are available at £99.95 (existing ROMS may be upgraded when purchasing AQR for £5

ADVANCED PLUS 1
E **£49.95**

The Plus 1 is the main expansion for the Electron. It provides the Centronics parallel printer printer port, joystick interface and 2 cartridge slots into which go ROM cartridges including View, Viewsheet, Pascal, logo and our own popular AP4 disc upgrade.

COMING SOON

ADVANCED PLUS 6 . . . an internal ROM/RAM upgrade for the Advanced Plus 1. Will allow 6 ROMs or 4 ROMs and 2RAMs to be fitted. Battery backed RAM upgrade also planned.

HYBRID'S MUSIC 5000 . . . as widely used on the BBC computers has been fully versioned for the Electron & Plus 5.

PRICE BREAKTHROUGH

THE ADVANCED PLUS 3

Now you can turn your Electron (& +1) into a full disc system – no more waiting for tape loading or 'bad block'/'data ?' messages.

A.P.3. gives you . . .

1. A 1770 interface
2. 80 track 3.5" disc drive (320k capacity)
3. Separate PSU
4. Acorn ADFS
5. Welcome disc
6. Utilities
7. Full documentation

All the advantages of the original Plus 3 PLUS extra ROM socket and possible upgrade to A.P.4. from ACP.
All this without dramatically increasing the required desk space!
EXTRA BONUS
3 games on disc – SNAPPER – DRAUGHTS – REVERSI
COMPLETE PACKAGE ONLY £99+VAT (£113.85)
SPECIAL PACKAGE of Advanced Plus 1 & A.P.3. £149.95 inc.

NEW PRODUCT
ADFS VERSION 1.1 FOR THE ELECTRON

Suitable for existing Plus 3 or A.P.4 users. This new version has the software fixes for Zysyshelp, write protect disable & compaction. Also Winchester code has been replaced with 'patches' for future enhancements! 16k ROM & full documentation. £19.95+VAT (£22.55)

SUBSCRIPTIONS

AU OFFER

Save £29 on monthly discs

Yes! A subscription to *Acorn User*'s monthly discs for an unbeatable £40. A subscription to the monthly listings discs makes the perfect Christmas present for every BBC/Acorn micro user.

Now you can guarantee delivery of 12 issues of the best quality utilities, graphics and entertainment available for only £40, a saving of £29 on the normal price.

Over the year your disc collection will grow into a useful and comprehensive library of programs which you can refer to again and again.

Post your order today as this fantastic offer closes on January 31 1988. This offer is open to UK subscribers only.

Please start my subscription to *Acorn User*'s monthly listings discs with the _____ issue.

ACORN FORUM

This month readers have sent David Atherton advice on broken directories, quality printing and slow motion, to name but a few

£20

BROKEN DIRECTORY CURE

Here's a life saver of a program from Stephen Oxley of Benfleet, for when you get the dreaded ADFS error 'Broken directory'. The cycle number and identifier string ('Hugo') are stored twice in a directory, and it's usually these that go. As long as the two cycle numbers are the same, and the identifiers are there, the directory will catalogue properly again, and most or all of the files can be salvaged. If an individual file reference is dodgy, then you may still have problems, but this program can make the difference between losing a couple of files, and losing the whole disc.

Run listing 1 in the yellow pages, which saves a machine code program called FIX. Makes sure it puts FIX in the root directory, or perhaps the library directory. The machine code is assembled to run at &E00 for a Master 128, but can be assembled elsewhere, for a model B or B+ or a Master on which PAGE is not &E00, by altering the variable 'start$'.

If you lose a directory other than the root or directory where FIX itself is, you can run it by typing *FIX followed by the full directory path excluding '$', ie, *FIX LETTERS.NOV. If you've lost the root directory, you should *LOAD the program into memory from another disc, then *MOUNT the disc with the broken directory and call the address three bytes in from the start, for example CALL &E03. If you aren't in Basic then use *GO E03.

The program works by reading in sectors 2-6 (the root directory) from the disc and using this to work down the path, loading in further directories as it goes, until it finds the required directory. When that is loaded, it uses Osword &72 to read sectors directly; the sequence numbers, identifier string and directory title and name are checked for consistency, altered if necessary, and the sectors are then resaved to the disc.

The program will only fix directories broken by an inconsistency, and can't handle a disc corrupted magnetically, so the ADFS disc must still verify correctly for the program to work.

£10

NLQ AND ITALICS IN VIEW

```
Stuart has solved this by
writing his own View printer
driver which puts the LX80
into NLQ mode before
beginning printing, and then
switches underlining on and
off with highlight 1, and
italics on and off with
highlight 2. The italics
are printed in non-NLQ mode.
This is an example of what
it can do. It works with
most other Epson compatible
printers too. The printer
must be set up with
automatic line feed; this is
normally done using an
internal DIP switch.
```

Text printed with Stuart's routine

In his Business column in *Acorn User*, September 87, Graham Bell looked at the problems of italicising text with *View* family printer drivers. Stuart Rogers of Preston has an Epson LX80 and wanted to include italics in his NLQ output from *View*. But this printer, like many others, doesn't contain an italic version of the NLQ font, so the printer must revert to normal type first.

Stuart has solved this by writing his own *View* printer driver which puts the LX80 automatically into NLQ mode before printing, and then switches underlining on and off with highlight 1, and italics on and off with hightlight 2. In fact, highlight 2 switches off NLQ, switches on normal italics, and emphasised type. The next highlight 2 switches off emphasised type and italics and restores NLQ. The default USA font is used so # gets printed as #. The £ character is selected from the UK font automatically; the tilde character (~) is used as 'exact space'. In both cases, the characters used may be altered before assembly by substituting the correct codes in the listing. The driver has been carefully written to enable the user to easily edit these features.

Run the assembler source listing (yellow pages listing 2) and the file NLQ+IT will be created. The driver is loaded by typing PRINTER NLQ+IT from within *View*, *ViewSheet* or *ViewStore*.

If necessary, alter the sequences which began at 'setup' to contain the correct codes for your printer. In particular, the Kaga/Taxan and Canon printers select NLQ differently. Lables like 'ulon' and 'ital' make it obvious which codes are for what effect. Your code sequence can be of a different length, but must end with a -1, which is used as a terminator, not a print code. The listing is also a useful example of how to write a printer driver.

£5

PRESERVATION OF VARIABLES

Regular contributor Jonathan Temple has been writing large assembly language programs, and like everyone in that position, has found that the memory of his BBC micro is not up to it. There are many ways, some very technical, some rather obscure, to do multi-file assembly, but I think one of the neatest has got to be this one, which preserves the values of the all the variables to a file, which is then reloaded when the second program is installed. To see the effect in operation, run the first listing, listing 3, which creates a file on disc called VARS, and then run the second, listing 4, which reloads it and recovers the variables.

There are two limitations to the program – procedure names in one program must not be duplicated in the other, and LOMEM must be set to the same value at the start of each program. An example setting of LOMEM for Electron users is given in the listing. BBC owners can use mode 7 and set LOMEM to &7000. When reading the variables back in, all old variables are overwritten, so the recovery method in the second listing should be at the start of the main program, and not in a separate procedure.

How do the routines work? Well, BBC Basic stores variables and procedure names from LOMEM, or just above TOP for the current program. A two-byte 'free space' pointer at &0002 contains the address of the next free byte in memory, that is the address after the end of the last variable currently stored. The save routine uses LOMEM and this pointer to save the variables area.

Video Captioning & Graphics from only £1080

Package 780

MasterCaption software	£150
MasterLock genlock	£155
MasterBox Coder with 2 disc drives	£775
	£1080

Package 781

As Package 780	£1080
plus MasterRoller software	£125
MasterClock software	£90
Background colouriser, MasterPalette & Keyer fitted in MasterBox	£310
	£1605

Package 782

As Package 780 & 781	£1605
plus MasterPad software & tablet	£150
MasterFont software	£150
	£1905

The G2 Master Series of software and hardware enables any BBC Micro to be used as a cost-effective and flexible video caption generator, graphics system, script word processor and prompter, time code reader generator and VTR leader clock.

Ask for our information pack which explains all the options in full.

Graphics software:-

The MasterCaption is a sophisticated caption generator providing numerous features including variable size and shadow.

MasterPad is a simple but versatile graphics tablet which can be interfaced with MasterCaption.

The MasterFont caption system provides a range of 8 fonts and the ability to create custom fonts and logos.

The MasterRoller is a roller caption generator offering a choice of any 2 of 8 fonts and 7 colours.

The MasterClock is a VTR Leader Clock offering similar features to dedicated studio systems.

Software is available to run on most versions of Acorn Computers. All prices exc. VAT.

For further details contact:
G2 SYSTEMS – on 0252 712525, 5 Mead Lane, Farnham, Surrey GU9 7DY.

The mark "Master" applied to software and hardware for use with the BBC Micro is the Trade Mark of G2 SYSTEMS

At the same time, the variable map is saved. This extends from &482 to &4FF and contains pointers to the position of variables within the storage area. So that it can be saved together with the area in just one file, the map is copied to the memory just above the variable area. Reloading the variables consists of loading the file, then copying the map back to page &04.

£10

MASTER SLOW-MOTION ROM

Martin Hesketh of Ryton, Tyne and Wear, had submitted a neat program to slow down the execution of virtually all programs, including most commercial games on the Master 128. Run the assembler source listing, listing 5 in the yellow pages, and then press CTRL-Break. To test that the program is working, tap the '*' key on the numeric keypad. If everything has worked correctly, the cassette relay will click.

Once installed, the following numeric keypad keys control the speed of the computer: '*' and '#' switch the slow motion on and off respectively, and '–' and '+' control the speed of execution. To increase the speed of the program keep tapping the + key. Continually pressing the – key will slow the program more and more. Switching the slow motion on and off also clicks the cassette relay as an indication that it is working.

The program will continue to work after a soft reset, a hard reset, or a reset when the memory has been cleared (using *FX200,2). However, after any type of reset the slow motion will be switched off.

It works by using the Master ROM polling feature, where the operating system issues a service call to sideways ROMs every 10 milliseconds. The code picks this up, and pauses for a short time before returning. This means that, unlike many such programs, the interrupt vectors are unaffected, which is good, because many games where you would wish to use this feature use the interrupt vectors.

The program as it stands works only on a Master and Compact (except the cassette relay feature, of course). Interestingly though, the Electron also supports ROM polling, and the program could be converted to run on an Electron with sideways RAM quite easily. You would have to alter the key numbers, and convert the 65C02 opcodes back to 6502 equivalents.

£5

EXTENSIONS TO ADFS 'FIND'

C P Armstong from Wolverhampton has been using David Spencer's FIND utility from September's Forum, but says that when he forgets a file on his ADFS disc, he often forgets the precise name. He has therefore added a wildcard facility to the program. With this you can use a '*' in the name of the string to signify any number of characters (just like DFS). A single star will list every file on the disc, and so provides a 'CATALL' facility, like the program on the Master's Welcome disc. Mr Armstrong has found a problem with the variable 'fnd' being set to zero page location &AF, and has reassigned it to &90, in the Econet work space.

The modifications to the program are given as an additional listing. To use them, you should load in your original copy of FIND, which must not have been renumbered from the listing printed in September. Type in these new lines, which will overwrite some existing lines in the program. Even the lines containing just colons must be typed, as these have the effect of deleting the original lines. Then you can, if you wish, renumber the program, and re-run it. A new, slightly longer machine code file will result, which will accept the star as a wildcard.

Mr Armstrong also points out that it would be a good idea to run the program in sideways RAM or, for Master users, in the 12k of work space at &C000. I'll leave the organisation of that up to you!

That's all from Forum this month. See you all in 1988 – we'll be featuring lots more of your favourite material including plenty for the Archimedes, but we won't forget the trusty model B and Electron. A quick tip for all you new Archimedes owners from Chris Snee: if you decide to reset the CMOS RAM by pressing R during power-up, you will find that the monitor goes blank, as the system is defaulting to a multi-sync display. Don't worry; simply repeat the procedure, and the system will return itself to a standard monitor output.

Send your ideas to Acorn User, *20-26 Brunswick Place, London N1 6DJ.*

LEARN ARABIC WITH YOUR COMPUTER

مساعد تعليم العربيه

Convert your BBC or Master computer to bilingual operation with the BABEL Arabic Package.

Beautiful Arabic text. Software developed and tested in the classroom for 2 years to help the young read and understand Arabic.

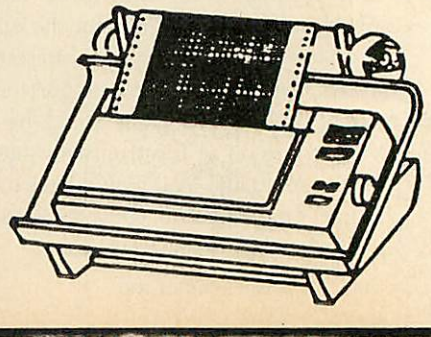

The package comprises: an easy to install EPROM, a set of keycap labels, an instruction booklet and a disc with absorbing programs: Mastering the Arabic alphabet, Arabic grammar exercisess, English to Arabic and Arabic to English translation exercises.

The BABEL Arabic Package £70 (d)
Other Arabic educational software for the converted micro; each disc £15 (d)
(Please specify 40 or 80 tracks). Send for more details.

Master Operating System (book by David Atherton) £12.95 (c)

PRINTER STAND

A new style printer stand with easy paper feed and paper seperation, provides complete access to paper. Can be used with both top and bottom paper feed. Very space efficient. £26 (b)

TECHNOMATIC

PRINTERS

EPSON LX800 £180 (a)

EPSON FX800
An enhanced version of FX85.
Call for details. £299 (a)

EPSON FX1000
An enhanced version of FX105.
Call for details. £405 (a)

EPSON EX800 £409 (a)

EPSON EX1000 £549 (a)

Colour option for EX800/EX1000. £59 (b)

EPSON LQ800 £399 (a)

EPSON LQ1000
As LQ800 but wider carriage for 136 columns. £529 (a)

TAXAN KP815
Enhanced KP810 with 160cps and full IBM compatibility. £269 (a)

TAXAN KP915
Enhanced KP910 with 180cps and full IBM compatibility. £369 (a)

National Panasonic KXP1081
Now supplied with a BBC printer lead and our WYSIWYG Rom. This rom provides one of the most powerful and versatile printer drivers for WP and BASIC. (see description elsewhere in the directory) £149 (a)

STAR NL 10 (Parallel Interface) £190 (a)

STAR NL 10 (Serial Interface) £219 (a)

INTEGREX Multicolour Inkjet printer.
Ideally suited for high res colour VDU screen dumps. Quiteness & consistent output are major characteristics. £549 (a)
BBC Screen dump for Integrex. £15 (d)

BROTHER HR20
8K buffer standard expandable to 16K. Parallel & Serial ports as standard. £349 (a)

NAT PANASONIC KX P3131
Daisy wheel printer with 38K buffer, 17 cps, bi-directional, parallel interface £249 (a)

JUKI 6100 Daisy wheel printer
15 cps, 2K buffer, switchable 10/12/15 cpi proportional spacing, underlining. Parallel interface. £295 (a)

Parallel Printer Lead (1.2m) £5 (d)

MODEMS

All modems listed below will be supplied with BBC Publications ModemMaster comms package and a BBC data lead.

MIRACLE WS4000 V21/23 £135 (b)
MIRACLE WS3000 V21/23 £244 (b)
MIRACLE WS3000 V22 £409 (b)
MIRACLE WS3000 V22 bis £537 (b)
(All modems are BABT approved)
BBC Data Cable for WS3000/4000 £7 (d)
MIRACLE WS2000V21/23 & BELL stds £92 (c)
WS2000 Auto Dial Card £27 (d)
WS2000 Auto Answer Card £27 (d)
WS2000 SK1 Kit £5 (d)
WS2000 User Port Lead £5 (d)

TIME WARP

Real Time Clock. Plugs into the user port, battery back up as standard, includes manual, demo software including a diary/planner application program £29 (d)

PLOTTERS

Hitachi 672XD A3 4 Colour HPGL (variety of pens available) £465 (a)
Plotmate A4S £282 (a)
Plotmate A3M £431 (a)
Larger Plotters available. Please enquire.

PRINTER SHARERS & BUFFERS

TSB256 Printer Sharer Buffer
Provides a massive buffer size of 256K and connects three computers to one printer. Autoswitching between computers, facility to print copies. £189 (b)

BUFFALO PB Buffer
Parallel buffer for internal fitting to most Epson printers. Simple to instal.
PB128 (128K) £89 (c)

PERIPHERAL & COMPUTER SHARERS
High quality switches to allow the user to switch between computers, printers, modems etc. Fully shielded metal cases. all lines fully switched.

	Parallel		Serial
2 Computers to 1 Printer 36v36-2	£25(c)	25v25-2	£25(c)
3 Computers to 1 Printer 36v36-3	£39(c)	25v25-3	£39(c)
4 Computers to 1 Printer 36v36-4	£45(c)	25v25-4	£45(c)
2 Computers 2 Printers X-over 36v36-x	£49(c)	25v25-x	£49(c)
BBC Cable set 3 to 1 (1m ea)	£24(c)		
BBC Cable set 4 to 1 (1m ea)	£30(c)		

BBC Computer Sharer: TCS26
1 computer to 2 printers fitted with BBC cable £17 (c)

Paper & Labels
Plain fanfold paper with microperforation:
2000 sheets 9½ × 11" £12 (£3.50)
2000 sheets 14½ × 11" £18.50 (£4.50)
1500 sheets A4 90gsm £18.00 (£4.00)

Labels/1000
Single Row 3½ × 1 7/16" £5 (d)
Triple Row 2 7/16" × 1 7/16" £5 (d)

PROGRAMMING ACCESSORIES/SOFTWARE

Compatible with B, B+ and Master

EpromRyter (Epromer II)
Eprom Ryter is compatible with BBC Master only. See page 7. £119 (b)
Upgrade of Epromer II to Eprom Ryter (Please return your Epromer II) £49 (b)

EPROMER II £89 (b)

MPROMER £49 (c)

META ASSEMBLER £145 (b)

PORTAL EPROM EMULATOR 512K £245(b)

TEAM Disassembler £145 (b)

EPROM ERASERS
UV1B 6 eproms, safety cutout £47 (b)
UV1T 6 eproms, timer, safety cutout £59 (b)

MONITORS

BBC lead incl with all monitors

MICROVITEC 14" RGB Monitors
Please specify plastic or metal case.

Microvitec 1431
Standard Resolution 453 pixels £179 (a)

Microvitec 1431AP
As 1431 + composite video and sound input £199 (a)

Microvitec 1451
Medium Resolution 653 pixels £225 (a)

Microvitec 1451AP
As 1451 + composite video and sound input £255 (a)

Microvitec 1441
High Resolution 895 pixels £359 (a)

Philips 14" RGB
Med Res, high contrast screen, TTL/ Linear Input, Mono/Colour Switch Sound Input. Seperate controls for brillance and contrast. £195 (a)

Microvitec 20" RGB/PAL/ Audio Monitors

Microvitec 2030CS
Standard Resolution RGB/Comp Video £380 (a)

Microvitec 2040CS
High Resolution RGB/Comp Video £685 (a)

TOUCHTEC-501
Brings genuine touch screen operation on metal cased Microvitec monitors, incl utilities disc with starter and development programs £239 (b)

TAXAN SUPER VISION 620
12" Hi Res/Hi Contrast
Option to switch to green/amber
BBC/IBM Compatible £269 (a)

TAXAN SUPER VISION 625
12" Super Hi Res and contrast RGB Monitor with option to switch to mono BBC/IBM compatible. £319 (a)

12" MONOCHROME MONITORS

TAXAN KX 117
Hi Res green etched screen £85 (a)

TAXAN KX 118
Hi Res Long Persistence (P39) £90 (a)

WYSIWYG PLUS

WYSIWYG PLUS is a printer and screen utility for Wordwise Plus, View, Interword, and Basic users, supplied on a 16K Eprom. To obtain a particular printer effect, such as enlarged text, it used to be necessary to discover the appropriate 'printer control code' from your manual and incorporate it into your text. Secondly, you had to print several trial copies in order to position the effect correctly in relation to the rest of your text.

WYSIWYG PLUS simplifies this trial and error approach using easily remembered *commands. For example, *ENLARGED not only selects enlarged text on your printer, but uniquely shows you double width characters on your screen, even from within Wordwise Plus!

WYSIWYG PLUS incorporates a logo editor. Just draw your design on screen using the arrow keys, and save the results. Use the *GRAPHICS command to incorporate your design anywhere in your text; position and see your design in your text before faithfully reproducing a hard copy.

There is also special help for daisy wheel users. The *WHEEL command will prompt you to change daisy wheels whenever a change in type style is about to occur.

WYSIWYG PLUS is designed to work with the following systems:

BBC Model B
BBC Model B+
BBC Master 128
BBC Compact
6502 Second processor,
Turbo coprocessor
All printers (Except lasers)

WYSIWYG PLUS workspace is relocatable.

WINDOWMATIC

All users of Acorn's VIEWSHEET speadsheet program will be aware of its powerful windowing facility which allows the screen and/or printer to be configured in up to 10 seperate windows taken from anywhere in the sheet. They will also be painfully aware of how difficult and time consuming it is to set up a required display. Although VIEWSHEET allows configurations to be saved to the media, it does not have provision for deciphering them.

WINDOWMATIC has been produced with the intention of rectifying these shortcomings and to bring out the very best from VIEWSHEET.

WINDOWMATIC provides a quick and easy way to configure screen and printer allowing complicated documents and reports to be set up much more easily. It displays complete text information on all 20 windows and accurate graphic representation of the screen and printer output.

The package includes a screen dump routine for Epson printers and allows use of other printer dump packages.

WINDOWMATIC is compatible with BBC Master and BBC B+. A 6502 2nd processor must be fitted to a model B to run Windowmatic. Windowmatic is fully compatible with Turbo and 6502 2nd processor.

The program is supplied on disc with a comprehensive manual.

VU-TYPE

Do you have finger trouble when typing?
Do your letters look like this?

Dear Sor,
I wuold like to .....

then you need:

VU-type, a complete touch typing program produced by BBC/Pitman.

It allows you to learn at your own pace and has a wide range of exercises. Screen displays show the keys you have pressed and it will report on your speed and accuracy.

Supplied on a 40T Disc with a manual.

Available at a special price of £7.50(d)
instead of the usual £15. Offer valid while stocks last

EDUCATIONAL/FUN SOFTWARE BUNDLE

Wordmover
Wordplay
Pantry Antics
Drawstick
Locomotion

These programs are supplied from the BBC Publications Educational Software range and will be supplied on a 5.25'' disc for BBC Master, B+ and B and on a 3.5'' disc for the Compact.

5.25'' Disc £17.50(d)
3.5'' Disc £18.50(d)
(Normal RRP over £40)

NOVACAD

Computer Aided Draughting for the BBC Micro

"Novacad can drive a plotter to provide drawings of a high quality... Novacad is excellent. It is flexible, genuinely easy to operate without much practice, and a pleasure to use." **Beebug December 1986**

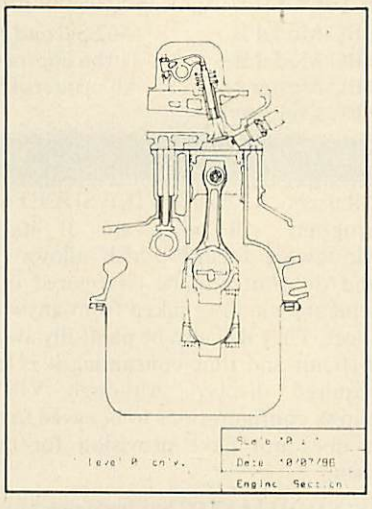

"Novacad is a professional package, well worth the £90 for the ROM and disc and is expandable to suit your own particular requirements. I would have no reservations if I heard Novacad called, "the best on the market"." **A&B Computing August 1986**

A sophisticated CAD package with unique facilities which are generally confined to the professional CAD packages costing thousands of pounds.

NOVACAD is being used in widely differing fields ranging from leading British industries for producing engineering drawings to Accountants' offices for producing flow charts. Architects, engineers, plumbers, kitchen planners and many other professions requiring easy to use facilities for producing professional quality output are making extensive use of NOVACAD's unique features. NOVACAD is proving to be a invaluable teaching aid in technical schools and colleges simply because of the ease with which it can be used.

NOVACAD'S MAJOR FEATURES

* Simple and easy to use with logical command sequence.
* A large drawing area (approx 15 screens).
* The ability to create complex icons (upto 500 lines instead of the usual 15 to 20 pixels), store them in a library and recall them at different scales and orientations.
* A zoom facility allowing magnification of up to 20 times to insert finer details.
* Block copy of shapes on the screen for repetitive use.
* Text entry at any 90° orientation at any position on the screen.
* Create multi layer drawing with 8 levels available.
* Full compatibility with the BBC range with minimal hardware requirements yet having the capability of exploiting the potential of the extra shadow memory or the second processor's memory and speed.
* Printer routine for Epson 80 and 136 column printers.
* A unique optional facility to output to any BBC compatible plotter.
* Cursor control from keyboard, tracker ball or mouse.

NOVACAD is compatible with all BBC models fitted with Acorn DFS. It has minimum hardware requirements of a single drive and a Epson compatible printer to get started though NOVACAD will utilise fully a dual drive system and 6502 2nd processor or the shadow ram on the B+ series. To obtain high quality drawings we recommend a BBC compatible plotter and our plotter driver generator.

With basic BBC B, NOVACAD operates in mode 4 allowing use of any 2 colours. With shadow memory of the BBC+ or the Master, it can also operate in mode 0 for higher resolution or mode 1 for allowing use of any 4 colours, and it will provide additional user memory for more complex drawings.

6502 second processor or the Turbo on the Master will also increase the drawing speed considerably.

NEW REDUCED PRICE

£49(d)

Plotter Driver Generator £15(d)

OPTIONAL EXTRAS

Plotter driver generator is available as an optional extra to configure a plotter routine for any BBC compatible plotter. Pre-configured programs for the popular plotters like **Epson HI 80, Hitachi 672, Plotmate, Penman** and **HP GL.** This program allows the drawing to be scaled to the maximum plotter size thus enabling drawing of A2 and A3 sizes to be produced with equal ease. The zoom facility will enable inaccuracies of drawing on the screen to be eliminated.

EpromRyter

***Highly sophisticated & Advanced Programmer**

***Handles all current 1 rail Eproms**

***State of the Art Programming Algorithms**

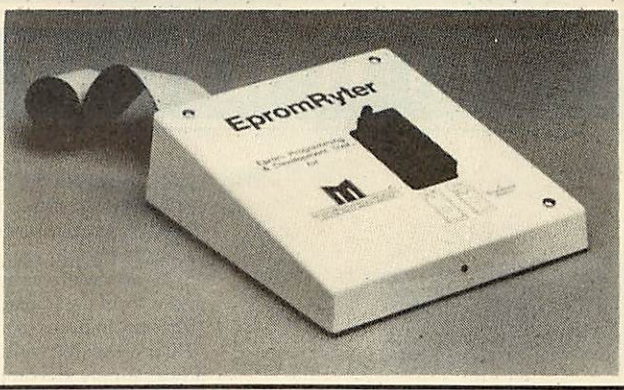

EpromRyter is a powerful eprom programmer designed for use with the BBC Master Computer. It takes full advantage of the latest developments in the eprom technology and the extra facilities on the Master to provide fast, simple and efficient programming and editing facilities.

The software is totally menu driven and on screen help messages make the programming simple for both specialists and novices alike.

The EPROMRYTER interfaces with the Master through 1 MHz bus. It is mains powered with its own psu. 3M Textool zif socket has been fitted to ensure consistent and reliable service over long periods.

The single rail eproms handled by the EpromRyter are:

- 2716 2732 2764 27128 27256 27512 27513 27011 2516 2532 2564 (NMOS & CMOS)
- One time eproms P27XXX, 87CXXX etc.
- Also A suffix eproms such as 27XXXA

The main features of the programming software are:

- Device, function and voltage selection from the computer keyboard.
- Continuous display of the options selected.
- All eproms upto 27512 (64K) programmed in single pass.
- Automatic Intelligent identifier support for eproms able to respond.
- Selectable programming voltage 25/21/12.5V
- 3 programming methods: Normal, Intelligent & Pulse (30 sec for a 27128).
- Serial port protocols supported incl Intel Hex & Motorola S.
- DFS, NFS, ADFS and Rom Filing System Supported.
- BASIC/Machine Code programming using RFS.
- Powerful editor with input in HEX or ASCII. * Full editable 64K file.
- Block move of data within the address range.
- User can select any section of the eprom from single byte to the full address range to blank check/burn/verify. Facility to program single bytes makes program development/amendment simpler.
- Multiple loading for ROM Filing System

Some of the above features apply to Master Computers only

EPROMER II

A proven Eprom programmer for BBC Model B and B+ with thousands in use in industry, educational and R&D establishments. It offers many of the powerful features of the EpromRyter and can program all single rail eproms upto 27256. Full details on request.

META Version III

"All the good features you would expect to find in a good source code editor are present . . . Meta assembler lives in a different world. It is structured to work with any new processor . . . as new instruction sets can be added . . . as needed . . . has a well featured editor with colour highlighting, a sound modular approach." **Acorn User October 1986**

- Assembles for over 30 popular processors, including Z80, 6800/01/02/04/05/09/11 etc — and 68000 — using native mnemonics for each processor, eg. LD A, (HL) for Z80 and MOV AO, $1000 for 68000 etc.
- Fully integrated Editor: four field, all search, search/replace, block copy, delete, move, marked save, load etc.
- Compatible with Portal Eprom Emulators and Team Disassemblers.
- Send object code in Intel Hex, S-Record, straight binary etc. down to discs, RS232, parallel port, Eprom Emulators etc — all **during Assembly.**
- Over 50 directives included as standard: handling nestable macros, conditional assembly and twenty types of table definition directives.
- 32 bit labels; 31 character names. Arithmetic and Boolean arithmetic to 32 bits.
- Modular source code with numeric and string parameter passing.
- Serial communicator area with eight options lines: echo, control code trap, LF supression/addition etc.
- Over 500 in use throughout the world in universities and many different industries.
- Two 16K Roms, two 80 track discs, A4 ring-band manual, function-key strip.

PORTAL EPROM EMULATORS

- Emulates 2716, 2732, 2764, 27128, 27256, 27512 eproms at 150ns Access time.
- Load at 4Kbytes/second — No "erase" time.
- 28 pin header plugs into Eprom socket on target system — status monitored on 13 Leds.
- Fully software controlled from Meta Assembler.
- 100 times faster than standard EPROM program/erase cycle.
- Fully CMOS compatible; draws no power from target system.
- Four portals may be independently programmed off same user-post cable.
- Complete with all cables, manual and disc.

PORTAL 512 (2716, 2732, 2764, 27128, 27256, 27512).

TEAM DISSASSEMBLER

The third part of the Universal Development System: a Meta labelling dissassembler.

Supports 1802, 8080, 8085, HD64180, Z80, 65XX (includes 65 col, 6511 etc), 68XX (includes 00, 01, 02, 03, 08 etc):

- Up to 64K of object code translated back into META compatible source code modules: labels automatically inserted on all jump targets, memory references etc.
- Pre-editing stage allows marking of object code areas as byte, string, word, long word etc, tables. These areas dis-assembled into appropriate directives instead of garbage mnemonics.
- Reconstituted source code ready for immediate re-assembly by META.
- Omniversal search/replace for re-naming arbitary label names with meaningful ones.

TECHNOMATIC DISC DRIVES

TS 400

PD 800P

A range of high quality high performance drives to meet the needs of all BBC Micro Users.
All drives fitted with high quality, slim line Japanese drive mechanism and necessary cables.
*All drives are fitted with high quality slim line ultra low power mechanisms capable of single and double density operation and offering fast track access and head setting times. Our confidence in their quality enables us to offer a two year warranty on these mechanisms without any extra charge.
*5.25" floppy drives are fitted with 40/80 track switches as standard at no extra cost. The switches are located in the front and clearly marked to indicate the status at a glance.
*The mechanisms are set inside attractively styled, sturdy metal casings painted in BBC beige colour.
*All drives fitted with all necessary leads and are ready for operation on unpacking. The drives with the mains power supply are supplied with a mains lead fitted with suitably fused 13A moulded plug.

5.25" Single Drives 40/80 switchable:

TS400 400K/640K — **£99 (b)**

PS400 400K/640K with integral mains power supply — **£109 (b)**

5.25" Dual Drives 40/80 switchable:

TD800 800K/128OK — **£179 (a)**

PD800 800K/1280K with integral mains power supply — **£199 (a)**

PD800P 800K/1280K with integral mainspower supply and monitor stand — **£209 (a)**

STARWORD – THE ELECTRON WORD PROCESSOR – NOW ONLY £19.95

WHAT PRICE QUALITY? WHAT PRICE COMPATIBILITY?
130.00 + VAT inc. Carriage

To quote a well known phrase, "You only get what you pay for"

This we feel sums up SLOGGERS pricing policy. Our goods may not always be the cheapest, but the products are most certainly the best.

THE PEGASUS 400 DISK DRIVE SYSTEM

Unlike our competitors, only top of the range products are used resulting with a specification bettered by none. The system consists of **THE SLOGGER 40/80 Track double sided 5.25" Disk Drives which maintains**

★ 400k storage per disk
★ Manufacturers (NEC/TEAC) 1 year guarantee
★ Internal Power Supply unit (built to BS 415)
★ Compatibility with the inexpensive (yet most reliable) 5.25" disks
★ Reliability at 3 m/s step rate (four times faster than some drives)

The SLOGGER PEGASUS Disk Interface which boasts

★ Excellent Computer Aided Design (CAD) production
★ Acorn approved design and standard WD1770 floppy disk controller
★ NEW Type-Ahead facility when used with Master RAM Board
★ 90 page documentation usually provided as a separate purchase
★ Compatibility with the ACP ADFS Version 1.1, which offers a total 640k when used with SLOGGERS 5.25" Disk drive.

The SLOGGER SEDFS ROM, about which the Electron User magazine enthused

"I can recommend SEDFS unreservedly" "Anyone considering upgrading to disk, SEDFS is the logical choice"

The quality of SEDFS speaks for itself, unlike other filing systems it offers

★ No loss of Electron memory, PAGE=&EOO (not &1DOO)
★ Full Acorn DFS (BBC Model B and MASTER SERIES) compatibility
★ All utilities built in, requires no additional menacing utility disk

PEGASUS 400.....£149.50 (inc. VAT)
PEGASUS INTERFACE.....£74.95 (inc. VAT)

ACORN ELECTRON COMPUTERS

These computers are fully tested and guaranteed and can be purchased direct from SLOGGER or through certain dealers. The demand for this computer has prompted SLOGGER to offer both the TURBO ELECTRON and the 64k ELECTRON as well as the standard 32k ELECTRON.

	ONLY
32k Electron	64.00
TURBO Electron (switchable)	85.00
64k Electron (switchable)	99.00

GREEN SCREEN MONITORS

SLOGGER has an offer a limited quantity of Green Screen monitors. These monitors are ideal for Word Processing in 80 column mode giving good clear consistant text.

A MUST for VIEW or STARWORD users.

Complete with all cables suitable for the Acorn Electron computer (or BBC)

Fully tested £79.00 inc carriage.

MASTER RAM BOARD
Upgrade your Electron to a 64k Machine using 32k of STATIC RAM

Installation service (see details below) for those not confident of desoldering the 6502 Microprocessor.

★ Fits inside the Acorn Electron, uses no cartridge ports
★ Compatible with ALL reliable Electron hardware (except TURBO DRIVER)
★ Compatible with ALL Electron software, switching between 64k mode, TURBO mode (yes . . . the TURBO DRIVER IS BUILT IN), and normal mode.
★ For correctly written software, HIMEM is ALWAYS AT 8000 in 64k mode so leaving 28000 bytes for BASIC or WORD PROCESSING in ALL screen modes
★ Doubles the speed of Word Processing
★ Up to 300% speed increase for games
★ Additional 12k for use as Printer Buffer with Expansion ROM 2.0

SEDS
THE COMPLETE DISK SYSTEM UPGRADE

Imagine. . .400k of memory instantly available. . .
Games loaded in seconds. . .
Word Processing files loaded or saved in seconds. . .
BASIC programs loaded or saved in seconds!!!
This is the powr of the disk system.
Requiring either the ROMBOX PLUS or the ACORN PLUS 1, SEDS is comprised of the following:
– High quality 40/80 switchable double sided 5¼ inch, BBC compatible drive with built in power supply unit.
– The Slogger Electron Disk Interface (SEDI)
– The Slogger Electron Disk Filing System (SEDFS)

SEDS ONLY £199.95

SEDI
SLOGGER ELECTRON DISK INTERFACE

The unit fits into the ROMBOX PLUS or ACORN PLUS 1 and provides the signals to control any standard 5¼ or 3½ inch drive. Supplied complete with SEDFS installed with appropriate documentation.

SEDI ONLY £74.95

SEDFS
SLOGGER ELECTRON DISK FILING SYSTEM

★ FULLY ACORN DFS compatible
★ OSWORD 7D, 7E and 7F implementation
★ FORMAT and VERIFY and other utilities built in
★ Page EOO. . .NO LOSS OF ELECTRON MEMORY
★ OPT commands for faster drives
★ FULLY compatible with BASIC Filing system commands
★ FULLY compatible with machine code programs
★ TAPE to DISK available (T2SEDFS)
★ Excellent comprehensive 90 page documentation.

"SEDFS is so good that I can't easily find fault with it, the manual is quite simply the best of the type I have seen, to suit everyone from the beginner to the professional."

"The SEDFS performed admirably throughout. . ."

"Anyone considering upgrading disks, SEDFS is the logical choice."

"I can recommend SEDFS unreservedly". . .Electron User, June 1987.

Installation Service

★ *Guaranteed to upgrade your Electron with either the Master RAM Board or Elk Turbo Driver AND RETURN IT WITHIN 7 DAYS OF RECEIPT.*
★ *Includes Postage paid BOTH WAYS (using FREEPOST) and 1 YEAR'S GUARANTEE.*
PLEASE NOTE. . .If you own a PLUS 1, please send it with your Electron to be tested to ensure reliability at high speed.

ROMBOX PLUS

SLOGGER's answer to PLUS 1

Q. Why not buy the ACORN PLUS?
A. Because, *"excellent though the PLUS 1 is, I think there is still room for improvement"* said the Electron User magazine.
The ROMBOX PLUS has this improved specicification:

1. Four ROM/RAM sockets to free the cartridge slots for more important add-ons. Each socket can take the usual 8K/16K ROMs but can also take 16K RAMs offering a staggering 64K SIDEWAYS RAM.
2. The PLUS 1 cartridge slots.
3. The PLUS 1 centronics printer port.
4. The Expansion ROM 2.0
5. Switched Joystick interface available.
6. Analogue Joystick interface still under development.

Still only **£54.95**

32K SIDEWAYS RAM CARTRIDGE

for ROMBOX PLUS or PLUS 1

★ Ever popular on the BBC.
★ Best used with EXP ROM 2.0
(1) Save ROM backups for loading into Sideways RAM
(2) Set up a 16K Print Buffer
★ Splits as 2 × 16K pages.
VIEW and VIEWSHEET in one slot!!!
★ Write protect option . . . prevents corruption of software.

"A very powerful piece of hardware"
. . .Electron User July 87

ONLY £34.50
(£39.50 with EXP ROM 2.0)

SLOGGER EPROM CARTRIDGE

★ Carrys TWO 8k/16k ROM/EPROM software
★ Compatible with PLUS 1, ROMBOX PLUS and BBC Master.
★ Simply plugs into cartidge slot.

£10.00 FOR LIMITED PERIOD

JOYSTICK INTERFACE

FOR ROMBOX PLUS or ACORN PLUS 1

★ Uses inexpensive ATARI-type joysticks.
★ Compatible with ALL Tape and Disk systems
★ Emulation of keys by Expansion ROM 2.0
★ Can be used with well written games either WITH OR WITHOUT A JOYSTICK OPTION.

"The ultimate Joystick Interface" . . .A&B July 87
"Well worth saving up for, I can recommend it to all Arcade addicts". . .Electron User May 87

ONLY **£14.95**

★ Requires Electron Expansion 2.0
. . . only £5 with this unit

JOYSTICKS

Switched Joysticks for the Slogger Joystick Interface.

Quickshot I £4.00
Quickshot II £6.00

EXPANSION ROM 2.0

for the ROMBOX PLUS and PLUS 1

★ Support Printer Buffer with 8K/16K sideways RAM or 12K with MASTER RAM BOARD.
★ RSAVE command to save ROM images to Tape or Disk.
★ RLOAD command to load Sideways RAM with a ROM image.
★ ROMS command to displays ROM/RAM in system.
★ JOYSTICK command for the SLOGGER Joystick Interface.
★ Allows cassette loading in high resolution.
★ Supports all standard functions (Printer, ADC, RS423).
★ Simply fits into internal ROM socket.

"There is room for improvement in the operating system. No doubt this was the idea behind Expansion 2." Electron User, July 87.

ONLY £11.95

(Securicor carriage £7)

65C102 2nd PROCESSOR

This amazing package consists of the Acorn 65C102 'Turbo' Board, the Watford Co-Pro Adaptor and Acorn 1.2 DNFS ROM. The 'Turbo' board, running at 4MHz with 64k of additional RAM will increase the speed by between 50 and 200% depending on the application running, and allow a BASIC program of upto 44k in any screen mode. Simply by plugging in the Co-Pro and the DNFS ROM with its special Tube host code and you massively increase the power of any Model B.

£135

The 80186 Co-Processor

This package consists of the Master 512 board, Watford Co-Pro Adaptor, 1770 Disc Upgrade and Acorn ADFS. The Master 512 board using the 80186 16 bit Processor at 10MHz and running Digital Research DOS Plus, gives a high degree of IBM compatibility at an extremely reasonable price. Included in the 512k package is a mouse and the amazing Digital Research GEM suite of software; GEM Paint, GEM draw and GEM desktop giving a complete Mouse Icons environment (All other GEM packages will work on the 512k). Famous packages that will work with the 512k board include Wordstar, Dbase II, Lotus 123 and many others. The only requirement to upgrade any BBC Model B to this system is you must have twin 80 track disc drives.

Panasonic KX-P1081

(Now IBM/Epson Compatible)

Available NOW at a superbly realistic price, the KX-P1081 perfectly balances features, quality of construction and Value for Money to produce the printer of tomorrow, here today, ready to sweep the current generation of machines away.

Ingenious innovation in terms of software control codes permits great flexibility when it comes to defining the print style. A nippy **120 cps** of clear Draft text backs up the crisp 24 cps Near Letter Quality text mode, with upto 40 superbly useful downloadable characters. A delightful range of assorted character widths is efficiently supported, with sizes ranging from a broad 5 cpi to petite 17 cpi, EVEN in NLQ mode. Some of the extensive support for serious use includes specialised functions to perform justification, centering and even left and right ranging. Proportional spacing permit even greater freedom when it comes to advanced use. Not only is the full Epson RX compatible control code set implemented, but extra codes have also been added to cater for the NLQ options, etc.

A full 96 ASCII character set is supported, with an extended set of 32 international characters and IBM special characters as well as IBM block graphics characters. A 1K Print Buffer alleviates much of the wait time normally associated with printing, whilst the bi-directional logic seeking print head takes the quickest route to print as required.

(Price inludes, FREE a 4ft Printer Lead, and a Dump Out 3, Screen Dump ROM worth £35 with every printer purchased from us).

Special Price: **£155** (carr. £6)

Optional RS232 Interface: **£39**

Panasonic KX-P3131 Daisy-Wheel Printer

This low-cost high-performance Daisy Wheel printer is ideal for anyone wishing to produce clear, immaculate letters or reports. It delivers, flawless text at 10, 12 & 15 CPS. Supports proportional spacing. Is Bi-directional. logic seeking. Printing speed: 17CPS. Has 6k printer Buffer. A printer of similar spec could cost a lot more than our ridiculously low price of:

Only **£245** (carr. £7)

Single Sheet Feeder	**£195**
Tractor Feed	**£90**
Spare Ribbon	**£3.00**

Acorn-Olivetti JP101 Ink Jet Printer

One of the main problems with most printers is that they are hopelessly noisy. How often have you wanted to print something late at night but not done so for fear of waking the children? Also ideal for those working in quiet environments such as libraries, etc. Silence the complaints with the serious solution from Watford at the amazing cost of only **£59**

(Offer valid while present stocks last)

JP101 accepts 9½" standard fan fold paper or single A4 sheets. Tractor & Friction feed supplied as standard – print speed 50 cps.

Pack of 4 refills **£10**

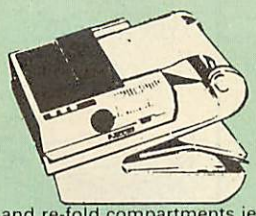

Screen Dump ROM for JP101 £10

Anti-Glare VDU Screen

This extremely effective, easy to install, 12" VDU screen eliminates harmful glare, improves contrast on colour monitors. Increases productivity in offices. A must for all wordprocessor users.

£12

Professional Printer Stand

This new professional printer stand takes hardly more space than your printer. Due to the positioning of the paper feed and re-fold compartments ie. one above the other, the desk space required for your printer functions is effectively halved. Additional facilities include: Easy access to paper from both sides, used with both top and bottom feed paper and with its dial controlled paper feed system with adjustable deflector plates it ensures smooth paper flow and automatic refolding.

£26

We stock a range of monitors to suit all needs. Choice of a monitor is a matter of personal taste so we recommend that whenever possible, you ask for a demonstration at our shop. All Monitors are supplied complete with connecting lead.

MICROVITEC 14"

for 12" Monitors **£10** (carr. £2.50)
for 14" Monitors **£14** (carr. £2.50)

MEGABUFFER 256

This new Megabuffer 256 from Watford is a full featured 256K Printer Buffer. It allows the computer to print 256,000 character in a short time thus freeing the computer very quickly. In short it makes light work of printing large documents, screen dumps, etc. It is extremely simple to connect. The features are:

- Low Cost, High performance.
- Improves efficiency by making more efficient use of computer and printer.
- Compatible with any computer and printer that uses Centronics Parallel connections including all BBCs, IBM PCs, etc.
- Total compatibility with all software.
- Cheaper phone bills when using your Modems.
- Ideal for those doing large graphics screen dumps that are slow to print.
- Multi-Copy facility allows you to print several copies via Megabuffer without going through your computer.
- Data Dump facility is included.
- Built in test unit for both the buffer & your printer.

In conclusion it can safely be said that MEGABUFFER 256 is the ultimate printer Buffer for both the amateur and professional user.

Only £125 (carr. £3)

CO-PRO Adaptor

Now for the first time you can add the Master Co-processor boards, to your standard BBC model B, or B Plus. With this brand new launch from Watford Electronics you can attach any BBC Master co-processor to the original BBC Micro. Once again Watford strides ahead with a new concept in BBC B Micro add-ons. This unique external Co-Pro Adaptor, is protected by patent applications.

Use the super fast Turbo Board with your BBC B, it is much faster than the 6502 2nd processor superseding it.

With the 512K addon your standard BBC machine achieves IBM PC compatibility at a realistic price running GEM, Lotus 123 and many other programs. Included with the 512k package is a high precision mouse and the Digital Research GEM suite of software; GEM Desktop, GEM Write GEM Paint. This requires both the 1770 DFS and the ADFS to be fitted to your computer.

To use other co-processors you require a BBC B with DNFS 1.20 or higher, or BBC B+ fitted with 1770 DFS 2.20 or greater. Co-processors work exactly like a second processor.

Master owners may use Co-Pro to add a second Co-processor externally.

Watford, brings power to your BBC at only:

£35.00 (carr £5)

Continued

THE EPSON RX-FX-KAGA PRINTER COMMANDS REVEALED (BOOK)

So you bought yourself a new printer, because the salesman in the shop showed you how clever it is and impressed you with all sorts of printouts to show its capabilities – he may even have offered you a special price.

However, now that you have got it home and connected it to your BBC microcomputer, you are wondering how to make it perform these magical tasks. The manual seems to give no clues, and when you type in the example programs, the computer throws the LPRINT statements back in your face.

Now what do you do, when this £400 piece of high technology refuses even to move its head, and you have stayed up until 2 in the morning with copious supplies of coffee, desperately trying to print something out. Once again, Watford Electronics comes to your help with our new book entitled 'THE EPSON FX-KAGA PRINTER COMMANDS REVEALED'.

This book describes in plain, easy to understand English, how to use and make the most of your KP810, PW1080A or any other Epson FX80 compatible Printers like Panasonic KX-P1080/1, etc., with the BBC Micro, both from BASIC and Wordwise.

It describes in detail how to obtain the maximum in graphics capability from your printer and includes full indexes allowing you to cross index the numerous commands. Every command is explained in detail, with an accompanying BBC Basic program and an example of its use from Wordwise.

£5.95 (No VAT)

NOW WITH EXTRA FEATURES AT NO EXTRA COST – Watford's latest DFS 1.44

- Incorporates Acorn's Official Tube Host Code so that those with 2nd processors no longer need to waste a ROM socket on the DNFS.
- Option to DOUBLE the speed of BPUT and BGET.

If you already have the Watford Electronics DFS and wish to incorporate these new facilities then simply return your existing DFS ROM to us together with £5 remittance for an upgrade. Please pack the ROM securely and address the package to our Upgrades Dept.

WATFORD's & ACORN's SINGLE DENSITY DFS

Watford's popular and widely acclaimed DFS has now been available for five years and has gained a large following amongst serious and educational users of the BBC Micro. Owners of Acorn or any other standard DFS can upgrade to our "Ultimate" DFS merely by replacing their DFS ROM. See below for this upgrade. ***(P.S. Watford's highly sophisticated DFS is fully compatible with Acorn DFS). (not Acorn's 1770 DFS)***

- *Complete Disc Interface Kit including DFS ROM and fitting instructions* **£46**
- *Acorn's 0.90 DFS Kit complete* **£45**
- *DFS Manual (Comprehensive)* (no VAT) **£6.95**
  (P.S. Our comprehensive DFS Manual covers both Acorn & Watford DFSs).
- *Watford's sophisticated DFS ROM only* **£16**
- *We will exchange your existing DFS ROM for Watford's Ultimate DFS ROM for only* **£12**
- *DNFS ROM only* **£17** ● *ADFS ROM only* **£25**
- *Watford's DFS is exclusively available from Watford Electronics and their appointed dealers only. Every ROM carries a special label with LOGO and serial number.*

NEW WATFORD's Mk II Double Density DFS INTERFACE

Many of our customers have wanted to use our superior DDFS and Acorn ADFS together. Now our MkII DDFS board has been adapted to allow the use of Acorn ADFS.

Added features include:

- Acorn ADFS compatible – Use ADFS on our DDFS board.
- Tube host Code – No longer any need to have the DNFS in your machine to use Co-Processors, even the CoPro and Master 512.
- Auto 40-80 Track sensing – no need to fuss with 40/80 track switches (even works with protected disks).
- An extremely powerful 8271 emulation – ensuring compatibility with almost all software.
- New low profile – small footprint board.
- Fits with all third party ROM boards.
- Option to double the speed of file handling operations – BPUT and BGET
- Operates in both single and double density modes.
- OSGBPB has been recoded, increasing still further the speed of file handling.

Please note that not all DDFS's are capable of providing either the full 80% storage increase or of allowing a file the full size of the disk – Ours allows both of these!

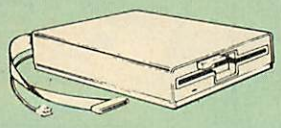

If you already have a DDFS (any manufacturer), and wish to upgrade to our MkII version, then simply return your existing ROM and DDFS board and we will supply the new DDFS for only **£25.00.**

- Special introductory offer **£39.00**
- DDFS Manual (No VAT) **£6.95**
- We will exchange your existing DFS Kit for our sophisticated DDFS for only **£25.00**

Please note, as the MkII DDFS is a hardware and software upgrade, it is not possible for existing Watford DDFS users to simply exchange their ROM for the new version.

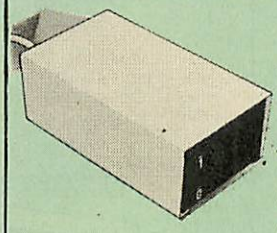

SPECIAL DISC DRIVE/DDFS OFFER

Type CLS400

- The popular Mitsubishi 400k Single Disc Drive, Double Sided, cased with Cables. Plugs directly to your Micro.
- Watford's popular DDFS Disc Interface (allows 720k storage). Will run in both Single and Double Density modes 40/80 track Software switchable.
- A comprehensive User Friendly Manual.

A Bargain at Only **£125** (£6 carr)
(Offer valid while stocks last)

3½" DISC DRIVE OFFER

These top quality 3½" Double sided, 80 track, 1 Megabyte (unformatted each Disc Drives), are attractively finished in BBC beige. They are supplied complete with all cables and a Utilities Disc. They run directly from the BBC B/Master's own PSU.

- Single 400K Drive **£69**
- Twin 800K Drives **£126**

MYSTERIES OF DISC DRIVES & DFS REVEALED (BOOK)

Are you tired of faulty cassettes, and lengthy loading times? Do you want to upgrade your BBC micro to take discs but you get tied up in the plethora of jargon surrounding the choice and use of these systems.

Then The Mysteries of Disc Drives and DFS Revealed is the book for you. It explains in detail the different types of systems available, how they are installed and how to use them. Many examples are given including pre-written programs to call various functions of the DFS available only through Operating System calls. Different types of disc, 40/80 tracks etc. are all explained. This book is ideal for the beginner confused by the plethora of choice available in the marketplace.

£5.95 (Book No VAT)

DISC ALBUMS

Attractively finished in antique brown leather look vinyl. Stores upto 20 Discs. Each disc can be seen through the clear view pocket.

£4

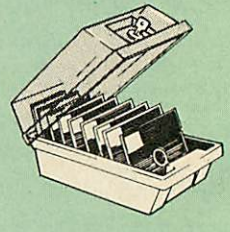

FLOPPY HEAD CLEANER KIT

The heads in floppy drives are precision made and very sensitive to dirt. The use of a cleaner Kit is a sensible precaution against losing valuable data. It is recommended to clean the drive head once a week. It is very simple to use. Available in 3½" & 5¼", please specify.

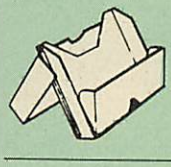

£7

ANTISTATIC LOCKABLE DISC STORAGE UNITS

Gives double protection – Strong plastic case that affords real protection to your discs. Antistatic helps avoid data corruption whilst in storage. The smoked top locks down. Dividers and adhesive title strips are supplied for efficient filing of discs.

- **M35** - holds upto 50 5¼" discs **£6.50**
- **M85** – holds upto 95 5¼" discs **£8.00**
- **M25** – holds upto 25 3 ½" Discs **£5.50**
- **M50** – holds 50 3½" Discs **£7.50**

PLASTIC LIBRARY CASES

Holds up to 10 5¼" Discs. **Only £2.00**

PLONKER BOX

When using ones micro, there is a tendancy to have more than one Disc on the desk. This exposes them to the hazards of fingerprints, scratches, dust, coffee and an untidy desk.
Why not protect your valuable data from all these hazards with the help of our extremely handy and low cost PLONKER BOX. It holds up to eight 5¼" Discs.

Protection at Only: **£2**

DUST COVERS (For our Disc Drives)

Single CLS (without PSU) **£3.20** Twin CLD (without PSU) **£3.85**
Single CS (with PSU) **£3.95** Twin CD (with PSU) **£3.90**

Quality Disc Drives from Watford

To help you decide which drive is the most suitable for your needs (and your pocket!), we have produced the table below.

The first capacity given in the first column indicates capacity in single density mode. That within the brackets is the capacity in double density mode. All disc drive type numbers start with the prefix "C".

The tinting on some of the boxes is used to indicate which Drives are 40 track (non-tinted) and which are 80 track (tinted). All our 80 track drives are already fitted with a 40-80 select switch.

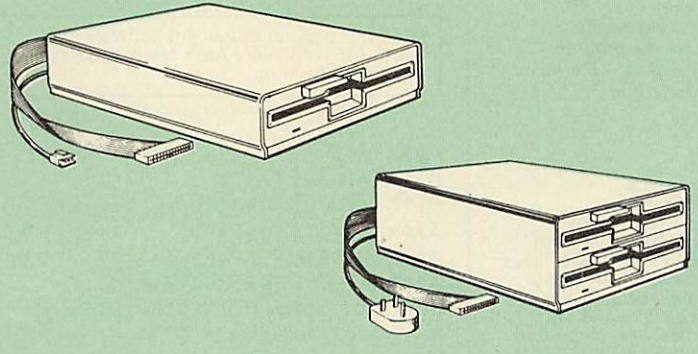

***All our Disc Drives are Double Sided and will operate in both Single and Double Density modes.** Extensive experience of the usage of disc drives suggests that the JAPANESE drives currently represent about the best in terms of speed, reliability and overall "elegance" available for the BBC Micro.*

Various other "manufacturers" of disc drives for the BBC micro (more accurately, "packages" label other manufacturers drives with their own name). We buy the high quality JVC and Mitsubishi drives in large quantities directly from the manufacturers, package them and sell them at "dealer" prices direct to the public.

If you look around the popular BBC micro press, you will find that the prices we quote for the top quality, new slimline disc drives are, virtually without exception, some of the best around. These prices, coupled with the backup of one of the country's largest distributors of BBC peripherals provides a superb deal.

Unless you anticipate using dual drives in a fully expanded BBC system for long periods of time with little ventilation, then we suggest that our range of "CL" disc drives without the PSU (Power Supply Unit) would be quite adequate (extensive tests within our workshops have confirmed this). All drives are supplied complete with a SPECIAL UTILITIES Disc, Cables and Plugs. The Drives with power supply have a mains moulded plug for safety purposes. Ideal for Schools & Colleges. We are now able to supply all single disc drives with Power Supply, in either single or dual case. (Dual case has a twin data cable and a power supply capable of driving two disc drives) allows easy expansion to a dual drive unit, at a later date. Prices stated in the pricing boxes below are for single drives in standard single cases. Single drives in a dual case cost an extra £5. (At Watford we anticipate your needs of tomorrow, not just today)!

When using a BBC Micro, most people find themselves short of desk space. The Watford's BBC Micro plinths form an ideal way of recovering some of this precious space) your BBC, Disc Drive and Monitor can all occupy the same vertical footprint and still be comfortably situated. With the Watford Double plinth, your Disc Drive is mounted vertically at one side, leaving a very valuable area directly in front of you for such useful items as spare discs, pen, paper, reference manuals, etc. Follow the trend with Watford plinth. (Turn to the 6th page of our advert for the Plinths).
P.S. All our 5¼" Disc Drives with PSU are compatible with the Compact Micro. All you require is the special Compact Disc Drive Cables designed by us.

Capacity	Drives without P.S.U.		Drives with P.S.U.	
	Single	Twin	Single	Twin
200K (360K)	CLS 200 £89		CS 200 £98	
400K (720K)	CLS400S £89	CLD 400 £174	CS 400S £99	CD400 £188
800K (1.44M)		CLD 800S £175		CD 800S £189

● TWIN Disc Drive Case, complete with Power Supply & Cables **£43**
Securicor carriage on Disc Drives £5 to £6

Prefix ***C*** *= Cased Drive*
L *= Less PSU*
S *= Single*
D *= Double*

Suffix ***S*** *= 40-80 Switchable*

e.g. CLS400S = Cased Disc Drive, Less power supply unit, single 5¼" 400K, (720K in double density); Double sided; 40/80 track switchable.

Cable to connect 5¼" Disc Drives to BBC Compact
Single £9 Twin £12
Special Cable to connect both 3½" and 5¼" Disc Drives simultaneously to the BBC Compact £13

NOMINATED FOR

MICRO BRITISH COMPUTING AWARDS 1987

QUEST MOUSE

QUEST MOUSE

The ultimate in Mouse technology, the Watford Electronics Quest Mouse must be the most powerful Mouse package yet produced for the BBC Micro. Featuring state of the art 32K ROM software the Quest Mouse package is filled with features essential to the budding artist. The Quest Mouse is a high precision, low profile and large footprint mouse. It has three large comfortable buttons and is smooth and easy to use on most work surfaces. The Quest Mouse is FULLY HARDWARE COMPATIBLE with the AMX MOUSE so that it will work with any of the AMX range of software.

The two parts of the Quest package are available separately so that existing Mouse owners can upgrade to the Watford's sophisticated Quest Paint software or replace their existing worn out mice for a minimum cost.

QUEST PAINT

The Quest Mouse software is supplied on a PALPROM unit to allow the sophisticated 32K program to be used from a single ROM socket. It is compatible with the BBC B, BBC B Plus and BBC Master Series machines.

The software is used to draw high resolution Mode 1 pictures in full colour. All menu selection and control of the drawing process is performed with the mouse so that you will hardly ever touch the keyboard.

SOFTWARE FEATURES

The software is far too powerful for us to describe it fully in such a small space. Below is a list of the various features. Please write to us for a fully descriptive leaflet.

Disk interface not required. Utilities disk has facility to create and print big screens. Colours applied can be solid, either pattern of user defined pattern. Drawing can use brush or airbrush. Brush shapes can be defined and stored. Airbrush sprays colour/pattern randomly with four jet sizes and even or center spread. Colour cycles. Colour protection to stop particular colours from being overwritten by selected drawing actions. All standard drawing facilities like: rubber, straight pencil lines, triangles, circles, ellipses, rectangles, parallelograms, polygons, etc are provided. All shapes can be solid or just a boundary line. Once a shape has been set up it can be repeated anywhere on the screen. Global colour replace in a rectangle. Powerful fill facility for areas and vertical/horizontal lines. Full cut and paste of rectangular areas with rotation and size with screens from Watford Beeb Video digitiser. Load and Save screens with colour pallet information, save brush and pattern definitions etc.

Take The Guesswork Out of Selecting a Mouse Package

With reviews like this how can you go wrong.

Popular Computing Weekly, 9-11 June '87

"What you actually get for your money is a well built, three button mouse (far superior to the AMX mouse)."

"Overall the combination of a quality mouse and decent art package gives Watford Electronics a real chance of supplanting AMX as mouse supremos."

Micro User June '87

"Quest Mouse and Quest Paint can hold their heads high in the market. . ."

A&B Computing June '87

". . . Watford Electronics, a company famed for excellent hardware add ons and versatile software packages. Called Quest mouse, "this is a very special mouse driven drawing package. . ."

". . . you will have one of the most comfortable and professionally built mice I have used in a long time. The buttons are responsive, the mouse movement is smooth and without directional bias – a pleasure to use."

"What we have here is probably the best art package there is for the BBC Micro . . ."

"Quest Paint is a major leap forward in BBC programming. . ."

"Quest Paint is an original piece of programming, it is friendly and well endowed with many useful facilities. I would comfortably say it is easier to draw good pictures with Quest Paint than it is with more expensive 'Professional' art packages for the Atari ST and the Commodore Amiga. A recommended buy if you are looking for the best in BBC micro based art packages".

Acorn User, September '87

"The mouse (Quest) performs well in the face of competition from AMX, Wigmore and the rest . . ."

". . . this package represents excellent value for money. If you are interested in art then this program is for you to buy".

"Given time, I can see no reason why Quest Paint shouldn't take on the title of the definitive art package available for the BBC Micro to date".

"All in all, Quest Paint is a very professional package. It contains virtually every feature the budding artist could require".

"What makes Quest Paint so versatile is the addition of a sub-menu which allows you extensive control over each function".

"Until recently, Superart from AMS had been judged as the definitive mode 1 graphics package for the BBC micro. But now it has a serious rival in the form of Quest Paint, from Watford".

"As a measure of what is contained within Quest Paint, I would say it had all the features of Superart plus . . ."

"In most art packages, provision is given for drawing triangles and rectangles. Quest Mouse goes 14 better, allowing any regular polygon of upto 16 sides".

"One facility, not found on any other Art package to my knowledge, is the ability to access a digitiser from within the program".

The reviewer concludes by saying, "The result is an extremely comprehensive and professional art package".

ConQuest

Watford's Quest package is an extremely powerful and flexible drawing package, with very wide and unusual features. However, since its launch various suggestions for even more advanced & powerful facilities were received from the Quest users. ConQuest allows you these more advanced facilities, like, distortion of a cutout to any shape and a full font designer. If you also have a GXR ROM in your machine or you are using a BBC Master then ConQuest will take advantage of this to give ellipses at any angle, sectors and arcs, etc. Quest combined with ConQuest and Acornsoft GXR ROM make up THE MOST POWERFUL drawing packages available for the BBC range. Quest Paint is able to take advantage of almost any additions to your machine, such as Shadow or Sideways RAM. ConQuest takes this principal even further, by utilising the otherwise normally incompatible Sideways RAM facility by holding pictures in them.

Some of the features are:

- *Pick filenames off the screen for loading and saving.*
- *Rotate a cutout to any angle and Distort it to any four sided shape.*
- *Has Built in Font editor.*
- *Default brushes and patterns on startup.*
- *16 x 16 font available on start up.*
- *Ability to reset patterns, fonts and brushes to default at any time.*
- *ROM based enhanced Epson and compatible printer dump.*
- *ROM based enhanced extended picture routine.*
- *Ability to create and abort extended pictures.*
- *Improved disk access speed for extended pictures.*
- *User definable sideways RAM driver for incompatible sideways RAM systems.*
- *Ellipses at any angle on Master 128 (or B with GXR ROM).*

DIAGNOSTICS DISC

The BBC Micro is a very complex machine and thus diagnosing a fault can be very difficult. At Watford Electronics, we realise how difficult it can be when faced with a problem, finding yourself a long way from your nearest dealer, or even just uncertain about your Beeb's health, but not wanting to waste time and money taking it to be looked at.
The solution to these problems is here now, in the form of the Watford's Diagnostics Disc. This excellent utility is specially designed to test out the following areas of your Beeb:
RAMs, ROMs, ULAs, Sound, Keyboard, Disc, RS423, ADC, User Port, Printer Port, Cassette, Joysticks, Speech, Disc Drives, 6502 and Z80 2nd Processors.
This utility is an invaluable aid for all those who take the reliability of their system seriously. A comprehensive manual provides full operating details and a list of possible causes and remedies for any faults that you may find along the way. The package also enables a permanent equipment and service record to be maintained.

Only £20.00

OFFICE MASTER

CASHBOOK – A complete "Stand Alone" accounting software package for the cash based sole trader/partnership business. It is designed to replace your existing cashbook system and will provide you with a computerised system complete to trail balance.

FINAL ACCOUNTS – Will take data prepared by the Cashbook module and produce a complete set of accounts as following: Trial Balance with inbuilt rounding routine; Notes to the accounts; VAT Summary; Profit & Loss A/C; Balance Sheet.

MAILIST – A very versatile program. Enables you to keep records of names and addresses and then print, examine, sort and find them, all with special selection techniques.

EASILEDGER – A management aid software tool designed to run alongside an existing accounting system. Essentially a Debit/Credit ledger system which can handle sales, purchase and nominal ledger routines to provide instant management information.

INVOICES & STATEMENTS – Greatly reduces the time and cost of preparing Invoices and Statements by storing essential information like customer names, addresses and account numbers. Has VAT routines and footer messages facility.

STOCK CONTROL – Allows you to enter stock received, stock out, summary of stock items and current holdings together with details of total cost, total stock to minimum level, units in stock ordering, quantity and supplier detail.

All this for only **£21** (Disc)

OFFICE MATE

- DATABASE
- BEEBCALC SPREADSHEET
- BEEBPLOT GRAPHICS

DATABASE – Set up a computerised card index system with powerful search facilities.
SPREADSHEET – Offers many calculation and editing features.
BEEBPLOT – Provides visual representation from Spreadsheet data.

OFFICE MATE Only £10 (Disc)

TED

THE ULTIMATE TELETEXT SYSTEM

TED is one of a new generation of powerful 32K ROMs for the BBC B, B+ and Master computers and is compatible with disc, tape and network systems. It is in everyday use in schools, colleges and universities, Programmers, Prestel I.P.'s, Micronetters and exhibitors have also found it indispensable.

TED includes the most comprehensive teletext (Mode 7) screen editor ever written for the BBC micro, combining flexibility with ease of use. Its sophisticated facilities include line, column and block copying within AND between frames; text, in a variety of styles and sizes, entered directly from the keyboard; graphics and line drawing modes; search and replace; margins; printer dump routines and a library of in-built icons and typefaces. TED will edit ANY mode 7 screen and can even convert high-res graphics screens to mode 7! Included within the ROM is a fully Epson compatable mode 7 graphics dump routine giving a grey scale printout of exactly what appears on the screen.

Using '*SHOW' (a versatile carousel), collections of mode 7 screens may be 'routed' or displayed sequencially, making it ideal for creating and running 'Viewdata' information systems. Over 1200 frames may bestored on a twin 80 track drive. A unique feture of TED is '*SCROLL', which lets you create pages of up to 600 lines which may be viewed 'Wordwise style', automatically or manually. SHOWs and SCROLLs may be freely mixed and even used from within a BASIC program.

The package comprises a 32K ROM, a 117 page manual, a function-key strip and a demonstration disc containing examples of real-time animation and a sample 55-frame database. A stand-alone machine code routine is provided allowing SHOWs and SCROLLs to be displayed on machines not fitted with TED.

Price: £35

ROM-SPELL

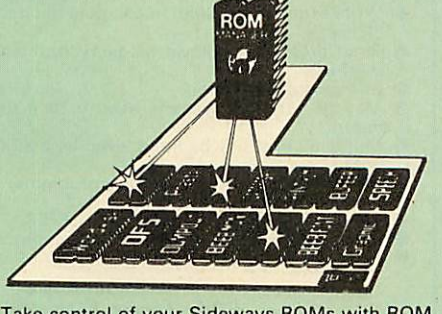

Probably the most advanced and fastest spelling checker available for the BBC Micro. Compatible with View, Wordwise and Wordwise Plus ROMSPELL is simple to use with easy editing of incorrect words. Full facilities for editing the user dictionary to allow customisation to your personal needs. Dictionary includes over 30,000 words and is supplied with a Comprehensive manual.

NOT compatible with 1770 DFS.
(Please state 40 or 80 track disc)

Price still only: £25

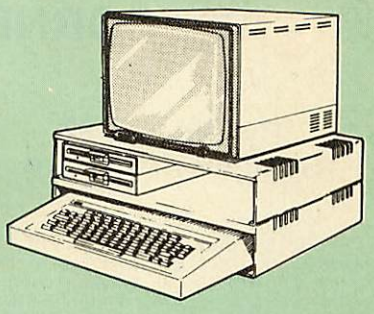

ROM MANAGER

Take control of your Sideways ROMs with ROM Manager. This powerful utility ROM gives you power over your sideways ROMs. Disable whole ROMs, send commands directly to named ROMs and many other powerful facilities.
"Provides comprehensive management of all your installed ROMs". (BEEBUG November '84.)

ONLY £20

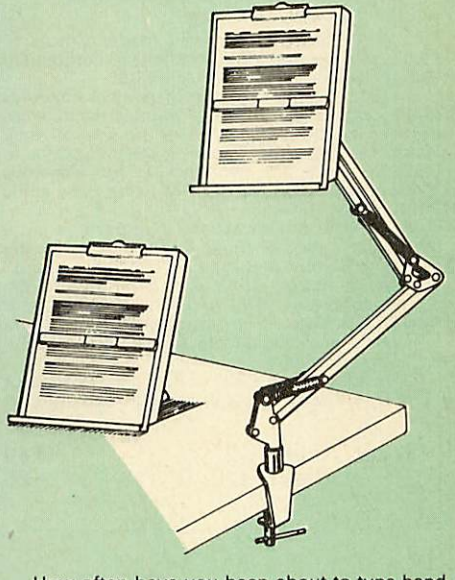

PLINTHS FOR BBC MICRO, MASTER & PRINTERS

Protect your computer from the weight and heat of your monitor. The BBC micro plinths have slots for maximum ventilation. The single plinth is suitable for a BBC and monitor, whilst the double height version provides enough room for our stacked or side-by-side dual disc drives or TORCH Disc pack, to be placed in the centre section. If you use our stacked drives, the remaining space can be used for further peripherals e.g. Speech Synthesizer, EPROM programmer or simply stationery. The computer slides neatly in to the lower section allowing easy access to remove the lid. The printer plinth is equally sturdy but without the cooling slots. It allows for access to the paper from the front as well as from the rear, (a facility not often thought of in similar products) if the paper is located beneath the plinth. This is a very convenient way to work especially if your work area is not deep enough to take the printer and paper separately.

SINGLE BBC PLINTH	**£11** (carr. £1.50)
DOUBLE BBC PLINTH	**£19** (carr. £3.00)
PRINTER PLINTH	**£10** (carr. £1.50)
SINGLE MASTER PLINTH	**£14** (carr £1.50)
DOUBLE MASTER PLINTH	**£24** (carr £3.00)

COPY HOLDERS

How often have you been about to type hand written notes into your computer when you find that there's nowhere to rest the paper or that your notes are resting at the wrong angle to read the type? Whether the notes be your latest program or the draft of a new trilogy, the new Manuscript Holders from Watford are superb for holding your paper at the ideal height and angle to allow you read and type in ease and comfort.

Available in 2 versions, desk resting and shelf clamping versions, these two units hold your paper firmly by means of a plastic retaining ruler and a clip grip. Both units are full A4 size.

Amazing value at only
Desk Top **£10** (carr. £2)

Angle poise **£14** (carr. £3)

Continued ——→

ARIES CORNER

The Aries B-32 Shadow RAM Card

Like the BBC B+, the B32 provides 20k of shadow screen RAM and 12k of sideways RAM. Unlike the B+, the B32 has simple software commands which allow the user to reconfigure the RAM as 16k of shadow RAM and 16k of sideways RAM, or all 32k as sideways RAM.

With the B32, the programmer gets up to 28k of RAM available for Basic, Logo, Comal, Forth, Lisp and BCPL programs in any screen mode. The business user gets extra memory for View, ViewSheet, Wordwise Plus, Interword and many other applications. For advanced applications, the scientific user gets access to a massive 47k of data storage using the Acorn approved *FX call.

Sideways RAM enables you to load sideways ROM images from disc, allowing you to have a large library of sideways ROMs (subject to the copyright holder's permission) stored on disc. The B32's sideways RAM can also be used to extend any operating system buffer (such as the printer buffer) or to load tape programs into a disc system.

The B32 simply plugs into the 6502 processor socket on your BBC micro – no flying leads to connect and no soldering. Provision of the on-board ROM socket means that the Aries-B32 control ROM does not use up one of your existing ROM sockets.

Price: **£80** (carr. £2(

Aries B-12 Sideways ROM Board

This board is extremely well made, simple to install, reliable when fully loaded and compatible with the Aries-B20 and the Aries-B32

The B12 provides a total of twelve sideways ROM sockets (the four in the original machine are replaced by the twelve on the board), all fully accessible by the MOS sideways ROM system. In addition, there are two sockets for sideways RAM, giving up to 16k of RAM using 6264 static RAM chips.

The B12 system consists of two parts: a large detachable "mother board" which carries the extension ROM sockets and a small "base board" on a short ribbon cable, which plugs into the existing sideways ROM sockets. This two-board design eliminates the reliability problems previously associated with some other ribbon-cable based systems.

If you do not have a B32 or B20, a small adaptor module (the Aries-B12C) is available at a nominal cost.

Price:	Aries B-12	**£40**
	Aries B-12C	**£5**

ARIES B-488 IEEE-488 INTERFACE UNIT

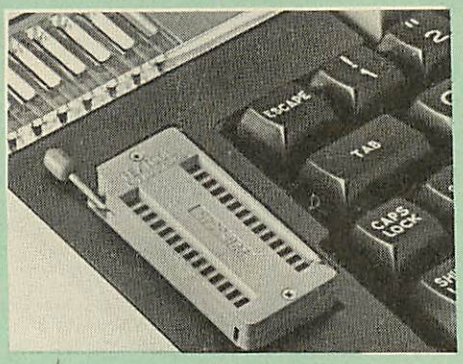

The Aries-B488 is an interface unit to enable the BBC micro to control and monitor IEEE-488 bus systems. The IEEE-488 bus (also known as the 'GPIB' or 'HP-IB') is the standard method of interconnecting programmable laboratory instruments and control equipment. Using the B488, up to 15 devices may be connected in a single high-speed data network.

£238 (Carr £3)

GRAPH PAD 2

Supplied complete with Software
£60 (Carr. £3)

SIDEWAYS ZIF SOCKET

Allows you to change your ROMs quickly and efficiently, without opening the lid. The ZERO INSERTION FORCE (ZIF) socket is located into the ROM Cartridge's position.

- Very simple to install. NO SOLDERING required. The ZIF (Zero Insertion Force) eliminates the possibility of damage to your ROM pins when inserting & extracting.
- The low profile of the socket allows unrestricted access to the Keyboard.
- All data and address lines are correctly terminated to ensure correct operation of suitable ROMs with the BBC micro. We also supply a purpose designed see-through storage container with anti-static lining, allowing you to store up to 12 ROMs, protecting them from mechanical and static damage.
- This versatile hardware solves the problem of running out of socket space. Simply lift the ROM from the ZIF & insert a different one (No pulling or pushing of Cartridges. It is a must for all professionals and Hobbyists alike.)
- BBC, B+ and Master compatible.

ONLY **£15** (carr £2)

Low Profile CARTRIDGE SYSTEM

Complete System consists of: Low profile ROM Cartridge, Socket housing, Cable assembly, 5 labels and a library storage rack.

● Complete System	**£11**
● Spare Cartridges	**£2.50**
● Spare Rack	**£1.50**

16K Sideways RAM Modules

Complete with such features as read and write protection, these new modules from Watford Electronics are ideal for the hobbyist, software developer and ROM collector.
Key points to note about this new addition to the Watford range of products are:

- Write protection (useful in a variety of circumstances).
- Read protection (allows recovery from ROM crashes).
- Compact construction.
- May be fitted in systems even with a ROM board.
- Multiple units may be fitted, even with a ROM board.
- No overheating or overloading problems.
- Free utilities disc supplied.
- Can be used as a 16K PRINTER BUFFER.
- Ideal for professional software development.
- Supplied with utilities software disc.

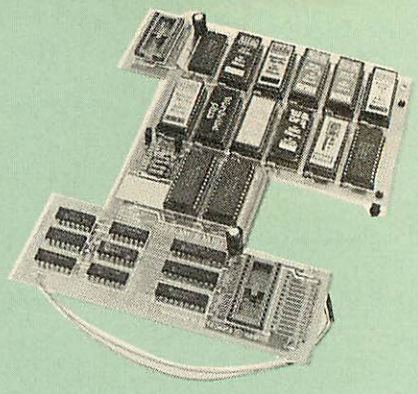

Only: **£24** (carr £2)

Optional extras

Battery for Battery Backup **£3**

All prices in this advert are exclusive of VAT.

SOLDERLESS SIDEWAYS ROM SOCKET BOARD

In the May 1986 Micro User's independent review, the writer concludes, "The board has been well laid out. Its position is much better than others – not over the HOT RAM chips and further away from the disc controller area". "I give the solderless ROM board the thumbs up and wish it success".

This brand new board from Watford Electronics is designed specifically for those wishing to add a ROM board to their own BBC without the need to perform any soldering.

This new board expands the total possible number of ROMs in a BBC from 4 to 16.

Unlike our competitors inferior boards, the ONLY upgrade required for fitting battery backup to the Watford Solderless ROM board (all Watford ROM boards, actually) is the fitting of the battery itself. (No other expensive components are required.)

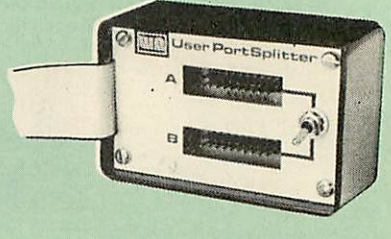

- The key features of this new, no fuss, easy to install quality product from BBC leaders Watford Electronics are as follows:
- Increase your BBCs capacity for ROMs from 4 to 16.
- **No soldering required.**
- Very low power consumption.
- Minimal space required.
- Compatible with Torch, DDFS, RAM Card, 2nd Processor, etc.
- Socket 14 takes two 6264 RAM chips.
- Read protect to make RAM "Vanish") allows recovery from ROM crashes.
- Battery backup option for RAM chips.
- Supplied ready to fit with comprehensive instructions.

Price: Only £32
Battery backup fitted **£36**
(carriage £2)

- Sideways RAM Utilities Disc for Solderless ROM Board. Includes the options to load and save ROM Images and the facility to use Sideways RAM as Printer Buffer.

Only: £8

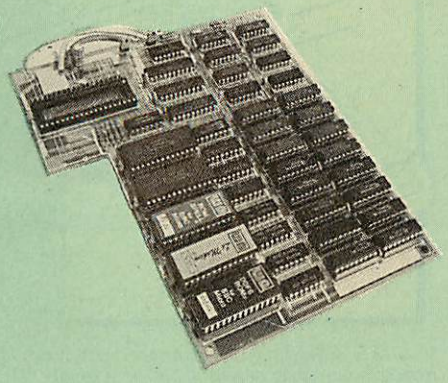

USER PORT SPLITTER UNIT

Gone are the days when you had to plug and unplug devices from the User Port. This extremely useful little device allows two units to be connected to the User Port simultaniously, and select between them simply by toggling a switch. This device is particularly useful for those people using Quest Mouse and the Watford Video Digitiser or any similar combination.

Excellent Value at **£19**

ROM/RAM CARD

Watford Electronics announced the first ever commercial ROM board for the BBC micro, the Watford Electronics 13 ROM Socket Board 3 years ago. Following the success of this board, we have designed what probably represents the ultimate in expansion boards, the new Watford Electronics ROM/RAM board. This highly versatile and sophisticated board represents the latest in "2nd generation" sideways ROM technology for the BBC micro, designed to satisfy the serious BBC user.

- NO SOLDERING required to fit the board.
- NO overheating problems.
- No User Port corruption (avoids problems with the mouse, modems, Eprom Programmers, etc.)
- Fully buffered for peace of mind.
- Firm mounting in BBC micro.
- Compatible with all BBC micros (not BBC+ or Master).
- Total number of ROMs increased from 4 to 8.
- Up to 8 banks of sideways RAM (dynamic).
- Option for 16k of Battery backed CMOS RAM (CMOS RAM needs one ROM socket).
- Software Write protect for ALL RAM.
- Read protect for CMOS RAM (ALLEVIATES crashes during ROM development).
- Separate RAM write register (&FF30 to &FF3F).
- Automatic write to currently selected RAM socket for convenience.
- Accepts any ROM.
- FREE utilities disc packed with software.
- Compatible with our DDFS board, 32k RAM Card, Delta Card, sideways ZIF, etc.
- Large printer buffer.
- UNIQUE Fully implemented RAM FILING SYSTEM (similar to the popular Watford DFS).
- ROM to RAM load and save facilities.

The SFS (Silicon Filing System) can utilise up to the full 128k of RAM (with the SFS in any paged RAM) as a SILICON DISC. This behaves as a disc drive, with all the normal Watford DFS features (including OSWORD &7F for ROM-SPELL, etc.) to provide an environment that looks like a disc but loads and saves MUCH faster.

The ROM-RAM Board plugs into the 6502 CPU socket. This leaves free all the existing ROM sockets, which can still be used normally.

Any ROM that can be plugged into the BBC micro's own ROM sockets may be used in the ROM-RAM Board.

The ROM-RAM Board is supplied with all ordered options fitted as standard. Upgrade kits (with full instructions) are available for all of the options, for later.

Please write in for further details.

INTRODUCTORY PRICES:

- *ROM/RAM card with 32k dynamic RAM £39*
- ROM/RAM card with 64k dynamic RAM **£52**
- ROM/RAM card with a massive 128k dynamic RAM **£80**

(carriage on ROM-RAM Card £3)

OPTIONAL EXTRAS:

- *16k plug-in Static RAM kit.....£6*
- *16k Dynamic RAM for Upgrade.....£7.50*
- *Battery backup.....£3*
- *Read and Write protect switches.....£2 each*

Complete ROM-RAM board
All options installed £89

P.S.
Is your existing ROM Board overflowing with ROMs? Do you need more Sideways RAM? Is your Board unreliable? Then upgrade to Watford ROM/RAM Board and pay £10 less

Le Modem

The MODEM from Watford

At last a professional MODEM for the BBC Micro. Unlike other 'Modem packages' this is a complete package there are no extra software costs to get 'up and running'. Of course Le MODEM is multi-standard, i.e. 300/300, 1200/75 & 75/1200 UK and BELL (USA) are all supported.

The features that make Le MODEM such good value are:

- *A complete communications terminal that transforms your BBC Micro into a very powerful World-wide data transfer system.*
- *Auto Dials, Auto answers, and is completely controlled by your micro. There are no external controls!*
- *Allows you to access PRESTEL, B.T. GOLD, THE SOURCE, MICROLINK, MICRONET, MICROWEB, THE TIMES NETWORK, MICRO LIVE (BBC TV database), CITY BB and more.*
- *Designed to be SIMPLE but SOPHISTICATED. To LOGON to a data base all you have to know is its TELEPHONE NUMBER, Le MODEM does the rest.*
- *Supplied with a comprehensive telecomms package in a 16K sideways ROM which includes a FULL PRESTEL terminal allowing TELE-SOFTWARE to be downloaded.*
- *A comprehensive 80 column terminal. This includes XMODEM error checked transfer protocol, to allow error free data transfer anywhere in the world!*
- *FULLY controlled by simple '*COMMANDS allowing you to control it from your own BASIC programs. To get you started we supply a FREE disc of bundled software!*
- *Connects to the 1MHz bus. A *AUDIO ON-OFF command allows you to actually hear the telephone line through your BBC micro loudspeaker.*
- *Completely self contained with internal mains power supply. (Even a free mains plug is fitted!) A *TEST facility gives ON SCREEN indication that Le MODEM is working correctly.*
- *Packaged in such as way that you need nothing else except a BBC Micro to communicate with computers all over the world.*
- ***FREE Registration to MicroLink.***

APOLLO

The NEW Modem from Watford

Following numerous requests from you, our discerning customers for an APPROVED, Low Cost & High Performance modem with Auto Dial & Auto Answer facilities as standard) we bring you the versatile APOLLO Modem. Just compare the features and look at the price (which incidentally includes the cost of the Software, manual and BBC connecting cable). We are sure you will agree that Watford Electronics in their traditional way are giving you a super 'value for money' deal.

Just look at these features:

- V21 for Bulletin boards, Microlink, Telecom Gold, etc.
- V23 for Prestel, Home Banking, and other Viewdata services.
- Reverse V23 allows User run Viewdata service.
- 1200-1200 half duplex for communications.
- XMODEM, HEX and ASCII file transmission.
- Auto Dial of given 'phone number.
- Auto Answer for User's Bulletin Board.
- 80 column terminal with split screen facility.
- Prestel text screen dump.
- Fully BABT approved.
- **FREE Registration to MicroLink.**
- **FREE £5 off Micronet Annual Subscription including Prestel and Telecom Gold.**

The Apollo is attractively finished in matt black. It opens the doors to world communication to both, the Hobbyist and the Professionals alike. With baud rates varying from 300/300 Originate and Answer, 1200/75 and 75/1200 full duplex and 1200/1200 half duplex, virtually all the popular tele-services can be accessed. A comprehensive Comms ROM oversees the use of the APOLLO, providing simple commands for all the software controlled facilities. APOLLO is an ideal modem for both the first time buyer and the seasoned user. Join the Telecommunications Revolution – Buy a Watford APOLLO!

VIEW PRINTER DRIVER ROM

View is a powerful word processor, but until now has seriously lacked in terms of printer support. With the launch of our Printer Driver ROM, which includes an extremely powerful and easy to use Printer Driver Generator, View users can find themselves in the realms of advanced word processing only at a small outlay.

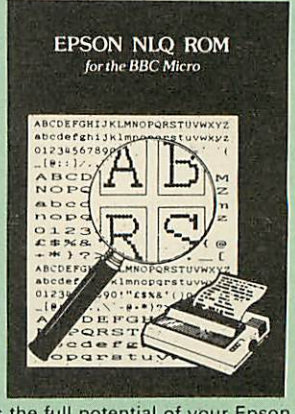

The VPD extends View's printer command with a series of mnemonic commands. All standard highlight sequences are also supported. A large range of printers are supported by drivers contained within the ROM (the drivers can be downloaded and customised). Printers supported include: Epson's MX, RX, FX, FX, LX, JX80 range, HI80, KP810/910, PW1080, JP101, HR15, M1009, GLP, JUKI 6100, etc.

Other printers are readily supported by defining a Printer Driver using the built in Printer Driver Generator. The features mentioned below are available to both the built in Printer Drivers and user defined drivers (assuming the printer supports the features).

NLQ control, Underline, Bold, Proportional Spacing, Microspacing, Italic, Superscript, Subscript, Condensed, Enlarged, Double Strike, Set lines per inch numerically (e.g. LPI 6), Set characters per inch numerically (e.g. CPI 5), Select printer font, Select printer ribbon colour, Translation sequences, Emulation of BBC Character Set, Simple numeric expressions for certain operations, Full printer setup, Send control codes, Print prompt on screen, Redefinable Pad character, Pause for key press, Prompt to change daisywheel, and Execute * command when printing.

Other features include a very powerful on screen preview, with bold, italic, underline, super/subscript, enlarged highlights, and a special printer driver to allow memory based text to be previewed by View 1.4. Of course, View 1.4, 2.1 and 3.0 are all supported, as is Shadow RAM and 6502 Second Processors. The BBC B series and Master series of micros are supported. A comprehensive manual is supplied. All in all, a very professional product for the discerning user who wants power at their finger tips. (Write in for a detailed leaflet).

Price: Only £33

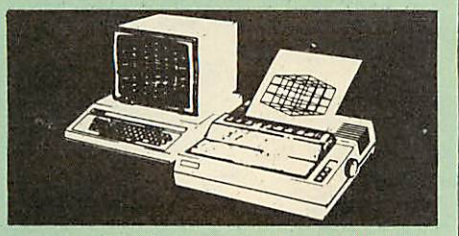

Harness the full potential of your Epson RX or FX printer. The NLQ ROM makes Epson printers produce Near Letter Quality output with optional proportional spacing, enlarged and underlined. Accessed by simple * commands from Basic, Wordwise and View (with driver) or almost any other language.

(Send an SAE for sample printout)

Only: £25

VIEW PRINTER DRIVER for NLQ ROM £7

DUMPOUT 3

A highly sophisticated screen dump ROM. This has to be the most flexible and powerful screen dump ROM yet produced for the BBC micro. It will put on paper anything you see on the screen, including full Mode 7 graphics. Also provided are window setting utilities and OSWORD calls to plot and read Mode 7 graphics pixels.

Facilities:

- *Vertical and horizontal scaling in all graphics modes and mode 7*
- *Rotation of image by 90, 180 or 270 degrees*
- *Left hand margin setting*
- *Screen dump window setting*
- *Colours appear as grey scale*
- *Two tone fast dump*
- *Colour mask*
- *Mode 7 contrast expansion*
- *Mode 7 contiguous dump*
- *Key triggered and User Port triggered dumps*

The Micro User Feb. 1985.
'Without reservation I wholeheartedly recommend the Dump Out 3 ROM as the ultimate screen dump facility for the BBC Micro . . . it must represent excellent value for money and surely cannot be beaten".

For use with the following printers:

GLP, GP80/100/250, CANNON, STAR, KAGA/TAXAN, NEC, SHINWA CP80, GEMINI, EPSON MX/RX/FX, M1009, NEC PC8023, DMP100/200/400, Panasonic KX1080, Mannesman Tally and compatibles.

Only: £25

(Write in for further details on all above ROMS)

THE EUREKA CARD

(The Unique RAM Expansion System)

The Eureka Card is Watford's latest and most sophisticated RAM expansion system. Using advanced PAL based technology this card is a breakthrough in RAM systems for the BBC micro. The Eureka Card provides the user with around 58K of free memory in Basic, VIEW and WORDWISE PLUS. You also get Shadow RAM from within the active language. No other RAM expansion system can match that!

Load up to 58K long Basic programs. Texts in VIEW and WORDWISE PLUS up to 58K as well. This with absolutely NO loss of speed in accessing your text or program. Eureka consists of a card containing 64K of program memory, two parallel banks of sideways RAM and some extremely complex switching circuitry. This is all controlled by Eureka's highly sofisticated software supplied in ROM. Designed to a very high specification, this board is fully buffered to give reliable operation under virtually any circumstances.

The Eureka board plugs into the 6502 socket and has NO messy flying leads. It is compatible with many other products from Watford, such as our Solderless ROM Board and our ROM/RAM Board. All in all, the Eureka Card is an amazing board. Jump into the age of serious data processing with a Eureka Card! Please write in for further details 'on advantages the Eureka can offer you'.

Introductory price: Only **£89** (carr £3)

(P.S. Eureka is only suitable for a standard model B; it normally replaces any Shadow RAM cards present. Some speed degredation does occur with filing system access. Eureka cannot be used at the same time as a second processor).

BEEBMON

The most powerful machine code monitor for the BBC Micro **£24.**

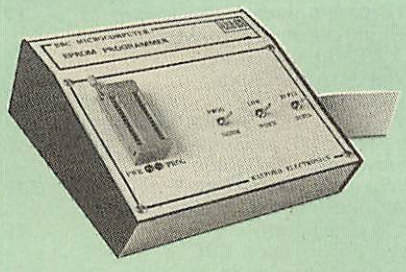

THE NLQ DESIGNER

(The First & still the Best)
Supplied with over 25 Different fonts

A massively useful utility for users of the Taxan/Kaga KP810/910 or the Canon PW1080. This program allows you to define NLQ character sets to download into the printer's memory. Full on screen editing of the font. Requires 6264 RAM chip to be fitted in the printer.
Supplied with disc containing over 25 example fonts. Please specify 40 or 80 track. Fonts are: Italic, Courier, Courier Italic, Script, Copper Plate, Shadow, Bold, Double Print and Gothic etc. (P.S. This ROM is not suitable for Epson printers.)

- *NLQ Designer ROM & FONT Disc* ***£25***

ADDER

Adder is the ultimate EPROM programmer for the BBC Micro. It will program many different EPROMs up to the very latest 27256 32K devices.
The Adder unit connects to the User Port and draws its power from there too. The EPROM is mounted in a top quality ZIF socket. There are no switches or controls as Adder is entirely software controlled.
The Adder software provides sophisticated facilities for programming EPROMs from a RAM image produced by loading disc files. The software is menu driven and designed for ease of use.
Features:

- Two ultra fast programming algorithms or standard slow algorithm.
- Supports standard 21V programming and newer 12.5 volt EPROMs. (Software switched).
- The RAM image to be programmed can be built up in many ways. Sections of image can be loaded separately. Part programming. Read EPROM. Edit data in memory.
- Automatic processing to handle a list of files to program into the EPROM.
- Automatic disc buffering to allow programming of 32K 27256 devices from a 32K file without extra effort.
- Verification gives detailed error list and checksums are maintained. There is also a blank check facility.
- Works with all standard filing systems. Generates header code for RFS ROMs to allow Basic programs etc. to be stored in EPROM. More than one file per ROM permitted.
- Programs the following EPROMs: From 2K to 32K: 2516, 2716, 2532, 2732, 2764, 2764A, 27128, 27128A, 27256 (Both 12.5V and 21V).

£65 (£3 Carr)

TEX EPROM ERASERS

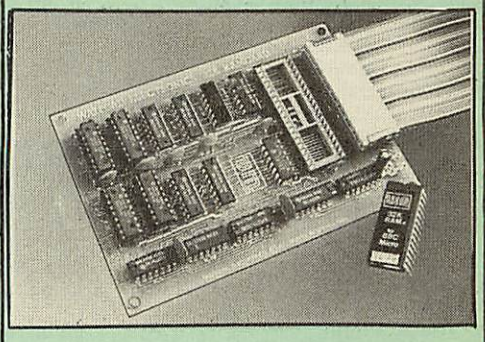

EPROMs need careful treatment if they are to survive their expected lifetime. Over erasure of EPROMs very rapidly turns them into ROMs! The TEX erasers operate following the manufacturers specifications to give the maximum possible working life by not erasing too fast. We use these erasers for all our own erasing work.

- **ERASER EB** – Standard version erases up to 16 chips. **£28** (carr £2)
- **ERASER GT** – Deluxe version erases up to 18 chips. Has automatic safety cut-off to switch off the UV lamp when opened. **£30** (carr £2)
- Spare UV tubes. **£9**

32K

SHADOW RAM- Printer Buffer

Expansion Board

A MUST FOR WORD PROCESSING

Watford Electronics now brings you the latest state-of-the-art MEMORY EXPANSION BOARD for your BBC microcomputer. Don't throw away your BBC B for a BBC B Plus or BBC Master. Just plug the ribbon cable into the 6502 processor socket, and fit the compact board inside the computer. Immediately you will gain not 16K or even 20K, but a massive 32K of extra RAM!!!

- IMPROVE your WORD PROCESSING system, whether disc or cassette based. Don't wait for a slow printer – type in text while printing. TWO JOBS DONE SIMULTANEOUSLY and £100+ saved on a printer buffer.

- "VIEW" Wordprocessor users can now type in letters in 80 columns and have up to 28,000 bytes free – 5 times as much as normal.

- In WORDWISE (or WORDWISE-PLUS), preview in 80 columns with the full 24K of text in memory. This product is recommended as an ideal complement by Computer Concepts.

- Combine GOOD GRAPHICS and LONG PROGRAMS. Use the top 20K of the expansion RAM as the screen display memory, leaving all the standard BBC RAM free for programs. Benefit from MODE 0/1/2 graphics and 28K of program space.

- Use the FULL 32K or the bottom 12K of the expansion RAM as a PRINTER buffer for PARALLEL or SERIAL printers, sound channels, RS423 etc. Print large text files while running long graphics programs, and have all your buffer options available as well (*FX15,21,138,145,ADVAL etc). Please note only a 12K printer buffer can be used with Wordwise or Wordwise-Plus, due to the way they are written.

- Unique facility to turn ROMs off and on again. Unlike all other ROM managers, this feature does not use 'unofficial' memory. Two bytes of normally user-inaccessible memory on the RAM card are used to ensure ROMs are disabled WHERE OTHER ROMS FAIL.

See next page for SPECIAL OFFER

Only £59 (carr £2)

(Price includes a comprehensive manual and the ROM)

INCREDIBLE WORDPROCESSING DEAL

- PERIOD TABLE SOFTWARE **£20**
- USING YOUR COMPUTER (Cassette) 8-12 age **£24**

BEEB VIDEO DIGITISER

Using any source of composite video (colour or monochrome) and the Watford Beeb Video Digitiser, you can convert an image from your camera into a graphics screen on the BBC Micro.

This uses the full graphics capacity of the BBC micro in modes 0, 1 or 2. The video source may be a camera, video recorder or television, and is connected via the video output socket.

Images produced can be compressed, stored to disc, printed on an Epson compatible printer, directly used to generate graphics, analysed for scientific and educational use or converted to other formats e.g. Slow Scan TV or receiving a picture from a remote camera using a modem.

The output from the digitiser exactly matches the graphics capability in each mode, with up to 8 levels of grey in mode 2. The unit connects into the User Port and automatically scans a complete picture in 1.6 seconds.

Both the black and white levels can be adjusted manually for the optimum picture, or switched to automatic for unattended use. The image produced can be reversed if necessary.

Full controlling software is supplied on a normal sideways ROM and this is easily accessed via additional * commands. The package is designed to allow easy input of complex screens and give full access of the data to the user. Once on the screen, the image can be used as a normal graphics screen, allowing any of the usual graphics commands in BASIC or other ROM's to work on it.

A special print dump routine is included with the driver programs. This is specially designed to produce a fast, correctly proportioned picture, with reduced "contouring", resulting in an accurate reproduction of the original image.

Detailed examples of driving this unit from BASIC or other languages are all provided in the extensive manual supplied.

£109 (Carr. £3)

(Price includes) Digitiser Unit, Software in ROM & a Comprehensive Manual)
(BBC B+ and Master compatible, except Master with Econet)

Magazine Maker

(As seen on TV)
A combination of the AMX Pagemaker and Watford's Beeb Video Digitiser.

Using any video that provides a composite signal and the digitiser, images from a camera or TV can be converted into a graphics screen on the BBC Micro.

They can then be used within AMX Pagemaker to illustrate magazines or newsletters – in fact anything that needs to be created on A4 size paper.

With Pagemaker's many features, a variety of pictures can be composed – the only limit being the imagination.

Pictures can be doctored using Pagemaker's graphics option to produce any number of effects.

Text can be formatted around the digitised photo on screen using the facilities available, which include 16 typefaces, character and pattern definer, text formatting and the ability to load in wordwise and viewfiles plus much more.

Once created the picture can be printed out.

The Magazine Maker is suitable for any use that requires illustrated documents.

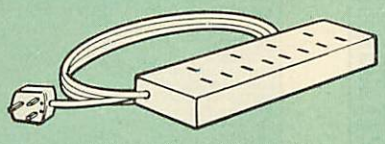

Complete Package **£129.00** (carr. £3)

SURGE PROTECTOR Plug

Fitted in place of your normal mains plug, this device protects your equipment against mains surges. Nearby lightning strikes, thermostats switching and many other sources which put high voltage transient spikes on to the mains. This can lead to data corruption in memory and on disc and can result in spuriously crashing machines. A must for every computer user.

Protection for only **£7.50**

4 WAY MAINS DISTRIBUTION SOCKET

4 way top quality mains trailing sockets. Supplied wired up with mains plug ready for use. Can be screwed to floor or wall if required. Very useful for tidying up all the mains leads from your peripherals.

£7.95 (carr £1.50)

SPIKES CLEANER UNIT

A 4 way mains distribution unit as above with a built-in Surge Arrester, providing protection for your complete computer system

£12.50 (carr. £1.50)

PCB BY CAD

Drawing up complex circuit boards can be a chore. Computer aided design makes your life easier

Joe Telford

Have you ever looked through those other glossy mags on sale alongside *Acorn User*, the electronics monthlies? Have you ever wondered how Acorn plug all those chips on the green boards inside their computers?

Those green printed circuit boards (PCBs) are glass fibre or resin boards on to which components are soldered to make any electronic circuit, including the BBC micro. There are two sides to each PCB, the component side with the resistors, capacitors and chips and the track side, where the lines on the board are. Normally, the components are mounted by pushing their leads through tiny drilled holes in the board, and then these leads are soldered to the copper lines on the track side to make a circuit.

Some complex boards have lines or tracks on both sides of the board, and the most complex types have more tracks buried inside the board too. The tracks are the 'wires' that join the components together. Obviously the layout of the tracks varies for different electronic circuits, so a new PCB must be designed for every new type of circuit you wish to build. To get round this, some manufacturers have designed special boards like Veroboard. This has lots of parallel tracks at 0.1-inch intervals, and lots of pre-drilled holes along each track. Such boards are quite useful for building prototype circuits, but enthusiasts recommend a specially designed PCB for the most reliable results.

The problem

Many people are put off using printed circuit boards because they appear difficult to make. But the main problem is the actual design of the board and its layout of copper tracks. This is where you can put your BBC micro to good use.

Figure 1 shows you how to produce a PCB. The computer design element is only

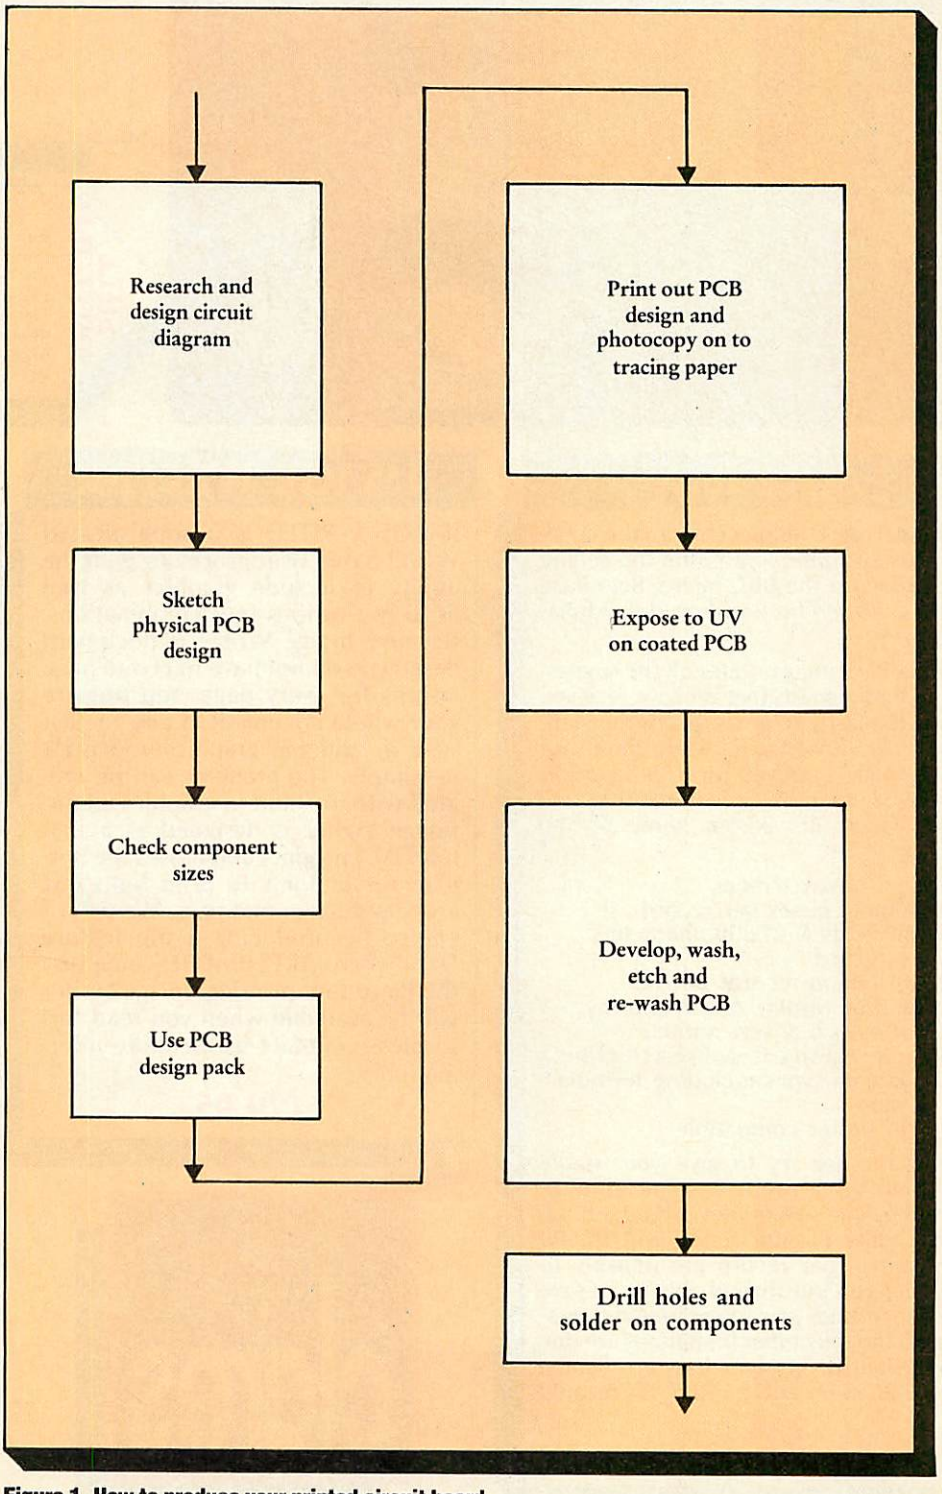

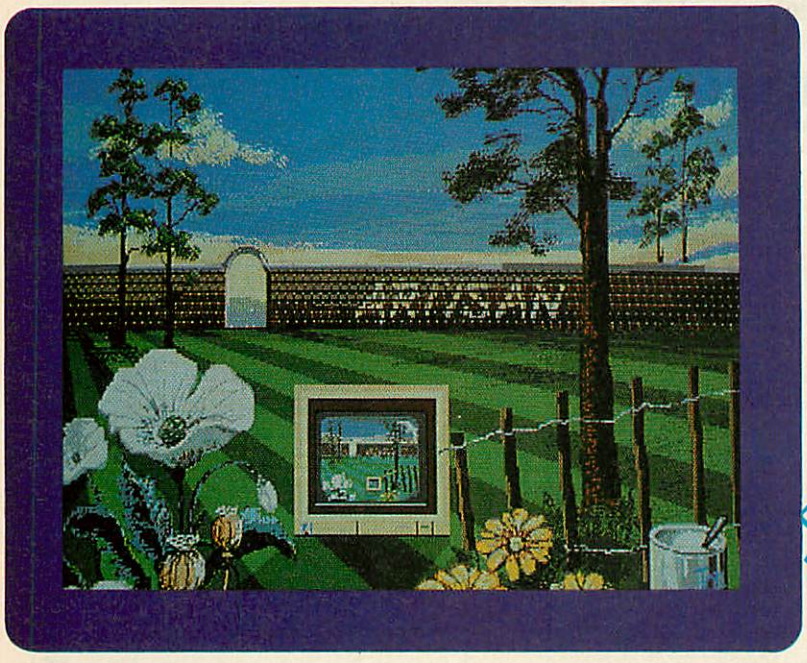

Figure 1. How to produce your printed circuit board

Archimedes
HARNESS THE POWER

A computer like ARCHIMEDES needs software that can match its outstanding capabilities. Our new products do just that and one of the first areas that you will want to explore is the graphics capability. ARTISAN, from the authors of ARTROOM, is the ultimate in graphics packages. Just take a look at the screen shot reproduced here, as they say 'a picture is worth a thousand words'. We can't describe all the features here but some major functions are:

- Full screen
- Fast multi level scrolling zoom
- Image distortion
- WIMP environment
- Magic brush
- ECF designer

Plus all the usual features and some very unusual ones too.

£39.95

PICTURE THIS

—COMPETITION—

Can you do better than the picture shown here? If so you could win yourself a unique prize. If yours is judged to be the best picture then your masterpiece will be transferred to canvas by our artist Jon Warmisham (BA Hons Fine Art). The competition is open ended but the best picture each month will be featured in ACORN USER and a monthly prize will be awarded. Full details are contained in the ARTISAN pack.

Alpha-Base

Alpha-Base is the successor to the hugely successful Beta-Base, the top selling database for the BBC micro. Beta-Base files can even be transferred to Alpha-Base.

Alpha-Base incorporates all the suggestions and requests that we have received over the last five years. All of the standard Beta-Base facilities are there but in a much improved form. In addition there are many new features that will make your life easier. Some of the features are:

- Free format screens
- Multiple pages per record
- 400 fields & 27,600 characters per record
- 2.14 billion records per file
- Multiple display & entry forms
- Fast search & sort options
- Plain English entry of search criteria
- Five data types including formula & date
- Winchester compatible

At Clares we try to give you usable programs. This results in some arbitrary limits on the size of files in Alpha-Base. The limits of 400 fields and 27,600 characters per record are unlikely to restrict you but they enable us to save memory and provide additional features. The only other limitations are due to the hardware. Alpha-Base can handle 2.14 billion records but the ADFS can't!

£49.95

IMAGE WRITER

IMAGE WRITER is a sophisticated WIMP based wordprocessor with the ability to include graphics as well as to use various font combinations. Because Image Writer is document based you do not have to create page layouts for every page. You prepare your whole document in one go. Just type it, add the graphics and print it—simple. The graphics can be created with the built in graphics editor. Image Writer is designed as a first level DTP product and it uses the normal printer fonts to print both text and graphics in one pass. We will of course be producing a full feature DTP when ARCHIMEDES supports the fancy font printing. Image Writer will be available when you read this so please contact us for more information.

£29.95

ARCHIMEDES TOOLKIT MODULE

ATM is the first toolkit available for this powerful new micro. Many of the features that made RAMROD a top seller have been incorporated into ATM and a whole host of new features have been added including:

- 10 Memory and disc editors
- 8 Memory and disc searches (inc. wildcards)
- A scrolling disassembler
- A one line assembler (accessed from the disassembler)
- Shift and compare functions
- Catall and Exall for discs
- Winchester compatible

If you want to explore your ARC then order the ARCHIMEDES TOOLKIT MODULE today. It has enabled us to disassemble modules, discover many undocumented SWI calls and has been an invaluable aid in debugging software. You can even search for mnemonics.

one section of the whole process. Let's start by taking a problem and show how a PCB was designed to help solve it.

Beep, beep, beep, beep; the strains of an electronic keyboard hummed through Telford Towers. 'Very good, my dear,' said her ladyship, 'but not quite in time.' My daughter asked, 'Dad, how can I play in time?' Now the average metronome costs two arms and a leg, and so that was out. One alternative was to press the BBC micro into action. I would have used the micro but for the fact that there was every chance my daughter would be learning to play her keyboard for quite some time.

The answer was clear; build a metronome. First, I found a suitable electronic circuit. I decided that she wanted a device that would tick loudly at regular intervals and I soon found a couple of circuits which promised to do that. Cost being ever close to my heart, I soon discovered the 555 timer chip which costs 17 pence in our local high street. The second stage was to alter the circuit to match my needs. This produced the circuit diagram of figure 2.

Because I believe in reliability and tidy circuitry, I decided to go for a PCB version, and this led to figure 3, which is the circuit diagram in a physical form which closely matches the way that the real PCB components are mounted. I made a list of component sizes and orientations, then set about designing the PCB tracks. This itself was made difficult because designing in indelible felt-tip pen, on copper, in mirror image is not my strong point. It has to be mirror image because all the diagrams show the circuit from the component side – the copper tracks are in reality underneath the board. Now I had another problem – how to make a neat and accurate PCB which could be replicated? It's possible to buy copper-clad boards for PCB production which are covered with a light-sensitive emulsion. Circuit diagrams drawn on tracing paper can be copied on to the board by long exposures to sunlight or shorter exposures (four-and-a-half minutes), to an ultraviolet lamp. This meant that I could design the PCB on drafting film or greaseproof paper the right way round, then reverse it in the exposure stage. I decided to use the BBC Master to develop a design package which would handle most simple PCB computer aided work.

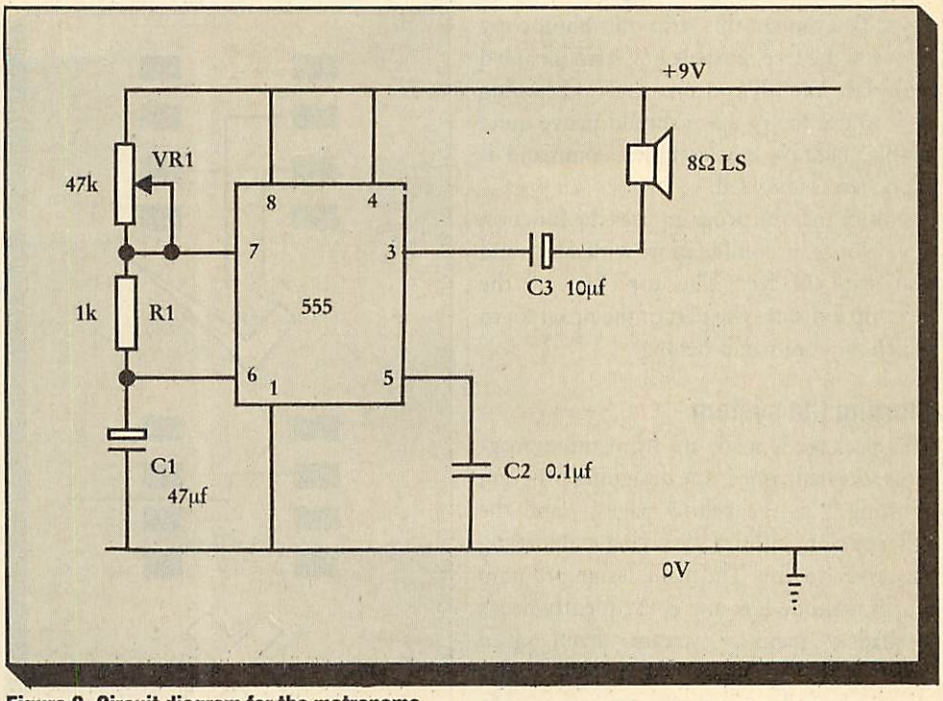

Figure 2. Circuit diagram for the metronome

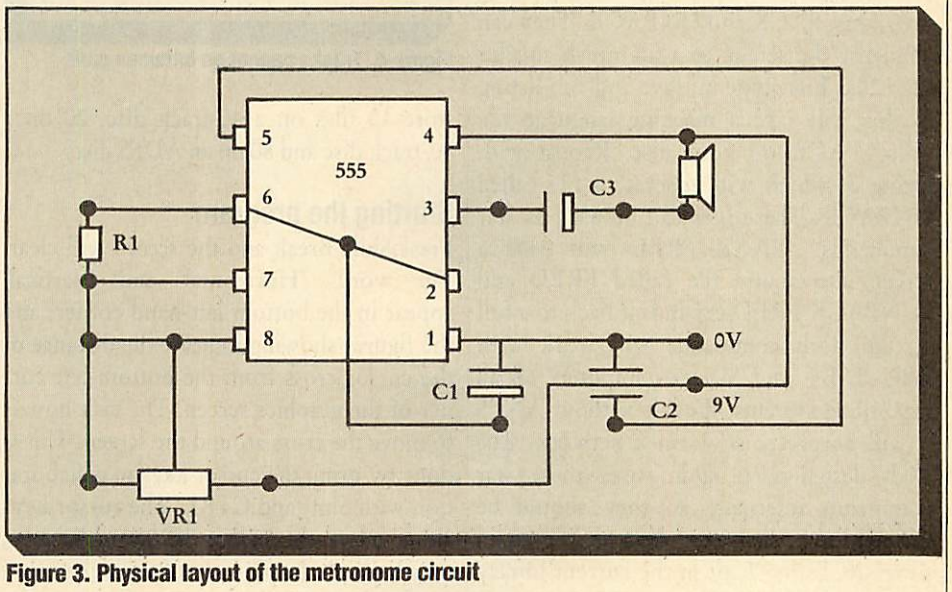

Figure 3. Physical layout of the metronome circuit

Major specifications

The PCB package specifications included the following:

- Be able to produce PCBs actual size
- Designs should be printed out on printer paper for further manipulation or on tracing paper (using dark ink ribbons)
- Maximum size of board to be designed is 7.5 inches by six inches
- Built-in grids of 0.05, 0.1, 0.5, 0.1, 0.5 and one inch
- Two pad sizes - small (IC size) and large for soldering big components
- Two track widths - thin for ICs and thick for higher currents
- Special preset patterns for eight, 14, 16, 28-pin ICs
- Text use
- Screen manipulations – copy or move areas, reflect horizontally or vertically
- Editing of tracks, pads and areas to correct mistakes.
- Save and load designs to disc.

This package should cope with most day to day PCB design requirements, certainly up to GCSE level in school. However, there are a couple of things which it won't handle. The biggest omission is that tracks cannot travel in between IC pads, although they can travel under ICs, as shown in figure 4. The other omission is in multi-layering. The program will only handle one layer of track at a time. If we needed to produce a board with tracks on both sides, then the approach would have to be to do two separate designs and bring them together outside the computer. Complex requirements like this would usually merit buying one of the specialist PCB design packs from firms like Plotmate or Pineapple.

Figure 8 is the function key strip for the use of this overlay plus a few keyboard

keys. You can cut this strip out, photocopy it, or use the free reusable key strip included with last month's *Acorn User*. Learning how to use the package should prove quite simple, because any complex command is explained as it is used.

Notice that the program uses the function keys alone, in combination with Shift and also with CTRL. The top line of the keystrip indicates the part of the program to which the commands belong.

Starting the system

This package is made up from three programs; the main one is the designing program – listing 1 in the yellow pages – and the other two are utilities for saving and loading the screen to disc. The main design program works in mode 128, and consequently needs a shadow memory stream. Each saved screen would normally take up 20k of disc space. The utility programs are source code for standard screen packing and unpacking programs, PACK and UNPACK. They can condense the screen to a file much smaller than 20k. First type in, save and run listing 2; this will save a machine language file called PACK on your disc. Repeat with listing 3, which will generate a file called UNPACK. These files can be used as star commands. *PACK FRED will pack a screen into a disc file called FRED and *UNPACK FRED expands it back to a full screen. Both commands will work with BBC B, B+ and Master computers on all legal filing systems, though without ANFS it will be pretty slow on a network. The PCB designing program uses these star commands internally so they should be included on the same disc as the main program, listing 1, or in the current library if you are using ADFS or NFS. Use them outside this package too, as they are entirely free-standing. They have much the same function as the LDPIC and SVPIC programmes published in *Acorn User* in October 1986, but now allow the use of the shadow screen as well.

When you have all the programs on disc, you could configure a disc specially for PCB designs. First, format a disc, then copy *PACK/UNPACK and the design program, which we'll call TRACK. Add a !BOOT file as follows:

```
*BUILD !BOOT
0001 MODE 128:CH. "TRACK"
0002
ESCAPE
*OPT4, 3
```

Now the program will operate when you boot the disc using Shift-Break. We can

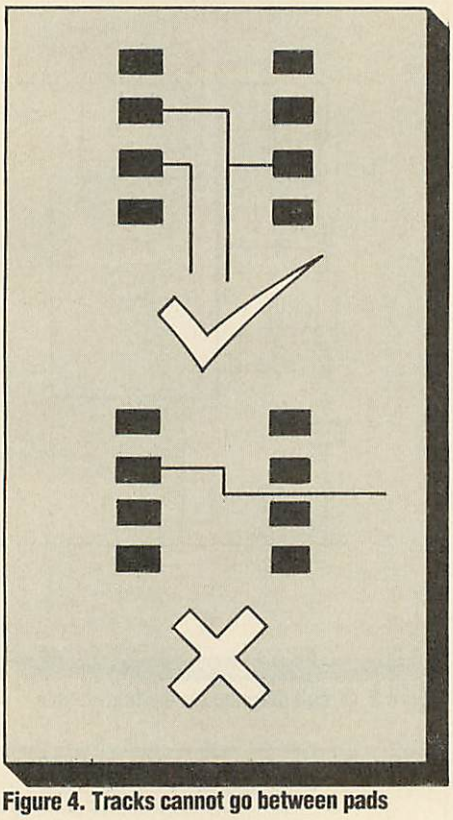

Figure 4. Tracks cannot go between pads

store 10 files on a 40-track disc, 20 on a 80-track disc and 80 on an ADFS disc.

Starting the program

Press Shift-Break and the screen will clear. The words 'Horizontal' and 'Vertical' appear in the bottom left-hand corner, and the figures showing indicate the distance of the cursor cross from the bottom-left corner of the graphics screen. The task now is to move the cross around the screen. This is done by using the cursor keys in collaboration with Shift and CTRL. The cursor keys alone move the cursor in 0.1-inch steps, which match the pin-outs of a wide range of electronic components. For faster movement the Shift key moves the cursor in one-inch increments, and the Shift-CTRL keys together move it in 0.5-inch steps. For extra precision, the CTRL key enables the cursor to move in 0.05-inch gaps.

The main drawing commands to draw tracks are allocated the first three function keys. The easiest to use are f1 and Shift-f1. Function key 1 immediately draws a small pad (about IC size), at the cursor point. Shift-f1 draws a larger pad, which is useful for soldering in bigger components or sockets. Tracks are drawn by pressing either f0 for thin lines or Shift-f0 for thick lines. Just above the horizontal/vertical indicator, is a blank line which the system uses to guide people through the more complex commands. In the case of track drawing, the following sequence is followed:

- Press f0 or Shift-f0
- Message says 'Move to line start and press S'
- Do this
- Prompt then says 'Move to line end and press E'
- Do this; the cursor leaves a 'ghost' line as you move
- Pressing E draws the line as thin or thick as selected

Drawing-in text is a similar multi-stage process. On pressing CTRL-f0, the message 'Type text then press Return' appears. This generates a 'ghost' rectangle on screen, which can be moved around. The message 'press SPACE to fix' indicates how the text can be finalised on screen.

Special drawing commands

Shift-f2 generates a message 'Type code:', and this means type a mnemonic from the following list:

8PINV 8PINH 14PINV 14PINH JOINS
16PINV 16PINH 28PINV 28PINH JOINL

Figure 5 shows most of the shapes generated by each command. The two odd ones are the JOIN commands. These generate tracks, but starting from the current cursor position and hence requiring only an 'E' to fix them. The last 'special' command can be repeated by pressing f2 without the Shift key. Advanced users will quickly appreciate the benefits of using f2 repeatedly with JOINS and then drawing tracks by repeatedly pressing f2. This also automatically

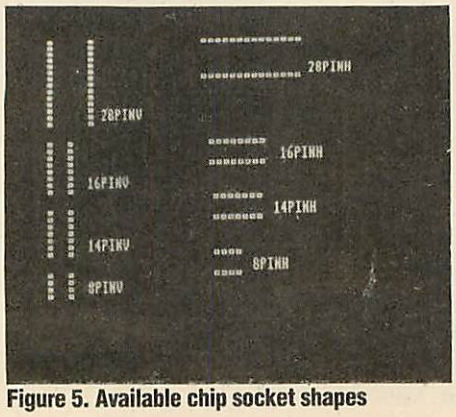

Figure 5. Available chip socket shapes

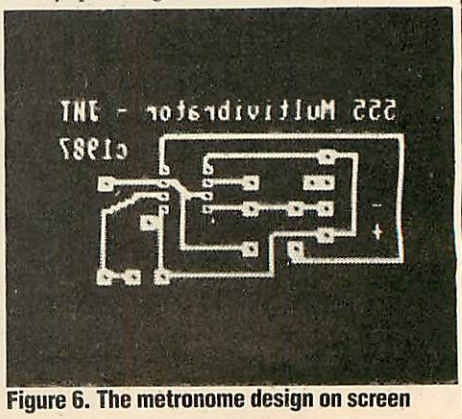

Figure 6. The metronome design on screen

generates the 'E' to end a line then starts a new line. This means a sequence of lines can be drawn with just the cursor keys and f2, then at the very end, a final press on 'E' concludes that track.

The erase commands

Erasing parts of the screen is the only way of editing it. The simplest commands are f4 and Shift-f4, which delete small and large pads respectively. CTRL-f4 gives a warning, then clears the whole screen, effectively giving you a new PCB to use. Both f3 and Shift-f3 behave exactly like f0 and Shift-f0, erasing instead of drawing, though I generally tend to use only Shift-f0, which wipes out thin or thick lines. CTRL-f3 erases a rectangular area of screen, and gives simple instructions for the user to follow in setting up the rectangle.

Screen manipulation is performed by function keys f5 and f6. Function key f5 gives instructions on how to mark a rectangular area, and Shift-f5 lets you move or copy this area to another part of the screen, again accompanied by instructions in the lower area of the screen. Function key f6 marks an area, allows its movement or copying to another part of the screen, and then reflects the rectangle horizontally. For example, text should be inverted to look like mirror writing. This is useful because it means that text on the track side of a PCB can be read once the tracks themselves are inverted during the exposure process. Shift-f6 performs the same task as f6, except that the reflection is in the vertical axis rather than the horizontal.

Both f7 and f8 cause the current screen to be dumped to an Epson-compatible printer. This is done in Basic, and so is slow, but allows the Escape key to be active during the dumping. Again there are prompts at the bottom of the screen. CTRL-f7 displays a catalogue of the current disc. At first sight this is quite worrying, because the PCB design vanishes, but it is in fact saved in a file called 'TEMP', and after the catalogue the PCB design is packed back in. CTRL-f8 allows files to be deleted, so I recommend locking the three main program files. Shift-f7 and Shift-f8 load and save the PCB design to disc. They too are supported by instructions, and the *CAT function can be called from within them.

Remember that the program will not redraw what you delete or cover-up. This means that you should inspect the design for partly deleted pads, or pads without drilling points. This occasionally happens because of the way the program draws and erases tracks. When using the program, remember that Escape will abort almost any action, but it may need a second press to restore the cursor. Filing system errors have not all been trapped, so if you have problems, hunt out DEF PROCerr and add your specific error trapping routines.

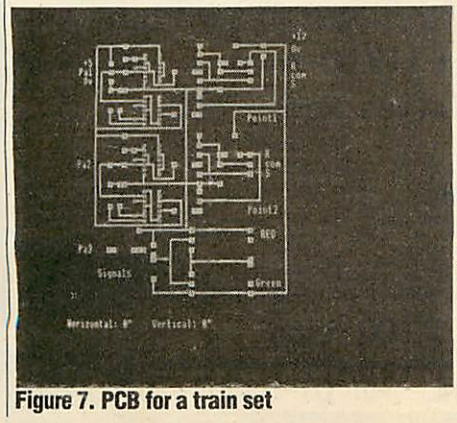

Figure 7. PCB for a train set

Making the board

With the design program complete, I progressed to figure 6 which is the final screen for the metronome PCB. The finished printout is often just a bit too faint to work efficiently, so it can be photocopied onto drafting film or tracing paper to darken it. Next the light-sensitive copper-clad board is placed under the tracing paper, with the printed side of the paper side in contact with the board. They are then exposed to ultra-violet light for four-and-a-half minutes. The exposure is quite critical, and for safety's sake I use a light box which protects users from the ultra-violet rays. There should be instructions available with the circuit board about how long an exposure is necessary, and some types can even be exposed with sunlight.

Next the board can be developed in a bath of caustic soda. This is harmful to the skin, so again take care! After a brief wash, the screen design is now firmly part of the copper board, and you can etch away the spare copper between the tracks using ferric chloride. This too is a poison, so take care. When the copper is etched, the board is washed and dried, then the holes in the pads drilled with a fine 0.8mm drill bit. The components are mounted by pushing their leads through the holes and soldering them into place. Add some power from a nine-volt battery and 'beep, tick, beep, tick, beep, tick. . . '

I wish I hadn't started, because the next project is the model train set, and the design pack is sufficiently accurate to produce figure 7. When will it all stop?

Details of Joe's listings can be found on the yellow pages index on page 113.

	DRAWING COMMANDS	ERASE COMMANDS	MANIPULATION COMMANDS	FILING COMMANDS	EXIT
	CTRL	WINDOW		CAT	
SHIFT	TEXT			DELETE	
THIN LINE	THICK LINE	WHOLE SCREEN		LOAD	
SMALL PAD	LARGE PAD		COPY/MOVE	SAVE	QUIT
DO SPECIAL	SET SPECIAL		MARK AREA	PRINTOUT	
THIN LINE	THICK LINE		VERTICAL REFLECT		
SMALL PAD	LARGE PAD		H'ZONTAL REFLECT

PINEAPPLE SOFTWARE

Programs for the BBC model B, B+, Master and Master Compact with disc drive

DIAGRAM II

Diagram II represents a major breakthrough in the techniques used for drawing software on the BBC micro. It works on a completely different principle to other drawing software by storing the drawing information straight to disc as coded 8*8 pixel blocks.

This technique has three major advantages. First, the size of the diagram is only limited by the amount of space on disc. Second, there is no limit to the amount of information which can be stored on a given diagram as the information is stored on disc and not in computer memory. Third, the disc storage technique allows the smooth scrolling of the screen over the whole surface of the diagram.

For people not familiar with Diagram, the basic operation of the program is to first display any part of the diagram, either by quoting an index name or screen number. At this point you are free to scroll the diagram around the screen using either cursor keys, trackerball or mouse. You may stop scrolling at any point and enter the edit mode which allows you to modify or add new information to the diagram. When you have finished making alterations, the new information is stored to disc and you are free to scroll elsewhere on the diagram stopping to edit at any time.

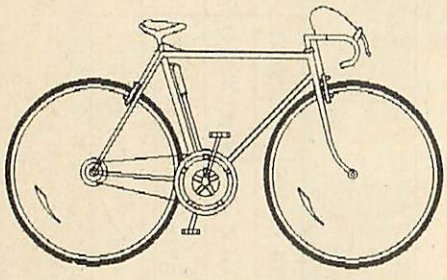

The edit features are now very comprehensive. Text may be typed straight from the keyboard, and if other fonts are stored as user defined characters then these fonts may be printed using the normal keyboard keys.

The print routines are now completely 'scaleable' with both the horizontal and vertical scales being totally variable in 1% steps between a size that will give 18 mode 0 screens on an A4 sheet and a size that would print just one pixel on a sheet! The routines are adaptable to most types of dot matrix printer and full advantage may be made of wide carriage printers. The printouts may be rotated through 90 deg. if required.

The new editing features make DIAGRAM II suitable for all types of serious drawing application including scale drawings, flow charts, architectural, family trees, and many other subjects as well as circuit and schematic diagrams. As an example of what Diagram II can do, this complete advertisement (with the exception of the PCB drawing) has been produced with the package.

SUMMARY of DIAGRAM II FEATURES

1. Works on any model BBC computer with either DFS or ADFS.(ADFS only if Shadow memory available).
2. Will automatically take advantage of shadow memory (any make) to provide more User Definable Characters, 880 with Shadow, 381 without Shadow.
3. Rapid horizontal and vertical line drawing routine with automatic joins for circuit diagrams.
4. Full rubber band line drawing and circle drawing modes.
5. Takes advantage of the Acorn GXR rom to provide drawing of arcs, sectors, chords, parallelograms, ellipses, and flood filling. Note this rom is already fitted to Master and Compact machines.
6. Pixel cursor drawing and deleting mode allows very fine detail to be added.
7. Defined areas of screen may be moved, copied, deleted or saved to disc.
8. On-screen indication of cursor position shows either the cursor position on the overall diagram or the distance from a preset point.
9. Keyboard keys may be predefined to print User Defined Characters, enabling new character sets to be stored as user defined characters and then printed straight to the screen using the keyboard keys.
10. Wordprocessor files may be loaded to the screen and automatically formatted into any shape screen area.
11. Index names may be set up to point to given areas of a large diagram, to enable rapid access to a given point on a diagram.
12. Fully compatible with Marconi trackerball and most makes of mouse.
13. All Diagram 'Utilities' are included, enabling screen ident numbers and borders to be added, and any area of diagram to be moved or copied. The whole diagram may be displayed in reduced scale (either 4*4 or 8*8 format) on a single screen, and the size of the overall diagram may be increased or decreased.
14. Completely scaleable print routines allow any area of the diagram to be printed either horizontally or through 90 deg. in scales that may be varied in 1% steps allowing up to 18 mode 0 screens to be printed on an A4 sheet (still with readable text).
15. Complete with 40 page easy to understand handbook.

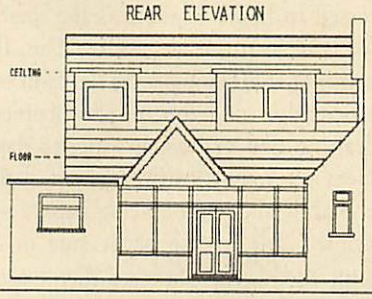

Diagram II consists of a set of disc files and a 16k Eprom. The disc supplied is formatted in 40T on side 0 and 80T on side 2. Please state if this is unsuitable for your system, or if you require a 3.5" Master Compact disc.

DIAGRAM II — £55.00 + vat

P & P free (except overseas)

N.B. Upgrades are available to existing Diagram owners. Please contact Pineapple if you have not received an upgrade letter.

PCB

Pineapple's now famous printed circuit board draughting aid produces complex double sided PCB's very rapidly using any model BBC micro and any FX compatible dot-matrix printer.

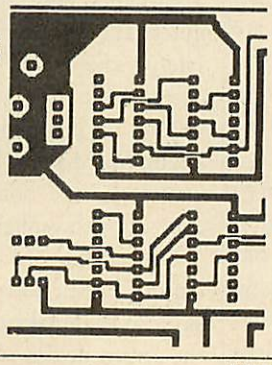

The program is supplied on Eprom and up to 500 component and 500 ASCII component descriptions may be stored for each PCB. There is no limit to the number of tracks that may be stored for a given PCB although the maximum board size is restricted to 8" * 5.6".

Using a mode 1 screen, tracks on the top side of the board are shown in red, while those on the underside are blue. Each side of the board may be shown individually or superimposed. A component placement screen allows component outlines to be drawn for silk screen purposes and component numbers and outlines entered on this screen may be displayed during track routing to aid identification of roundels.

The print routines allow separate printouts of each side of the PCB in a very accurate expanded definition 1:1 or 2:1 scale enabling direct contact printing to be used on resist covered copper clad board. The print routines are very fast taking typically 5 minutes for a 1:1 print of a 7" * 5" board.

This program has too many superb features to describe adequately here, so please write or 'phone for more information and sample printouts.

PRICE £85.00 + vat

PCB PLOTTER DRIVER

A new addition to the PCB software is the PCB plotter driver program. This enables files produced by PCB to be used in conjunction with most types of plotter to produce plotted output rather than the normal dot-matrix printer output.

In this way plots may be produced directly onto film or even directly onto copper board with an etch resistant pen if a suitable plotter is available. The program is suitable for use with most makes of plotter including Hewlett Packard, Hitachi and Plotmate M. The program can also be configured to work with other plotters by entering suitable plotter instructions.

All the features of the printer driver are included, such as the automatic thinning down of tracks between roundels. Mirror image plots are also available.

PRICE £35.00 + vat

MARCONI TRACKERBALL

This high quality device comes in three versions. Version one is for the standard BBC micro and comes with the Icon Artmaster drawing package from Micro-Draw, and Trackerball Utilities which allow the trackerball to be used with other software.

Version two is for the Master 128 computer and this comes with the Pointer Rom. This is a Rom which allows the Master to be configured for use with the Trackerball and has commands to enable the Trackerball to intercept the cursor key or joystick routines of other software. Commands are also available to reverse the axes of the trackerball and set the sensitivity. The three buttons may also be set up to produce any ASCII code.

Version three is simply the bare Trackerball which comes without software but is suitable for use with specially written software such as Diagram or Diagram II.

Trackerball adapters are also available which plug onto the end of the cable and convert the connections of the trackerball to be the same as a mouse. This enables the trackerball to drive all types of 'mouse' software.

For Model 'B' and B+ (with Icon Artmaster)	**£ 60.00 + vat**
For Master 128 (with Pointer Rom)	**£ 60.00 + vat**
Bare Trackerball (no software)	**£ 49.00 + vat**
Pointer Rom - available separately	**£ 12.50 + vat**
Trackerball to mouse adapters	**£ 8.00 + vat**
Postage & packing on Trackerballs	**£ 1.75**

MITEYSPICE

Miteyspice is a very powerful AC & DC circuit analysis package with graphics suitable for use with any model BBC micro including those with 2nd processors.

As well as all the usual facilities available with this type of program, non-linear effects, small signal, noise measurements and sweeps may be performed. Component values may be swept, allowing component tolerances to be investigated as well as thermal performance etc. Comprehensive transistor modelling is incorporated using a 20 parameter Ebers Moll description. The program is supplied on disc with a very comprehensive 49 page manual.

PRICE £119.00 + vat

ADFS Utilities Rom — ADU

ADU is an invaluable utility for all ADFS users. It adds over 20 new *commands to the ADFS filing system as well as providing an extensive Menu facility with over 35 sub commands covering areas such as repeated disc compaction, saving and loading Rom images, auto booting of files and many more.

Copying of DFS discs onto ADFS discs can be made in one pass with automatic creation of the required directories on the ADFS disc. All functions are fully compatible with Winchester drives including *BACKUP which allows backing up of Winchesters onto multiple floppies.

Additional *commands include:- *ADU, *BACKUP, *CATALL, *CHANGE, *DFSDFS, *DIRALL, *DIRCOPY, *DIRDESTROY, *DIRRENAME, *DISCEDIT, *DRIVE, *FILEFIND, *FORMAT, *KILLADU, *LOCK, *MENU, *PURGE, *PWRBRK, *UNLOCK, *VERIFY, *VFORMAT.

PRICE £29.00 + vat

THE NEW AMX MK. III MOUSE. TRAP ONE SOON.

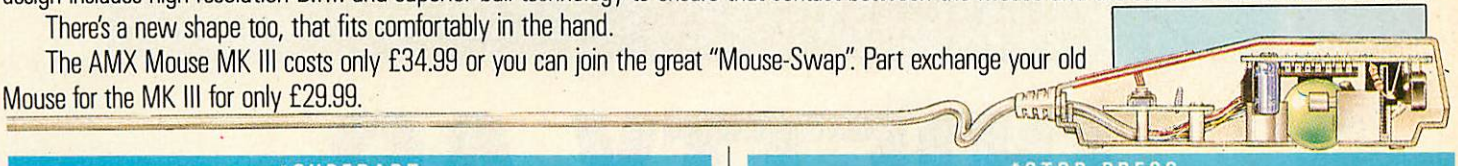

The MK III AMX Mouse is a product of Swiss precision and the result of a world-wide search to find a worthy successor to the AMX Mouse MK II.

The new Mouse has been specifically chosen to be the perfect partner to the ever expanding range of AMX software. The unique patented design includes high resolution D.P.I. and superior ball technology to ensure that contact between the Mouse and the surface is constant at all times.

There's a new shape too, that fits comfortably in the hand.

The AMX Mouse MK III costs only £34.99 or you can join the great "Mouse-Swap". Part exchange your old Mouse for the MK III for only £29.99.

*SUPERART

AMX MOUSE MK III PLUS SUPERART 16K ROM, PLUS DISC £79.99

Acknowledged as the most sophisticated, yet easy to use paint package available for the BBC Micro, it's no wonder over 20,000 have already been sold.

'Superart' features include cut, copy, paste, move, rotate, plus many, many more such as fantastic spray and zoom facilities.

Available for BBC B, B+; Master 128, and Master Compact. Please state which version is required when ordering.

SUPERART (ONLY) £49.99

PICTURE GALLERY 2 × FLIPPY DISC £24.99

Instant art! A collection of fine drawings produced by acclaimed artists using superart.

*STOP PRESS

AMX MOUSE PLUS STOP PRESS 2×16K ROM, 2×DISC £79.99

The most highly acclaimed desktop publishing software available for the BBC Micro. Already thousands of users are producing professional documents, newsletters, flyposters etc. in fact anything where text and graphics are required.

'Stop Press' comes complete with 16 variable typefaces.

Available for the BBC, B+ and Master 128. Please state which version is required when ordering.

STOP PRESS (ONLY) £49.99

EXTRA! EXTRA! 2 × FLIPPY DISC £24.99

300K fantastic clip art, over 25 fonts and utility software.

*MAX 16K ROM £19.99

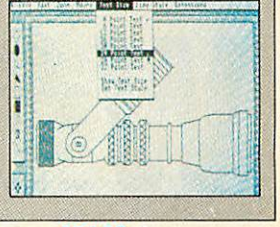

MAX provides an easy to use graphic based front end to your computer's disc filing system including a comprehensive set of disc management operations such as cataloging, copying, deleting and re-naming. You can also run programs from within MAX. Available for the BBC, B+, Master 128 and Master Compact. Please state which version is required.

*AMX DESIGN 32K ROM AND DISC £69.99

A highly sophisticated CAD package which allows the user drawings to be produced such as a simple PCB design up to the most intricate, architectural drawing.

Advanced features include full zoom and macro facilities, 58×58 screen canvas, full supported printer and plotter output. Available for the BBC, B+, Master 128 and Master Compact.

FANTASTIC AMX SOFTWARE OFFER!

The additional AMX Software range that requires the original AMX Art Rom or Super Art Rom including: 3D Zicon normal price £24.99 Database normal price £24.99 XAM normal price £24.99 MindGames normal price £14.99. Total price – £89.96 but now available as a complete package at only £69.99.

These superb products are available from all good computer dealers or direct by Cheque, Access or Visa. All prices include VAT and post and packaging.

FOR INSTANT ACCESS, VISA ORDERS TELEPHONE (0925) 413501/2/3

* ALL THESE PROGRAMS WORK WITH KEYBOARD, JOYSTICK OR MOUSE.

PRETTY AS A PICTURE

Computer artist Karl Torok has found stunning graphics are possible if you turn the technology to your advantage

Brian Larkman

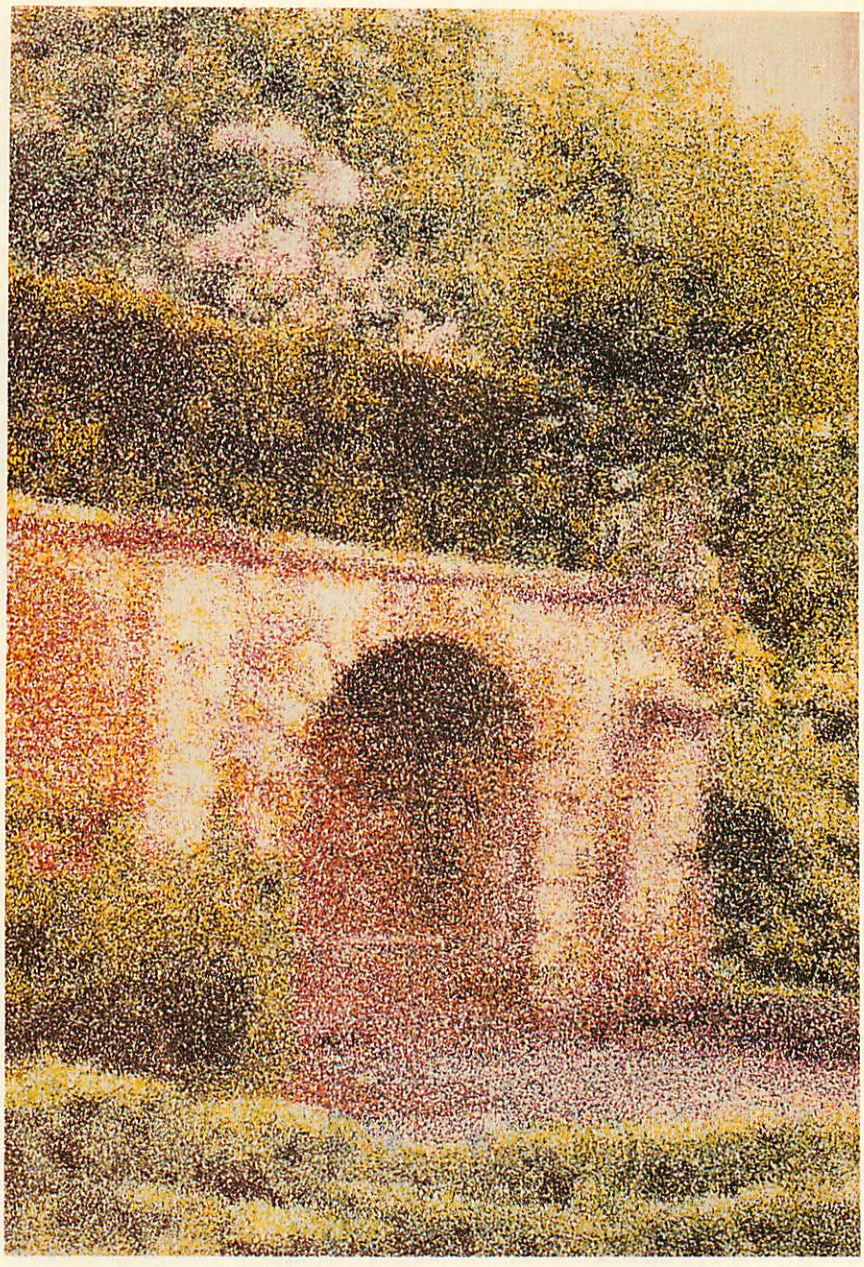

We all know what computer art is – we see it every time we watch the television. Yet the computer art that we have come to take for granted is only one aspect of a subject that is as old as computers themselves.

Computer art is separate from computer graphics in the same way that fine art painting is separate from graphic design or illustration; both disciplines use many of the same techniques but 'art' somehow carries the impression of loftier ideals and less interest in the commercial market. As in other areas of life, absolutely any aspect of computing is fair game for artisitic interpretation, but computer art broadly falls into the two main directions - high tech versions of traditional imagemaking and art generated by a program written by the artist.

Painting With Light, a recent series of television programmes, illustrated the high tech approach, providing six established artists with Quantel Paintbox systems for a day. The results showed how a very powerful computer system used in an artistic context could produce conventional results almost indistinguishable from traditional, 'hand-crafted' art-works. In fact the series was rather disappointing as the artists involved seemed to be reluctant to experiment with the remarkable facilities that Quantel provides. Much more interesting is the work of artists like Mike Marshall, Margot Lovejoy, Alyce Kaprow and others working at MIT and other American institutes with access to powerful paintbox systems. Their work is impossible using conventional techniques.

At the other financial extreme is the work of artists like Karl Torok who use

ILLUSTRATIONS BY KARL TOROK

cheap home micros like the BBC, Atari ST or Amiga with relatively simple 'paintbox' packages like *Artist* (on the BBC), or *Deluxe Paint* (on the Amiga) – simple compared to the Quantel. These can produce many of the effects of the expensive systems but suffer from the limited range of output available. One of the main criticisms of this type of artwork, whether on cheap or expensive systems, is that the software and hardware constrains the artist to some extent, dictating the style of the end product. However the limitations of the micro can be turned to benefit with a little thought.

Take a look at the pictures by Karl Torok on these pages. Until a couple of years ago he was producing drawings and paintings very similar to these by hand. Working from old photographs and postcards, the picture was built up on the canvas with thousands of dots or dabs of a small range of colours – an incredibly laborious technique known in artistic terms as pointillism. Viewed from a normal distance, the dots merge and blend to create the whole range of hues, similar to the way a complete TV picture is built from only red, green and blue dots. Painting a single pointillist picture by hand could take weeks or even months.

Inspired by a computer linked to a digitiser glimpsed in a shop window, Torok set up his own computer assistant – a BBC micro, an R H Electronics digitiser, and a dot-matrix printer. This seemed a reasonable start.

After all, a computer screen is also made up of many dots or pixels, and because there are only eight colours, you are often forced to use mixes or 'dithered' colours to produce a reasonable range of hues. A dot-matrix printer provides a sort of mechanical pointillism. But after using one for some time its artistic limitations became increasingly apparent to Karl.

A range of techniques are available for the computer artist to produce screen images. These include simple paintbox systems (like those described by Paul Bayley in this issue), more complex painting hardware, such as that by Quantel, digitising or frame-grabbing and programmed imagery. This can be carefully designed, as with TV station identification trailers for example, or art generated by the computer with random elements, a style used by the Micro-Arts group. All of these systems are fine if the screen display is the final destination for the image – some artists even value its temporary nature. But for most people, the computer is just a means of developing and manipulating an image. The

final product has to be on video, film or most likely paper – and it is here that the real problems begin.

Video is in some ways the ideal medium to record computer art: it is cheap, widely available and easy to show now that so many people have access to VCRs. It allows still or moving images, in colour. However, the image quality is usually poor and editing is very difficult without expensive equipment. Many home micros do not allow for video recording, though it is possible with the BBC micros.

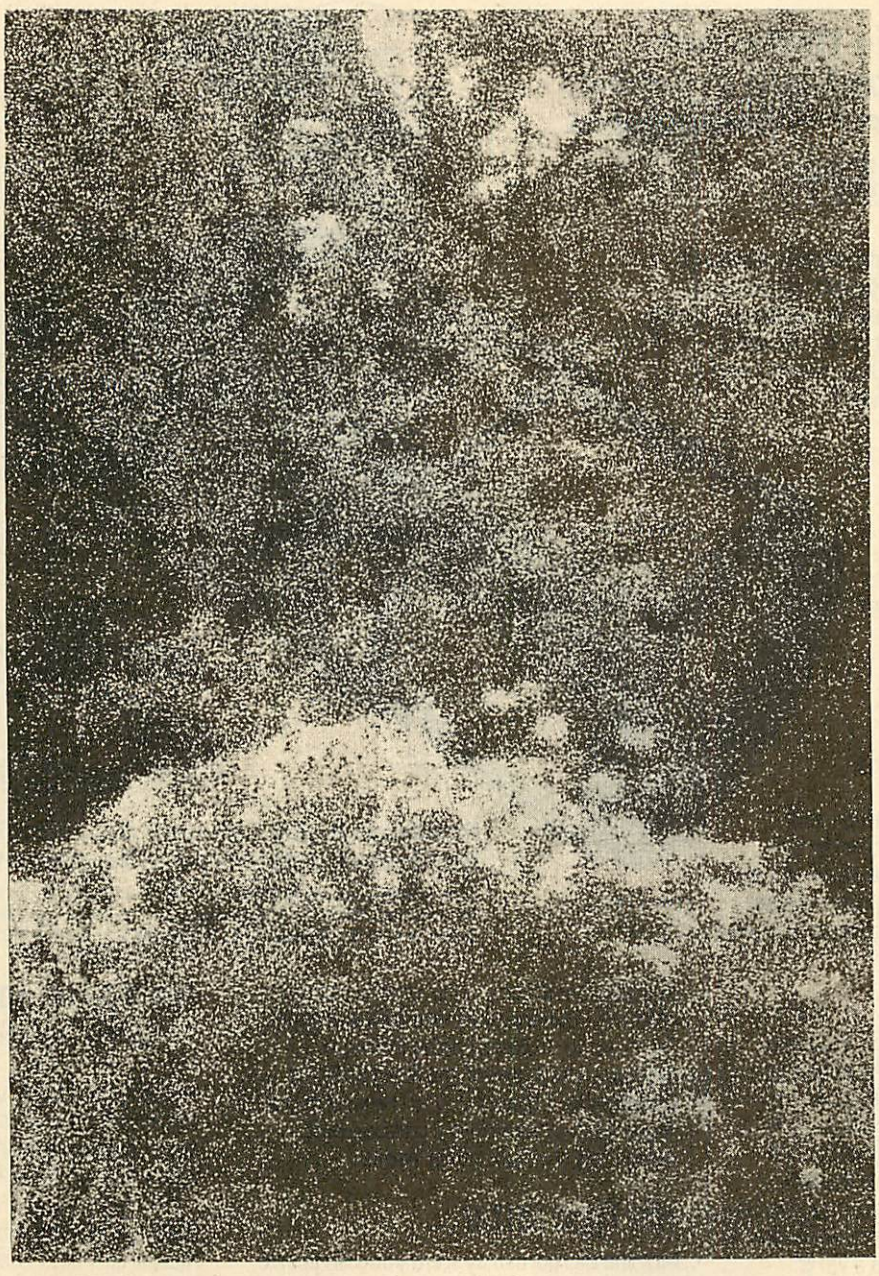

Film is usually too expensive to use as a storage medium. It is possible to take both moving and still photographs direct from the monitor screen, but problems with scan-lines, and especially with distortion due to the curve of the monitor glass, make film images very unsatisfactory. Systems do exist to photograph screens directly, the Polaroid Palette for example, or by a direct output to a higher quality transparency-maker, but these are extremely expensive.

The only realistically cheap method is onto paper, using a dot-matrix, ink-jet, or laser printer – or a plotter. As Torok found, even the versatility of a dot-matrix printer does not always produce an artistically acceptable image. This type of printer builds up its image with a series of dots on a matrix or grid. Any image printed by this method naturally takes on an orderly, mechanical appearance. It can be softened by overprinting several times but can never be entirely overcome. Another severe limitation of dot-matrix and thermal printers is the usually very evident horizontal bands of overprinting that they produce as a by-product of the way the printhead moves backward and forward across the paper. This can be overcome to some extent with an ink-jet printer, but the regular pattern of the dots is still evident.

A laser printer is the 'ultimate' output device, as it has very high resolution and also overcomes the horizontal striped look. But other problems become apparent, particularly cost, which often puts it out of reach. In any case, a laser printer can only print whatever graphic image is on the screen dot for dot. The high resolution of the printer is wasted as the image is still limited by the resolution of the screen.

The only other common form of computer-generated hard copy is drawn by a plotter. At first sight this seems the least likely way to produce an artistic image. Nevertheless, this is what Karl Torok uses.

John Downie wrote the software that Torok now uses. His first contact with Karl Torok, an established artist and printmaker, was about some computer aided

design software that Downie had been writing – but it was clear at once that it was unsuitable for Torok's purposes. He wanted plotter driving software to dump computer screen images. Downie explained that a dot-matrix printer rather than a plotter was normally used to do this, but Torok understood the difference and he wanted to drive a plotter.

Downie realised a plotter could do the job, drawing a dot of the appropriate colour for each screen pixel and moving the plotter accordingly. Such an approach would be possible, but surely out of the question since it would take hours to dump a single screen. The lines and areas of a screen drawing can't be drawn by the plotter, unless the picture was drawn with a computer painting package. Karl, however, was delighted at the prospect of such relatively rapid work, since his pointillist technique normally required months of painstaking dotting with drawing pens.

A simple program was quickly written for an A4 plotter and a version of this is on the yellow pages. To avoid the uniformity and unwanted structure that appears while working from the screen, an early addition to the basic program was to use small random but controllable variations in the position of the pen. Control over the density of the plotting was also provided. These early programs were used to produce a series of pictures that rapidly showed the power of such an approach.

Karl began to produce some quite stunning pictures from the software. He uses digitised video images from photographic transparencies and builds up the required scene by combining several versions of the same photograph, using different graphic modes, and sometimes different optical filters on the video camera. The programs combine colours and allow small areas of the image to be developed and edited.

The program allows control over the shape that the pen draws at each point. Squares, loops, hatch lines, triangles and waves were experimented with, with random position, size and orientation introduced. Mathematical distortions of the original screens were easy, algorithms were developed which made a good attempt at causing the pen to follow lines smoothly.

Karl, however, has explored very few of these novelties, concentrating his efforts into developing themes based on the original methods. He has gained a superb control over the use of the software, and by slecting densities, randomness, inks, pigments, pens, and paper textures his pictures have grown from simple screen dumps to fine works of art.

Could you produce this advertisement on your Micro?

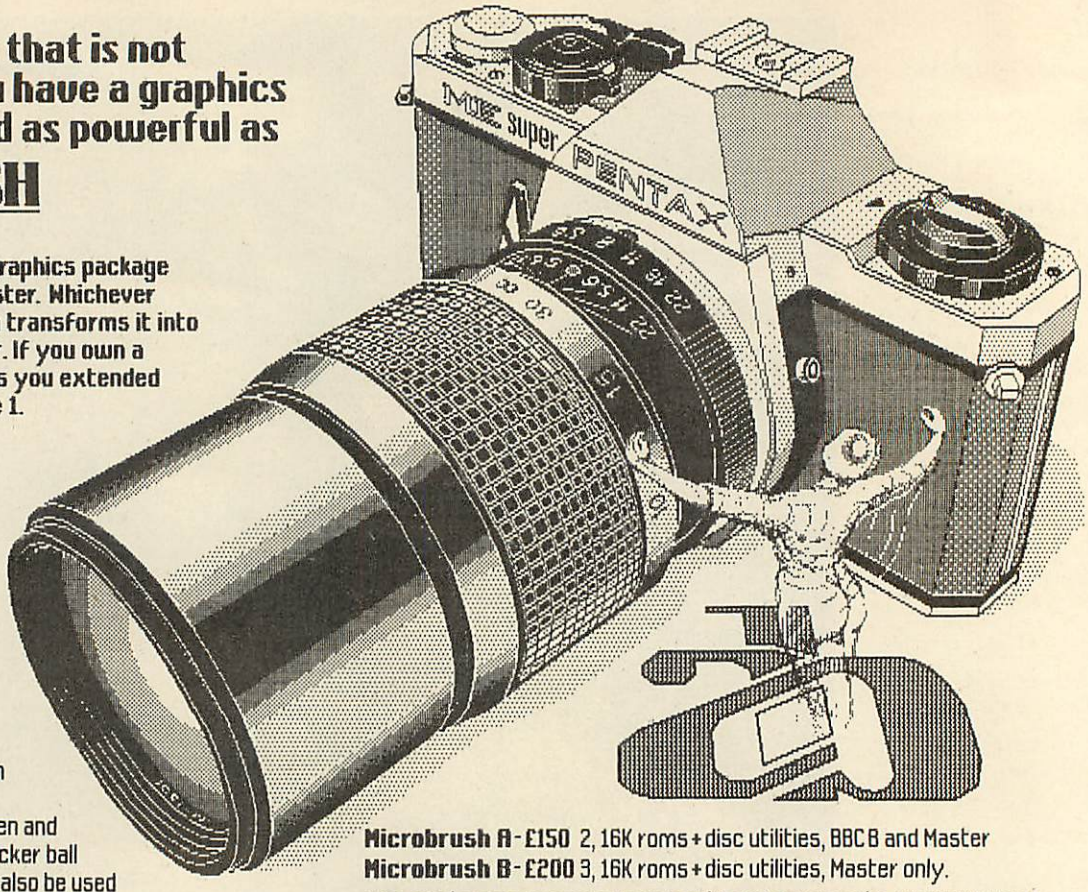

There is very little that is not possible when you have a graphics system as fast and as powerful as

MICROBRUSH

Microbrush is a professional graphics package for either the BBC B or the Master. Whichever machine you have, Microbrush transforms it into a powerful graphics computer. If you own a Master then Microbrush offers you extended resolution in mode 0 and mode 1.

Mode 0 - 1216*416
Mode 1 - 608*416

This whole A4 page was composed as one mode 0 high resolution image using the out-board scroll system, and has a resolution of 1216 * 900 pixels.

Microbrush for the BBC B is comprised of two 16K roms. The Master version contains a third rom. The first two roms can be used in either machine.

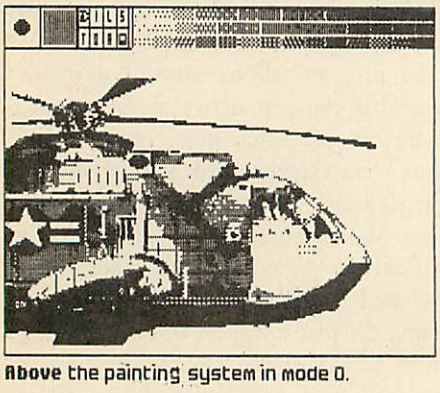

The whole system is menu driven and controlled by the Marconi RB2 tracker ball for speed and precision, but may also be used with either the AMX or the Whigmore mouse. Please note that the tracker ball is not included.

Microbrush A - £150 2, 16K roms + disc utilities, BBC B and Master
Microbrush B - £200 3, 16K roms + disc utilities, Master only.

When ordering please remember to state which system you require, whether you need 40 or 80 track discs and a telephone no. if you have one. Orders and information requests should be sent to-AB Designs, 81 Sutton Common Road, Sutton, Surrey. Phone 01 644 6643

The Painting system

This is just 1 of 33 major graphic systems contained within Microbrush and offers you 42 colours in mode 1 and 42 grey tones in mode 0. New colour palettes can be created with which you can draw lines, sketch, fill, paint in foreground, background, opaque, transparent and combined colour. Add this to a colour rubber which will selectively erase any actual colour and you have a very powerful painting system with more than **1,000,000** possible colours.

Above the painting system in mode 0.

The Ikon Generator

The ikon generator is the main workhorse of the Microbrush system as it is used for both generating and positioning any ikon up to 6*3 character blocks. This system is also used by the typesetter and for creating colour palettes, rubbers, paint-brushes and type-faces. Up to 46 ikons can be stored in memory. The scope of the ikon facility is immense as it allows you to transform the Microbrush system into a purpose built design tool that suits your needs.

The Type Setter

With the Microbrush system you will receive 50 proportionally spaced typefaces. The smallest allows you up to 170 characters to the line and if this is not enough then you can design your own typefaces.

The typesetter displays the current font as a scrollable menu allowing you to quickly produce professional typography.

The Screen Editor and the Special Effects Generator

The screen editor is a powerful drag system that allows you to store up to a quarter of the screen in memory. Once stored, images can literally be dragged across the screen, repeated, copied, saved to disc or fed to the special effects generator.

The Special Effects Generator

This is a very versatile system which will automatically outline, inline, shadow, 3^D, half-tone, etc. any image held within the screen editor's memory.

The Injector rom

The Injector rom is the second rom in the Microbrush system. This rom contains the drawing functions such as lines, rectangles, circles, ellipses, arcs, rotate, squash, stretch, zoom, halve and quarter screens, plus a whole host of other functions.

This is a very brief description of just 7 of the 33 graphics systems contained within Microbrush. All of the systems are both fast and easy to access. Microbrush also includes a 7*7 character pixel editor and an Epson FX80 screen dump.

The Master rom

The Master rom takes you into a completely different world of graphics with almost 4 times the resolution in modes 1 and 0, plus 2 on-board graphics screens, 10 rom based typefaces and a 3^D generator which is linked to a 10 point perspective system. This allows you to deal with exceptionally complex perspective tasks such as the camera seen above. Also available for the Master rom is an out-board scroll system which allows you to build images with a resolution greater than 1216*2000, plus there are high res. screen dumps for both Epson and Integrex printers.

Lastly flick through the pages of this magazine and see how many of the other graphic systems are capable of producing their own advertising.

Extentions to the Microbrush system include - The out-board scroll system - £40, an extended Master rom offering you 14 colours in mode 1 and 4 colours in mode 0 - £85, a typeface editor plus fifteen extra typefaces - £25, the Master rom - £65. No VAT if purchased before September 1.

NEW

P.M.S.

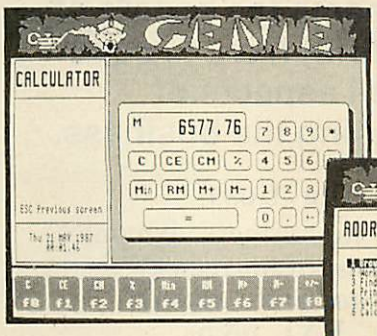

PROUDLY ANNOUNCE

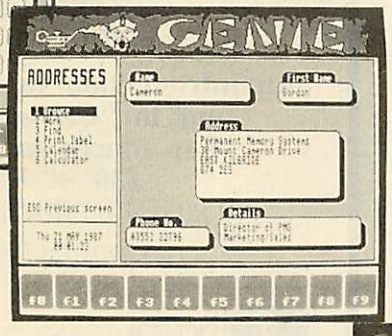

GENIE Junior

ONLY £25 INC VAT

NOW AVAILABLE— A DISK BASED VERSION OF THE HIGHLY ACCLAIMED GENIE "POP-UP" SOFTWARE.

requires no special hardware—Just 1 ROM + 1 Disk

A simple key press (CTRL-Shift-G) halts the current task—requests you insert the GENIE Disk and GENIE Junior responds, "Your Wish is My Command". When finished—a single key stroke drops you back to exactly where you left off.

GENIE Junior "Pops-up" from within Basic, Wordwise, the Inter Series, the View Family, Ultracalc and virtually all serious software.

GENIE Junior has exactly the same, highly praised, desktop utilities as its battery backed big brother—notepad, address book, diary, calendar and calculator—but Junior stores all its data on disk, not battery backed RAM.

WHAT THE PRESS SAYS ABOUT GENIE

"MICRO USER" Oct 87 . . . *stunningly simple to use . . . neat, well packaged, well written . . .*

"ACORN USER" Aug 87 . . . *Genie is a superb package . . . I couldn't be without it . . .*

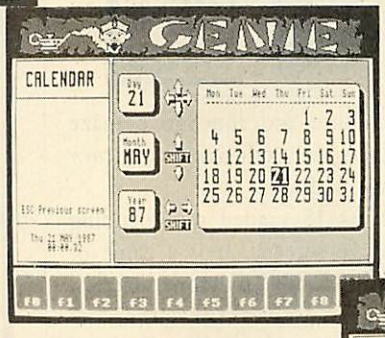

"Pop. Comp. Wkly" June 87 . . . *rapidly becomes an integral part of your system . . . well designed . . .*

"A&B Computing" June 87 . . . *extreme friendliness of design . . . eminently practical piece of software . . .*

"Your Computer" July 87 . . . *a product which can stand alongside its 16 bit role model . . . one piece of software I have always wanted . . .*

"BEEBUG" Aug 87 . . . *extremely versatile . . . a most useful piece of firmware . . .*

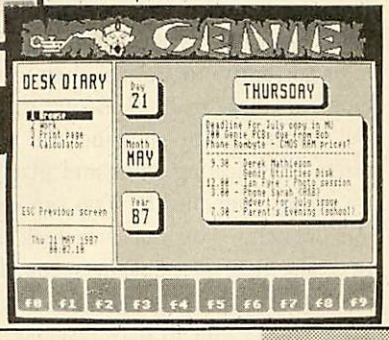

Clearly the reviewers wanted Genie—now you can afford to have one!

GENIE Junior is available for all BBC Micros — B, B+, Master 128, Compact.

Disk formats supported—3.5", 5.25", DFS, ADFS (Ramdisk/Winchester/Network versions will be available—Contact Sales Office before ordering).

Compatible with sideways RAM, Shadow RAM, 65C02/512/Z80 second processors.

NEW

MASTER CARTRIDGE GENIE

For all you MASTER users who are short of ROM sockets— here is a version of GENIE which simply plugs into one of the cartridge slots. All the features of the original, battery backed GENIE in a cartridge with a high quality gold edge connector.

ADDITIONAL SIDEWAYS RAM. Since each cartridge slot is effectively 2 ROMS sockets, and GENIE only occupies one of them, PMS can fit an optional 16K of sideways RAM inside the GENIE cartridge. This can be used in exactly the same way as the MASTER's internal sideways RAM. The additional sideways RAM costs £15, and must be specified when ordering GENIE.

STOP PRESS **GENIE IS NOW COMPATIBLE WITH THE 512 CO-PROCESSOR!! POP'S UP FROM WITHIN GEM ETC. GENIE WATCH—A REAL TIME CLOCK FOR THE BBC 'B'.** **STOP PRESS**

XOR

AU OFFER

Xor plus Xor Designer only £15

We are offering Logotrons's unique and innovative maze game *Xor* together with *Xor Designer* exclusively to *Acorn User* readers at the amazing price of £15.

The original *Xor* game contains 15 graded mindbending mazes, each consisting of about 16 screens. It is a game of intriguing logical problems with interactive dynamic puzzles.

Xor Designer, as the name suggests, gives *Xor* enthusiasts an opportunity to design their own mazes. *Xor Designer* comprises three main elements: the Maze Designer provides you with a screen showing the whole maze, and an easy system for selecting icons and placing them on the screen as you create your puzzle. You can edit existing mazes or start from scratch – you can even lock mazes to deter inquisitive eyes! The Icon Designer lets you design your own icons to use with any maze or edit the existing icon set. The Game Player allows you to play just like the original *Xor*.

Please send me _____ copies of *Xor* and *Xor Designer* at only £15.

I enclose my cheque/postal order for £_____ made payable to Logotron Ltd

DRAWING THE CROWDS

How do you produce graphics good enough to sell? A professional computer artist gives away some trade secrets

Jonathan Inglis

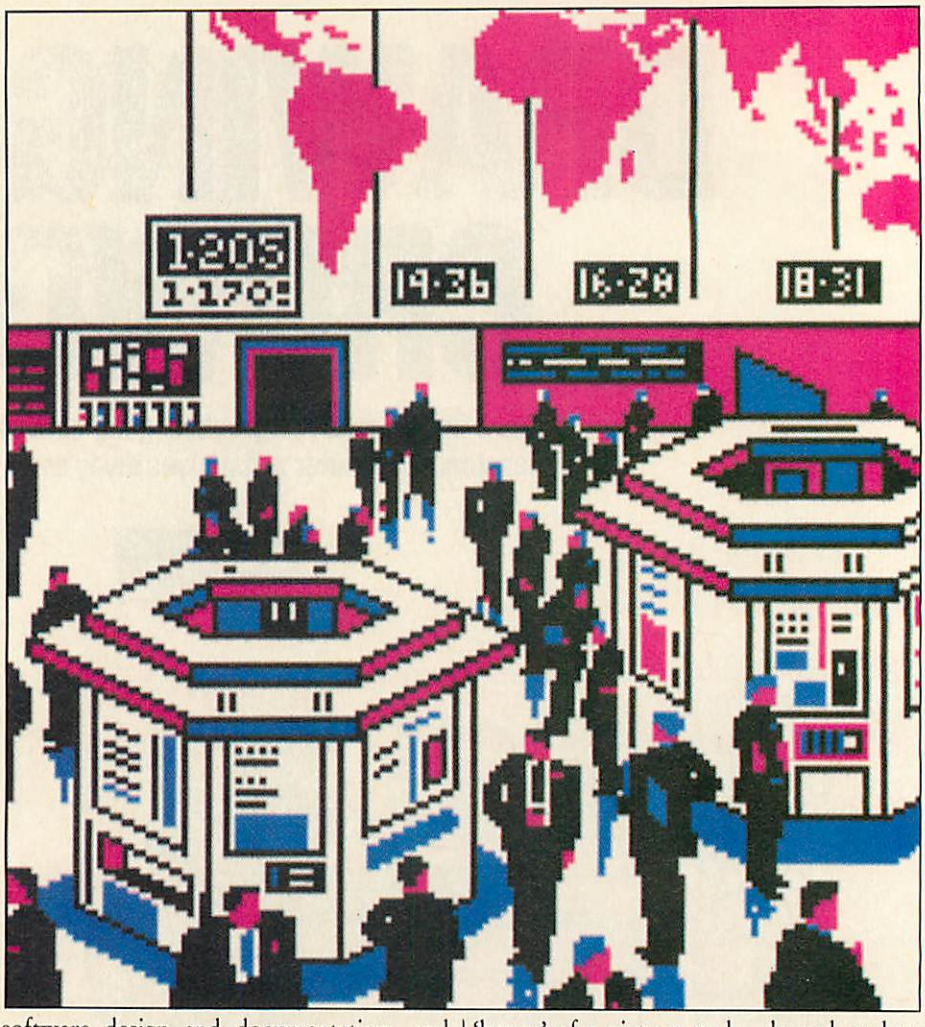

ILLUSTRATIONS BY JONATHAN INGLIS

As a former art teacher, my background is in painting rather than computing. I became fascinated by the artistic possibilities of the computer, and soon became convinced that it could be used as a legitimate artistic medium. The more people who said it couldn't be done, the more determined I became. Since leaving teaching, and becoming a full-time freelance illustrator, my work has appeared in a number of magazines – the *Sunday Times* and *Observer* colour magazines, *Radio Times* and of course on the cover of *Acorn User*. This work, plus commercial advertising and promotional material, has until recently all been done on a BBC micro.

Despite the advances of the past few years, many people in the art and design field are still surprisingly unwilling to accept computers and computer graphics. New technology in the print and broadcast media is creating a demand for new skills and jobs, for which there is a shortage of

The Stock Market scene (right) shows how a bold use of unrealistic colour can produce a striking effect. 'Still Life' (far right) illustrates drawing with simple geometric shapes – straight lines and ellipses. Notice how white lines on a dark background give the glass a transparent appearance, while the white highlights on the apple give the impression of three-dimensionality

suitable applicants in many cases. Education authorities and the Government should recognise the importance of computers in art and design, and act accordingly.

Five years ago, it was far from easy to convince others that the BBC micro could be used creatively. Early art packages were designed around the limitations of the model A and took ages to load from cassette. You could draw low resolution circles, triangles and diagonal lines, but the instructions were often confusing or misleading. Make a mistake and you probably had to clear the screen and start again. Most people retreated to the safety of pencil and crayon. It was a bad start from which the industry is still recovering.

For the persistent there were soon rewards, in particular the Grafpad and Computer Concepts' *Graphics* ROM. Programs began to appear in magazines making it possible to begin compiling a collection of useful graphics utilities. The original AMX *Art* did much to promote user-friendly graphics on the BBC micro, and it is still an excellent package for the beginner. The AMX utilities included the earliest pixel editor that I used. The release of *Super Art* and *Pagemaker* (now *Stop Press*) in the same year established a good standard of graphics software design and documentation, and this has been consolidated since. The release of Watford's excellent *Quest Paint* package, seemingly the most comprehensive drawing package yet, has enlivened what has been a somewhat quiet patch recently.

The studio

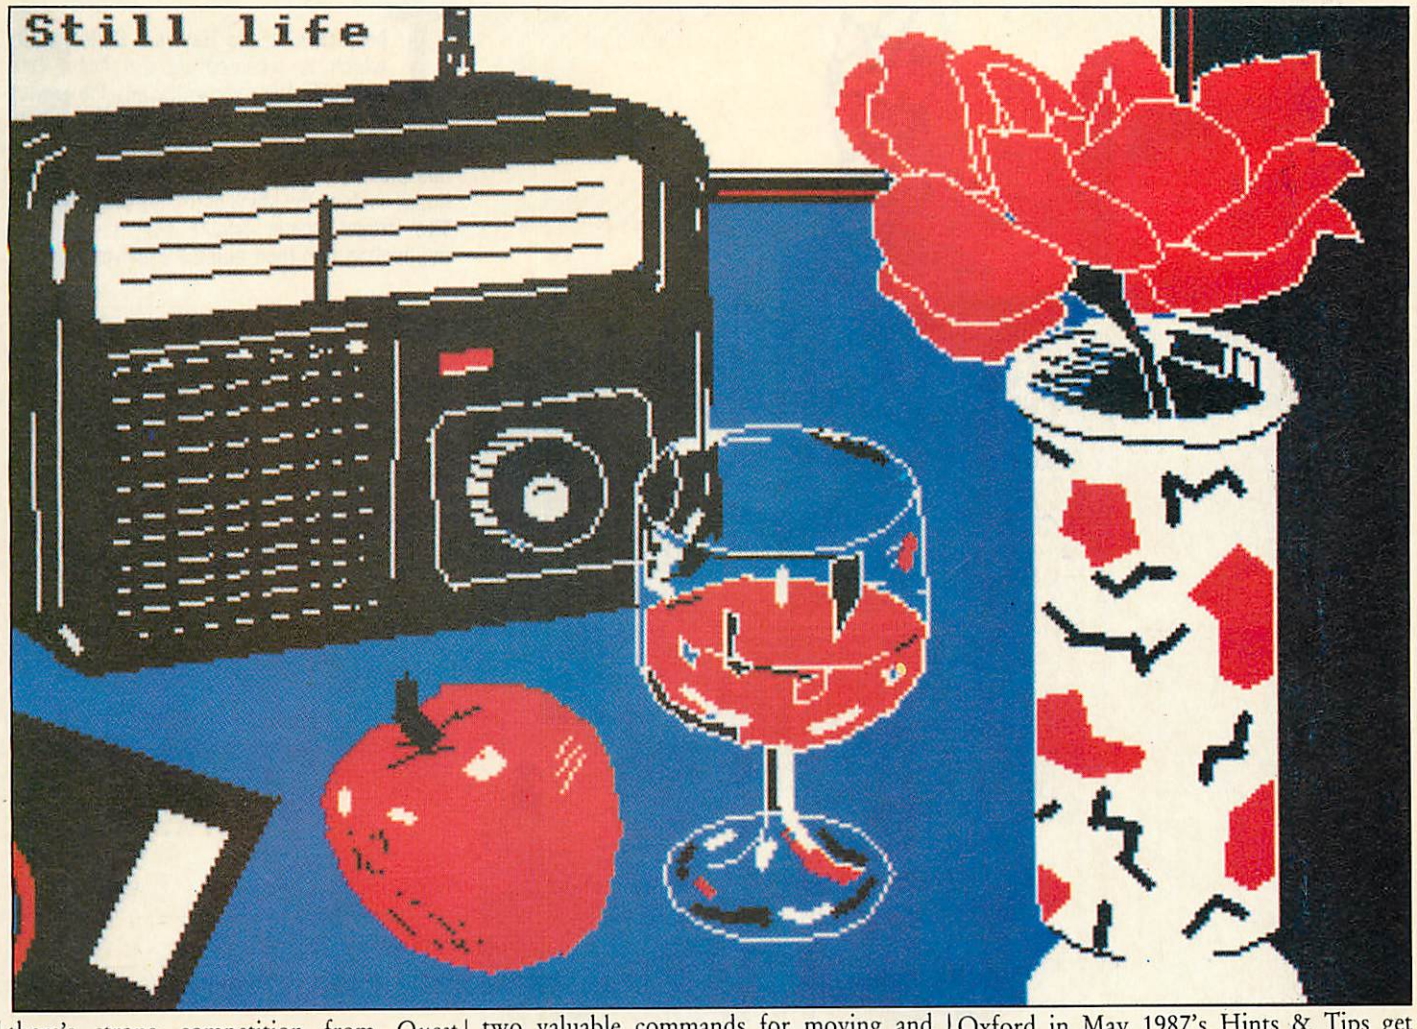

My 'studio' consists of a standard BBC micro with a Sidewise ROM board, Microvitec colour monitor, disc drives and mice, a Grafpad, Watford digitiser and an Epson RX-80 printer.

For simple outline work, it is sometimes easiest to use keyboard-based programs such as Rob Fenton's *Paintbox* which allows for accurate positioning. I don't like joysticks or light pens as they are less precise. Using a mouse is the most natural way to draw; it's even preferable to using a graphics tablet. The Nidd Valley mouse was recently reviewed in *Acorn User* and criticised for its slightly 'heavy' response, but it is this that makes it ideal for drawing freehand. It helps to have a slightly slower cursor movement.

A digitiser is well worth having too, if you can afford it. It's fascinating just to watch the night's television slowly unrolling on your monitor, and grabbing the 'bones' of a picture, to be cleaned up later with normal art software. The Plotmate Scanner is a device which fits on a plotter and scans black and white artwork, storing the resulting image as a standard screen. It requires a certain amount of practice, as not all pictures will give good results, and it's expensive, but schools with a plotter of their own might like to investigate.

As far as software goes I don't use one package to the exclusion of all others. It is best to build up a library of programs and routines. It is often necessary to mix techniques just as a conventional artist does. Use particular packages where you feel they suit the needs of the picture. For some pictures it helps to be able to see the entire screen – in this case, use *Freehand* or *Quest Paint*. *Quest Paint* and also the *Grafpad 2 Plus* software allow you to draw both straight and freehand lines of variable thickness, a useful feature I have not seen on other programs. Where an image needs to be enlarged, compressed, or squashed *Freehand* is probably best. For freer work, *Super Art* and *Quest Paint* are more suitable; their 'spray-can' option offers a range of effects similar to a soft crayon.

Until recently, *Super Art* was a 'standard', because of its pixel editor. Now

there's strong competition from *Quest Paint*. It incorporates many features not available in *Super Art*, such as the ability to 'protect' certain colours when drawing or erasing, and full screen working at all times. Many aspects of *Quest Paint* are easier to use than *Super Art*, in particular the loading and saving of screens.

Excellent though all these packages are, there's no denying one fact. The best way to draw pictures can often be to program them in. Many pictures begin life as a short program. I save the resulting image as a screen, and then load it into whichever package I'm going to use. Drawing shapes with Basic involves a core of no more than 20 or so commands, so it's not too difficult. It may seem paradoxical for an artist to advocate programming, but the first rule of computer graphics is to understand the technology and exploit its capabilities. If you don't, then you're wasting much of the machine's own special character.

What programming techniques do I recommend? Apart from the BBC micro's own Basic, the Computer Concepts *Graphics* ROM is an essential aid, particularly the CIRCLE, ARC, ROTATE and SCALE commands. Acorn's *GXR* ROM is a possible alternative, and it boasts one or two valuable commands for moving and copying areas of the screen.

I use a library of utility programs culled from various sources.

For some tasks, such as enlarging areas of the screen, rotating large areas and reducing screens to one-quarter size, I've written my own routines. The best advice is to keep a look out for useful hints and tips and keep them all together on a disc.

Transferring screen images onto paper can be a problem. Black and white illustrations are generally straightforward – one of the many screen dump programs is suitable for most purposes. If you're hoping to see your work in print, remember that newspapers and magazines may not always print pictures as clearly as you would like. Shaded areas can look particularly muddy, and thin lines sometimes disappear. Make your designs as bold as possible, and don't complicate them with too many tones. Using better quality paper and a new ribbon can help too.

One possible area of difficulty concerns the accurate reproduction of angles and circles. A circle on screen may not print perfectly round, and this can be awkward with technical designs. 'Proportional' screen dumps such as that by M A Jeffree of Oxford in May 1987's Hints & Tips get around this problem.

Colour output is more difficult: Dimension Graphics is the only company that I know of which produces colour prints to an acceptable quality for top class colour reproduction. Dimension Graphics prints BBC micro screens from disc, as well as Spectrum, Commodore, Amstrad CPC and IBM colour or enhanced graphics screens. The colour matching on these prints is not perfect, but if you have a masterpiece you want to hang in your living room, contact them. The Integrex colour printer is also capable of good quality screen dumps.

The system

Although I've done most of my work on a BBC micro, I've also used a number of other machines over the past few years. Most recent work has used a Tandon IBM clone, fitted with a hard disc and enhanced graphics adapter (EGA). Of the newer machines, the Amiga is most impressive. This is a computer designed for graphics; However, a computer's graphic capability is not the sole criterion when it comes to choosing a system.

What makes a machine useful is the amount of software and support is can use.

The picture of the Hayward Gallery (left), which is included on the *Acorn User Portfolio* disc, shows clearly the importance of perspective when drawing objects. Carefully choosing your subject is also vital – this picture consists almost entirely of straight lines, as does the stack of money (bottom right). The crowd scene (right) was built up by duplicating and then editing a few faces

This must include a well-documented Basic, plenty of books and magazines, utilities for printer dumps, file conversion and so on. Above all, it helps if you can turn to other people for advice. The BBC micro has all of these in abundance and it is this which has been an important factor in my being, until now, a faithful BBC micro user.

It is difficult to see how the Archimedes fits into the picture. However, its graphic abilities rival the Amiga and the IBM EGA models, and software is being developed by companies such as Clares and AMS.

The blank page

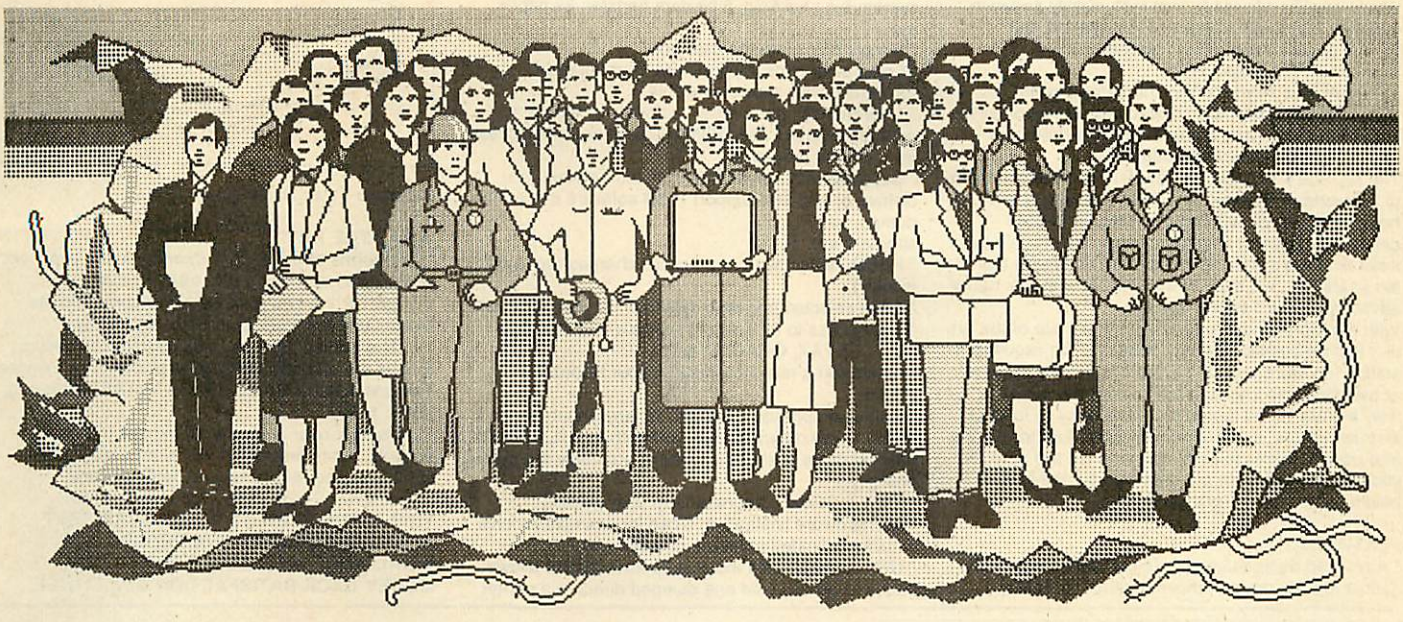

Choosing the right software and hardware is only part of the solution. Having set up your 'studio' you now face the age-old problem – the blank page.

So where do you start? First, a few words of caution. Drawing a picture with a computer can be more time-consuming than drawing by conventional means. Composition and design require careful thought. Second, there's still no substitute for good drawing skills. The computer screen can expose bad drawing remarkably easily. You have only a limited range of effects and these have to be employed very carefully. A computer will not produce brilliant results merely at the touch of a button.

On the positive side there are many suggestions for the budding artist. It's important to recognise what the machine is and isn't capable of. Try to plan your pictures so that they make the most of what you can do easily with your micro – such as repeating shapes. The crowd scene opposite uses only a few basic body elements; the figures are assembled from similar heads and legs. Carefully recolouring and flipping them creates the sense of variety. You don't have to use complex shapes; why not try to create landscapes or figures using two or three simple units, such as a cone, sphere and cube? Designing pictures using a limited range of shapes requires very careful thought, as those who've experimented with *Acorn User*'s *Kiddie Art* (February 1987) will testify.

Take a look at some 'Op Art', which was popular during the Sixties, in particular an artist like Victor Vasarely. Op Art effects are easy to recreate using textured fill patterns, in conjunction with even the simplest of shapes. Some programs such as *Super Plotter* or *Freehand*, allow you to stretch and enlarge shapes too, and remember that these can easily be rotated, mirrored and recoloured.

Some images occur regularly – figures, vehicles, computers and so on. Keep these as a 'cuttings' library. It's possible to build up whole pictures by collaging elements together – this is a very popular technique in advertising and animation. If you have a

digitiser, then you can cut figures and faces from frames grabbed from favourite TV programmes, and provide your own additions – speech bubbles perhaps. Always look for ways in which your computer's features can make life easier.

It is important also to recognise the machine's weaknesses too. The BBC micro's screen doesn't have the resolution or the colour range to reproduce the effect of a colour photograph. With a pencil and a sheet of paper you can create far more subtle shading effects than you can achieve with the most powerful micros. For this reason, don't try to copy photographs or paintings too slavishly. If you're looking for inspiration, look instead at pictures produced using simpler graphic techniques. Old advertising and film posters use a restricted range of colours to achieve dramatic results. Woodcuts and engravings, or other black and white illustrations will teach you a great deal. It's not necessary to draw everything with a black line around it. If you do, it often gives a cartoon-like effect. Certain objects in a picture can be drawn in black, as if in silhouette, with details drawn in white lines. This gives a bolder, more varied look.

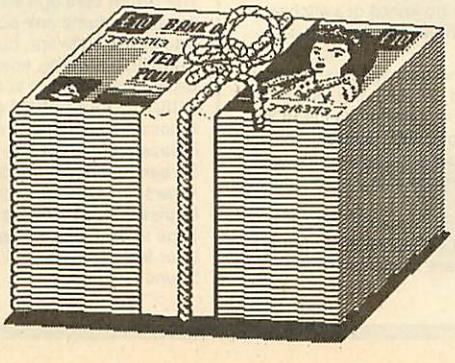

If you feel happier with black lines around everything, take a look at some Japanese prints. These are decorative and bright, and interesting to translate onto the computer screen.

When it comes to drawing, don't be afraid to use straight lines. Freehand drawing with a mouse is difficult, particularly for finer details. Instead, build up a shape using the straight line option in your package, drawing curves for example as a series of short steps. This way you can draw outlines relatively quickly. Straight lines don't always look out of place, and you can always iron out awkward edges with a pixel editor. Your micro screen simply cannot produce smooth curves, and it's not worth pretending that it can.

Embroidered textiles and carpets use techniques very similar to computer graphics. If you're designing sprites or small figures, you could do worse than take a look at Persian carpets, or those 'Home Sweet Home' tapestry and embroidery samplers. You'll be surprised at how good they look transferred to your screen. I've taken ideas from Indian miniatures and the Bayeux Tapestry with interesting results.

Colour is a problem, especially if you're aiming at a more realistic effect. The BBC micro has too limited a range of colours, so forget realism and experiment. Instead, look at your compositions in terms of the balance of colours. If you get this right, then people accept your choice of unrealistic colours. Unexpected colour combinations can produce quite atmospheric, even 'other worldly', effects.

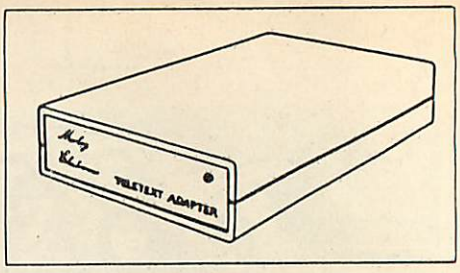

For those determined to go for photographic realism, study screens produced by a video digitiser. A digitiser interprets the shades or tones of a video image as separate areas of colour. To get a feel for the effect, try looking at a coloured image on a monochrome monitor. The digitiser does the reverse – converting greys into colour. To imitate this then you need to consider your picture in terms of tones rather than lines. Now try to analyse a black and white photograph into four main shades; black, dark grey, light grey and white. These can then be translated for example into black, red, yellow and white on screen. Once you've done this, smooth off the hard edges with an airbrush effect mixing the various colours. Alternatively, reduce everything to just black and white for a much more dramatic effect.

Finally a general point. One of the commonest traps to fall into with any drawing, not just on computers, is the temptation to cram in too much detail. Good drawing is nearly always a matter of knowing what to leave out. You don't need to put every detail in: the result can often just look lifeless. When drawing, why not try leaving gaps in your lines, dropping out a pixel here and there? It can open up your pictures and give them a sense of light and liveliness. With faces, avoid the temptation to draw every eyelash, especially when drawing pixel by pixel. Cartoons can teach you a great deal about how to draw pictures. A few lines can often convey a great deal more than a detailed portrait. A squiggle with the odd pixel coloured differently can be effectively used to suggest a figure in a landscape.

In this article I've only been able to suggest a few ideas to explore, but I hope they'll be enough to encourage readers to branch out from the usual space shuttles and racing cars. There are all sorts of styles and subjects just waiting for exploration. Above all be adventurous. Like the sheriff said, 'Draw'.

TELETEXT ADAPTER

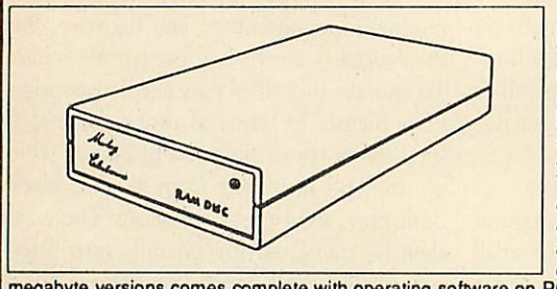

Would you like access to free high quality software and over a thousand pages of information, but Prestel access charges and phone bills too expensive? Then read on!
The answer is Teletext. Yes the same system everyone has seen incorporated into television sets, but with a difference. When Teletext is read by a computer you can actually use the data.
The MORLEY TELETEXT ADAPTER introduces you to the world of Teletext at a price that won't break the bank. Inside it you will find the latest in second generation Teletext chip technology, which unlike our rivals who are still using chips designed more than ten years ago, will be fully compatible with any future advances in the Teletext system.
With the Morley adapter you will get a state of the art unit that automatically tunes itself into the required station (no more messing around with screwdrivers or twiddling little knobs in the back of the case), a user friendly menu driven program, easy to follow instructions and a 12 month warranty. Add to this the free downloadable telesoftware and we are sure that you will agree that we are offering you one of the best bargains on the market today.

FEATURES:
* Advanced design uses the latest technology, will handle ANY future enhancements to the Teletext system e.g.: full field; 8 bit data transfer; 2k pages etc.
* Simply plugs into the user port.
* Low power consumption, less than 200ma. Optional power supply available.
* User friendly menu driven software including extended OSCLI and OSWord commands for access from BASIC programs.
* Supplied with 16k ATS (Advanced Teletext Software) and 16k support ROM software inc. printer dumps, page spoolers etc.
* FREE Telesoftware, no access charges (updated weekly).
* Save selected pages to disc/tape for later retrieval.
* Full access to all Teletext services and channels e.g.: CEEFAX, ORACLE, 4-TEL.
* Gives you a real-time clock at your disposal (*TIME).
* Software upgrades to allow for any enhancements to the Teletext service, e.g.: extra channels, full field data on cable & satellite systems etc. (only the media charge).
* Easy to follow comprehensive user guides.
* No hardware limitations, it can for example receive virtually unlimited numbers of channels.
* Utils disc available including printer drivers allows pages to be selected and dumped direct to a printer (no more TV or Radio Times to buy).

WHAT THE REVIEWERS SAID:
". . .In terms of price, performance, future expansion possibilities and those little touches that show thought for the end user I would recommend the Morley unit."–*(Acorn User, January, 1986).*
". . .The Morley unit has been designed to ensure that its operation is simple and smooth. It is the ideal Teletext adapter for school use."–*(A&B Computing, June, 1986).*
". . .Using it over a number of months in different schools, it has proved utterly reliable, and may confidently be recommended."–*(The Times Educational Supplement, September, 1986).*
THIS IS THE BIGGEST SELLING TELETEXT ADAPTER CURRENTLY IN PRODUCTION WORLDWIDE, AND COMES WITH A FULL MONEY BACK SATISFACTION GUARANTEE.

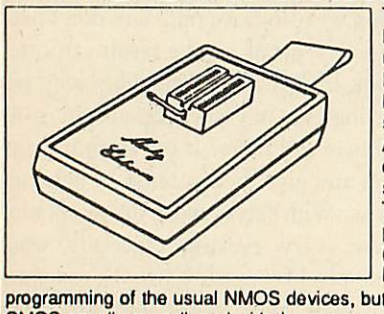

RAMDISC

Now available! The first true MEGA capacity RAMdisc for the BBC, BBC B+ and MASTER computers. This fully compatible unit, currently available in either 1 or 2 megabyte versions comes complete with operating software on ROM, power supply, and a comprehensive user guide.

FEATURES:
One megabyte of RAM connected to the 1mHz bus. Used with the supplied ROM software programs and files may be saved and loaded from the RAMdisc in the same manner as from a floppy disc with a large increase of speed, for example, a 20k mode 0 screen takes about 3-4 seconds to load from disc and about 0.2-0.3 seconds to load from the RAMdisc. The RAMdisc ROM operates as a utility ROM working with the current filing system rather than as a separate filing system. Therefore ensures compatibility with any Acorn compatible DFS (not ADFS). The RAMdisc can be selected by a * command to take the place of any drive number from 0 to 9. If the RAMdisc replaces a floppy drive as 0 for example, all commands addressed to drive 0 will be intercepted by the RAMdisc. The default drive number is 4. Any 'Dangerous' *commands such as *COMPACT, *COPY, *BACKUP etc can be intercepted and the BBC's RAM from page 2 to &7FFF saved to RAMdisc workspace, and may be recovered using a *command. This prevents accidental corruption of any programs/data in RAM you may have been using at the time. The filing system wedge ROM supplied supports load/save, byte file access, all relevant OSFSC commands, and contains a formatter verifier and 'sector' editor for use with the RAMdisc. Catalogue structure allows up to 2,688 files.
Well that's the spec., add to this our usual 12 month no quibble guarantee and we're sure you'll agree the Morley RAMdisc is the sensible alternative if increased storage capacity and speed is your requirement.

EPROM PROGRAMMER V2

The MORLEY EPROM PROGRAMMER V2 is a small self contained unit that plugs into the BBC or MASTER user port. It comes with a high quality ZIF (zero insertion force socket) and contrasting plastic case. Also included in the package is it's own user friendly menu driven software on ROM or disc.
This state of the art unit, allows programming of 2764 (8k), 27128 (16k), and 27256 (32k) EPROMS. Not only does the hardware allow programming of the usual NMOS devices, but will handle the new generation CMOS equally as well, and with the average time taken to program a 16k at less than 30 seconds we believe it to be one of the fastest programmers available today.

THE HARDWARE
The Unit is completely under software control, there are no knobs or switches to baffle the novice, and the extended features provided should excite the pro's.

THE SOFTWARE
The comprehensive user friendly software included in the package has two main parts, the first allows EPROMS to be read, programmed, verified and edited, also allowing a ROM image to be loaded or saved to disc. The second is a full ROM management system in its own right, which has a host of useful features and routines, such as KILL and RESURRECT ROM to disable or enable a sideways ROM, dump ROM image to buffer or disc, move ROM image in buffer to sideways RAM, and VIEW-SEARCH any sideways ROM.
The whole system is available now for less than the price of one WORDWISE chip. So get yourself the all new MORLEY EPROM PROGRAMMER V2 today and start using those expansion boards for what they were made for! ROMS.
Immediate delivery no quibble 12 month guarantee.

MASTER CARTRIDGE

Designed and manufactured by Care Electronics to Acorn specifications.
These high quality Master expansion cartridges will take two 16k sideways ROM's, and will, unlike similar cartridges available from other manufacturers, accept the new second generation programs, such as Computer Concepts Interword and Spellmaster ROM's.
These Cartridges come in a high quality, robust, formed-plastic case, that fits neatly into either one of the Master's cartridge slots.

MASTER SMART CARTRIDGE

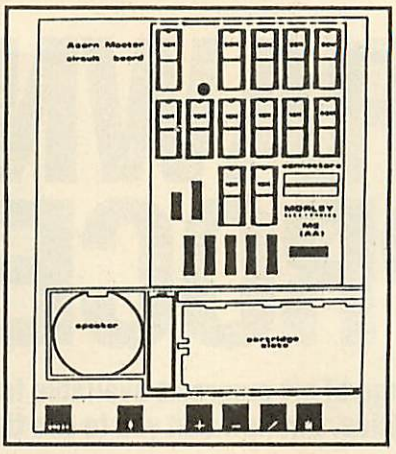

This device was designed and manufactured jointly by Morley and Care Electronics.
The **Smart** cartridge will at the press of a button halt any program running in memory and execute any one of a host of useful built in, or user defined procedures, and once completed will return to the program and continue where it left off. The only limiting factor with this device is the programmers imagination.
The **Smart** cartridge will prive useful to the novice, allowing him to do the simple things like dump any screen to printer, and make backups of protected tape or disc based software, but has an open ended specification for the advanced 'HACKER' allowing advanced programming techniques to be incorporated into almost any program at the touch of a button.

BUILT IN FEATURES (at the press of a button)
Autosaves computer's entire memory.
Freeze program at any point.
Screen dump (any mode) to printer or disc.
Allows any OSCLI command without disturbing memory.
Copies 90% of protected software.
Tape to disc, disc to tape.
User friendly menu.
Sound On/Off.

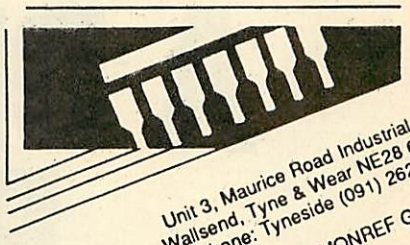

12 MONTH NO QUIBBLE WARRANTY
ALL CARTRIDGES COME WITH A

NEW

MORLEY MASTER BOARD 'AA'

MORLEY ELECTRONICS

Unit 3, Maurice Road Industrial Estate, Wallsend, Tyne & Wear NE28 6BY
Telephone: Tyneside (091) 2627507

Telex: 265871 A/B MONREF G (Quoting Mag 70211)

At long last the add-on all MASTER users have been waiting for, an internal ROM board.

No more need to turn the computer off to insert the cartridge containing the ROM you need to debug the program in memory.

The new **MORLEY MASTER BOARD "AA"** allows you to have up to 8x16k and 4x32k extra Roms installed inside your MASTER and still leaves the cartridge slots free. This in effect allows your MASTER to support as many as 24, 16k ROMs installed permanently, whilst retaining the standard 4 x sideways ram banks and four banks by using cartridges

A staggering 32 ROM images installed and accessible at any time

Included in the package is a utility ROM which has many useful features such as 'FICOPY', a clever file transfer program that transfers files between DFS and ADFS formats or vice versa.

So for less than the price of four external cartridges you get a MASTER BOARD "AA" which with twice the capacity has got to be **THE** ROM expansion for the serious MASTER user.

The unit comes with the usual Morley, full no-quibble twelve months warranty, and our usual after sales service

THE COMPLETE RANGE OF TELETEXT SOFTWARE from M/B SOFTWARE

***NEW . . . DESIGN 7 PLUS** – now 'the best' is even better. Held in high regard by reviewers and hundreds of satisfied owners, DESIGN 7 has been further improved, with revised keystrip & even more features. Design/load/save and MODE 7 screen with ease, up to full CEEFAX/Oracle standard. Will convert ANY MODE 7 screen to a BASIC procedure, for inclusion in your own programs. ROM version includes a file copier, printer dumps useable from BASIC etc. B/MASTER/COMPACT.

TELETEXT EMULATORS/SCREEN DISPLAYS/INFORMATION SYSTEMS – A complete range of teletext programs to cater for all needs, with full teletext adapter interfacing.

***NEW . . . DESFAX** – totally new version – streets ahead of the competition – run your own information/display system. Stores hundreds of screens on dual 80 track drives (96 screens on single-sided 40 track), with access to any screen with a SINGLE KEYPRESS. Lots of special effects – screens can scroll, slide, overwrite etc. Animation, loops, subroutines – send for details – not enough space here to even begin to describe the advanced features!! B/MASTER/COMPACT

***NEW . . . MASTERFAX** – 84 MODE 7 screens in memory at once. 148 screens possible with cartridge RAM. An advanced teletext/carousel program featuring SINGLE KEYPRESS or 3-digit page selection. Runs entirely from memory – no disc accesses after pages are loaded. Superb animation and other effects. MASTER/COMPACT only.

***NEW . . . VU-FAX** – 1000 screens and no disc accesses! Screens stored on MORLEY 1MByte RAM DISC. SINGLE KEYPRESS gives instant access to any screen (or emulate teletext). This is the ultimate MODE 7 screen management system – there is nothing else like it. MODEL B/ MASTER 128.

***ALSO . . . MASTERcopy** – DFS/DFS, DFS/ADFS, ADFS/DFS, ADFS/ADFS file copier. Uses the MASTER 128's memory to the full to permit fast disc copying. 31 DFS files to ADFS disc in less than 2 minutes. Creates directories automatically. You will wonder how you ever managed without this program. Described by reviewers as 'unexcelled'. MASTER 128 and COMPACT's fitted with DFS ROMS.

ORDER FORM

To order simply complete and return by post enclosing your cheque/P.O. made payable to Morley Electronics, or by phone during office hours, quoting your ACCESS or VISA number.

AU12

A DRAWN-OUT PROCESS

There is a huge range of art programs avaliable from expensive packages to free utilities. But how can you to use them effectively?

Paul Bayley

In my days in the travel industry, I recall interminable hours spent meddling with Prestel's teletext graphics. The aim – a snappy holiday advertisement in the window overnight. If there was a queue outside the agency the following day, then it had been a success. This was my first attempt at graphic art on a computer; I liked it and I found an effective response could easily be achieved.

Now, based at home and enjoying new artistic freedom, doing something better on a BBC micro was a challenge.

Motivated by those early creative efforts and armed only with residual drawing talent left over from school, I typed in a program from a magazine that seemed to offer some useful facilities. It resembled the now popular *AMX Super Art* package, but without colour. Some fairly appealing line drawings were made and subtly textured, but there was no facility to edit individual pixels. I was daunted by the prospect of having to reload and 'clean-up' my growing personal gallery later.

Other magazine programs were typed in and experimented with, but I still used a cassette system to store completed images. I found that a large colour monitor was a distinct advantage, as my drawings were becoming more and more detailed. And a disc drive helped store completed work faster and more reliably.

A cheap start

Typing in programs from magazines offers a cheap way to start, and some have quite sophisticated drawing facilities. But they don't compete with the best commercial packages. Intensive use of magazine drawing programs gave me a list of the most desirable features that should form the basis for future work. Speed of input, colour and a full-screen drawing area were my main considerations as I contemplated the move to a commercial package.

Architectural drawings can be effective in black and white

When you are ready to expand your drawing horizons, carefully scrutinise as many magazine reviews as possible. Study the advertisements – you'll generally find a discount somewhere to fit your pocket. If at all possible, get some hands-on experience at a dealers – and take a cue-card of questions. Don't be seduced into buying a paint package that contains features you don't need; go for one that supports most of your listed criteria. Remember though, whatever graphics package you purchase, you will find that there are limitations to every program. One package can't do it all – you have to use the best tool for individual jobs, so you may need to amass a 'toolbox' of programs from a variety of sources.

My toolbox comprises the *The Artist* package, plus a Wigmore mouse and a bank of utility programs accumulated from the pages of *Acorn User*.

The Artist is a 16k language ROM painting system designed for full-screen working in mode 2. The keyboard is used only to enter text or type in filenames – at all other times everything is controlled from the mouse via a system of menus. There are three individual menus; one for saving and loading, the main menu for drawing commands, a special effects menu for brushes, complex patterns and colours, plus the actual drawing page which is uncluttered by icons, menus or prompts.

Some surprising results have been achieved even in the 'lumpy' graphics of mode 2. Working in mode 1 or 0 is not supported by *The Artist*. I had to compromise on this when considering the purchase. Particularly useful is the choice of compressing the final image so it takes up minimum disc space, or leaving it uncom-

ILLUSTRATIONS BY PAUL BAYLEY

pressed for use by other programs. Screen dumps are provided for Epson printers, and eight sizes of picture dump with inverse, reverse and/or upside-down options. Although initially expensive, the outlay has been repayed, and the package has considerably influenced my artistic ambition.

The example colour pictures here were initially created in mode 2 using *The Artist* and then converted to mode 1. The monochrome pictures are in mode 4, and were drawn mostly with simple programs from magazines. They have each evolved out of a process of experimentation with utility programs that have appeared in *Acorn User*.

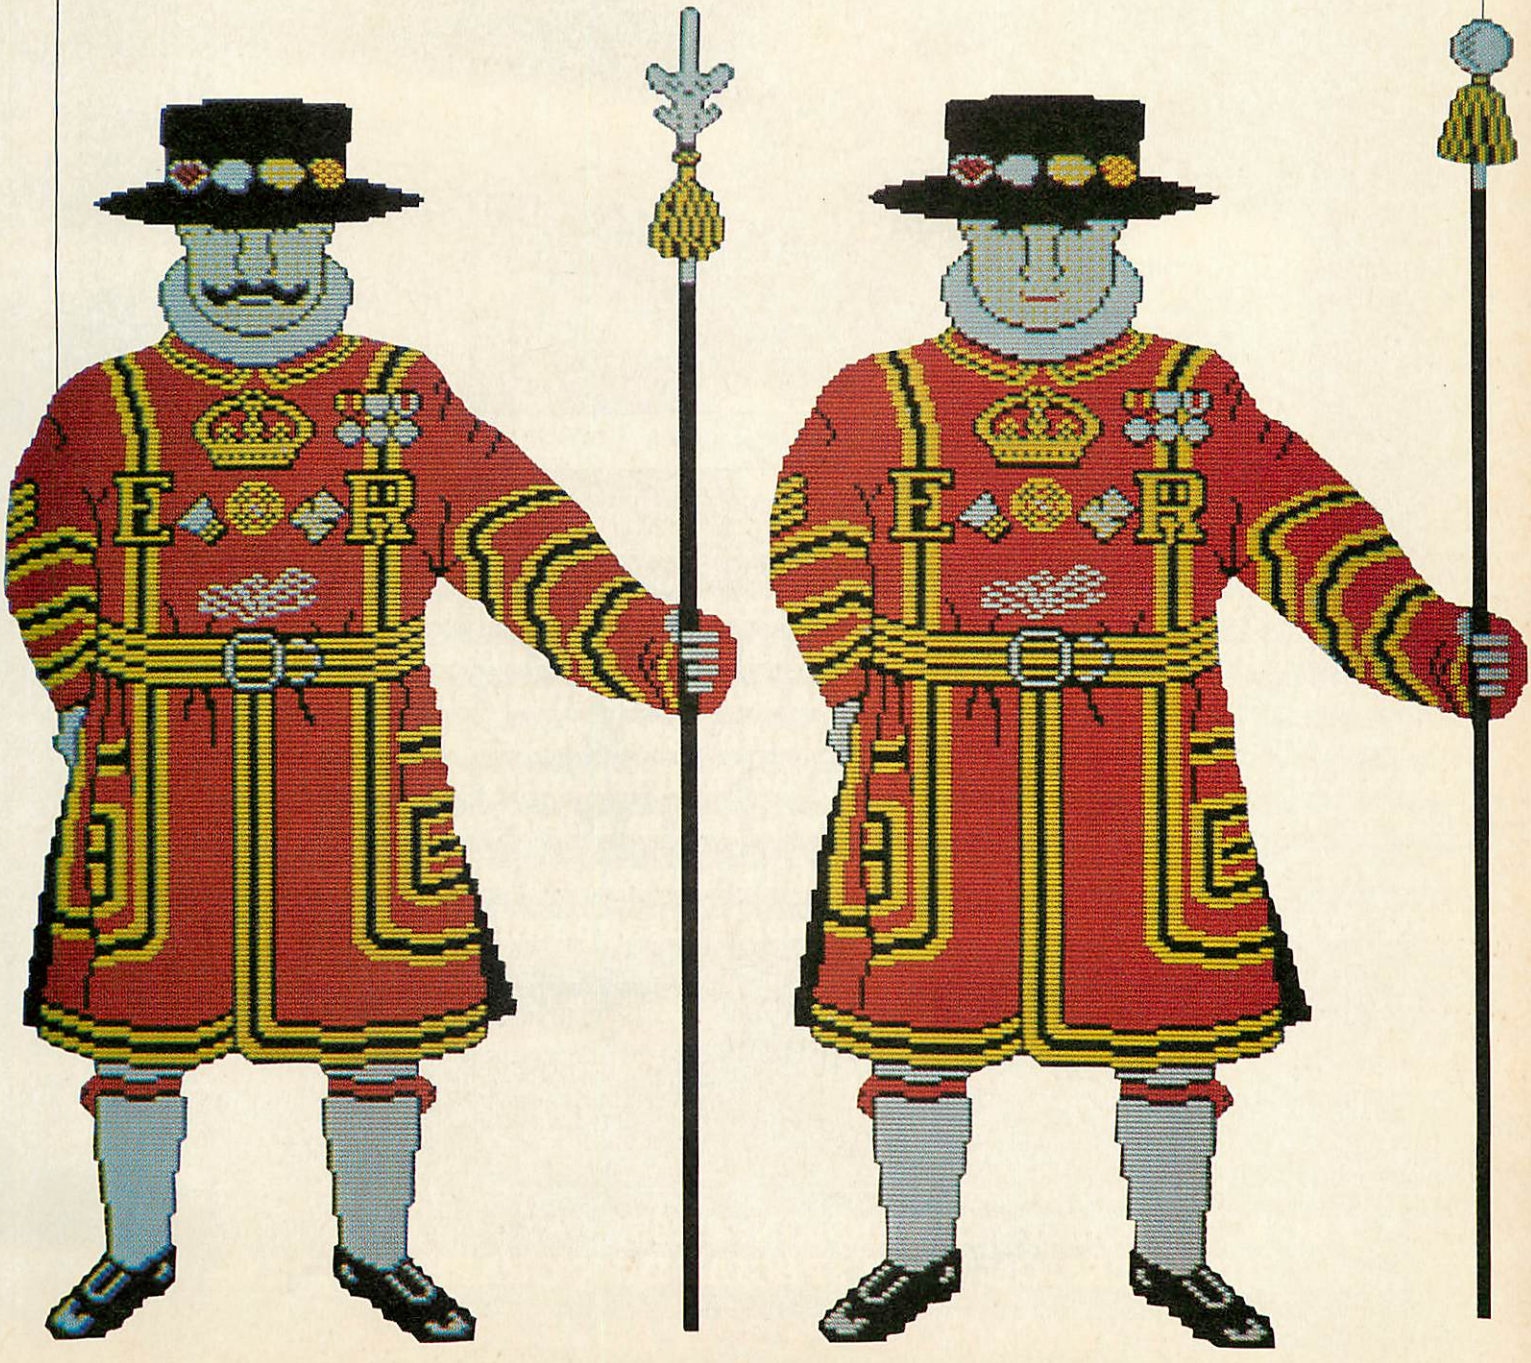

One of the most frequently used utilities has been Phil Wilkes' 'Art to Art Conversion' (*AU*, October 1986). This excellent program converts a mode 2 screen to either mode 0 or 1. Of course as the resolution increases the number of available colours decreases; this is compensated for by representing colours by different shading patterns. An originally cyan area will be converted to orange, a mixture of red and yellow. Green changes to cream and blue to a warm brown. The effects can give an entirely new look to a mode 2 screen.

Saving and loading of whole screens is catered for so that your final picture can be transferred to another art package or stored for for further enhancement. Only changes from a lower to a higher resolution are effected – there's no returning your newly saved mode 0 or 1 screen back to its original mode 2 state – so remember to keep your original.

A pixel editor

The other most frequently used utility is Mike William's pixel editor which was featured in the March 1986 edition of *Acorn User*. If you like your pictures as clean and clear as possible, then this pixel editor is the fine-tuning tool to so the job. The program will operate on a screen image in any of the graphics modes – 0,1,2,4 or 5.

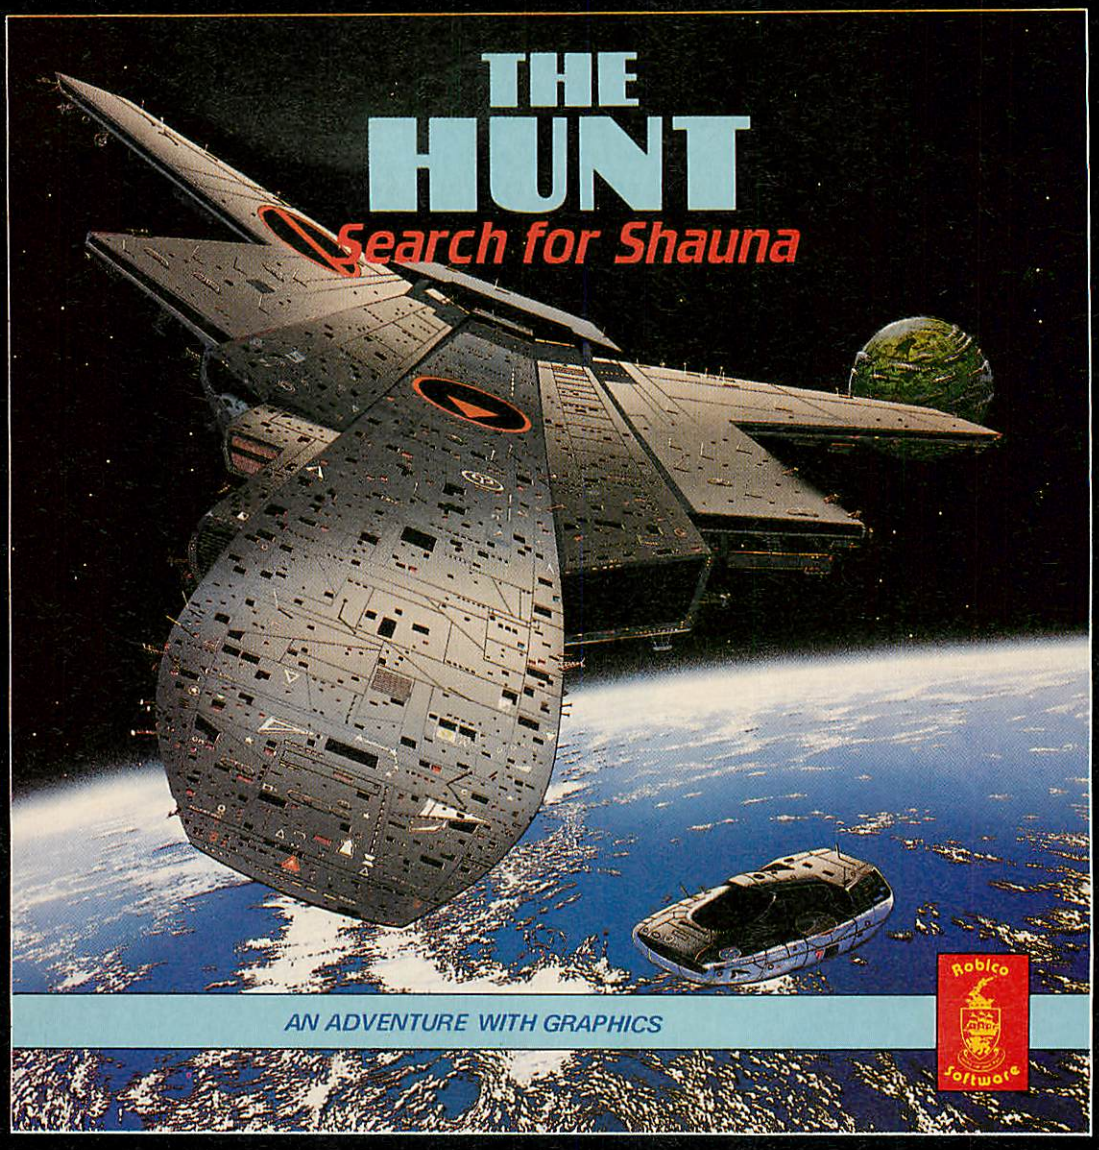

The graphics screen is divided up into a large number of rectangles called pixels – short for picture elements. There are 320 across the screen in mode 1, and 256 down the screen, and each can be a different colour. It is difficult to alter an individual

pixel from within your drawing program unless it has a 'zoom facility' built in. What this pixel editor does is to read a previously saved picture file. A large cursor box can then be moved over the screen to the box area that requires some attention. The area selected is magnified to fill the full screen, so that pixels become large enough to be seen and changed. The alterations to the magnified part are then copied back onto the original screen image. All very efficient and easy to use, but beware. You can so easily become locked into the editor for hours, as you persevere to achieve 'perfect' results. This has happened to me on several occasions. It's largely a case of trial and error but, once satisfied with, say, a particularly expressive face, do make a large enough screen dump for future reference. It will help you next time you come to edit a similar subject.

Flexible art package

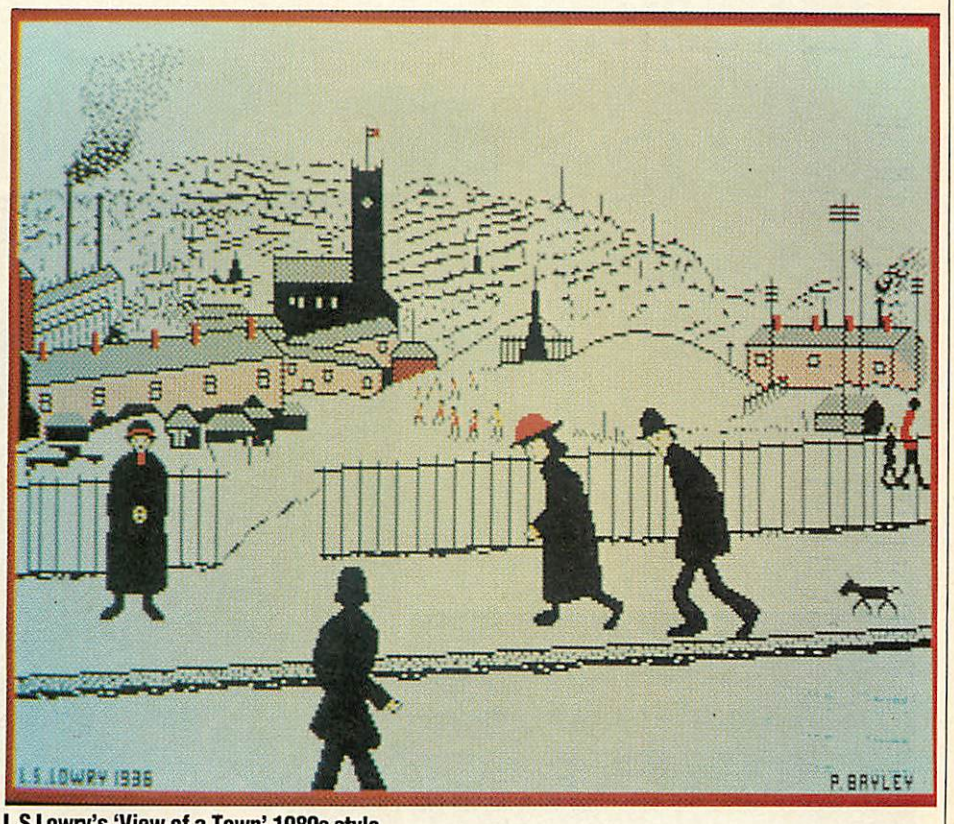

One of the most flexible art package listings to appear in *Acorn User* was Chris Steele's *Freehand*. His initial program in October 1985 was followed in November by some additional utilities. This is the only other art program I use regularly, mainly to try out picture ideas, or to copy parts of pictures and 'import' them into other screens.

When selecting a subject to draw, people often go for familiar doodling subjects; cars, aeroplanes, or buildings. But more imaginative subjects are often more successful. I attempted to rework Lowry's *View of a Town* from a library book. The scene is of a typically stark northern town with very little colour and unusually few bent characters, so it appeared to offer a reasonable chance of success.

The result was a pleasing one but, before it could be published as a graphics bonus in July's *Acorn User* disc, approval had to be granted by the gallery where the original hangs. So beware of the paperwork if you try to emulate original works of art and publish the results.

Tourist postcards and guides are also good subjects, although generally small. I use a magnifying glass to examine the finer details. Another tip for getting a larger subject drawn is to use a clear acetate or plastic sheet, and trace most of the picture features. Tape this to the screen so it won't move and use that as a guide while using the drawing package.

Drawing a grid over the subject to match an on-screen grid is another way to get the perspective correct. A good tip is to draw a single grid and save it, then load this in every time you start a new picture. Above all, don't be over-enthusiastic; you often find the best images are those which tend to stand alone against a simple uncluttered background. In particular, architectural subjects lend themselves to the starkness and clarity of black and white.

L S Lowry's 'View of a Town' 1980s style

I generally have three graphics discs continually in use. Two contain drawings being worked upon and the third disc has a suite of frequently used utilities. The images at this stage are not compacted, it is only when I'm totally satisfied with the final result that they receive compaction and are placed on a separate gallery disc. An efficient graphics compaction is contained in Joe's Jottings, this month – it's a variation of the original SVPIC program by David Acton and Bruce Smith from *AU*, October 1986. The compacter will also save the current mode value and the colour palette details – these are used by the loader program to ensure that the compacted screen is returned in the correct mode and that the colours are all correct.

Screen dumping

Screen dumping of finished masterpieces can be achieved from within most art packages. However, for the ultimate in flexibility, it is best to fit a printer dump ROM. Watford's *Dumpout* ROM, Computer Concepts' *Printmaster* or *Acorn User*'s *User Dump* all offer a good range of dump options but check each is compatable with your printer. By using different parameters with the command, a range of dump sizes and various special effects can usually be achieved. I've found it's also a good idea to set aside a disc and build up a collection of screen dump routines with which to experiment. These regularly appear in *Acorn User* and other computing magazines. Of particular interest were articles by Martin Phillips in the September 1986 and May 1987 issues. He compared 'standard' printer control codes, explained how screen dumps are programmed, and included example Basic and machine code routines.

May's article also carried an index of printer dump articles and listings, covering the last three years in *AU*. Printers cause more distress and confusion than almost all other problems put together.

Despite all of the difficulties, developing computer graphics is one of the most rewarding areas of computing – it can be great fun and not nearly as difficult as it first appears to be.

The Acorn User *articles and programs referred to by Paul Bayley are still available. Back issues of the magazines cost £1.75 in the UK, £2.25 in Europe and £3.75 elsewhere. Discs containing the programs from each issue are also available for £5.95 (Europe: £6.95, overseas: £7.95). For details of how to obtain them see the order form on page 129.*

CITIZEN
COMPUTER PRINTERS

"Thankfully you don't have to be any good at physics to get to grips with this printer. So I reckon 99% of the population should find it a doddle.

There are lots of different computers in this school and we haven't found one yet that this printer won't work with. What's fundamental is that all the switches controlling what the printer prints aren't jammed up behind thousands of wires, so unlike some of the more cranky models we've got here, changing the 120D is quick and easy. It also goes a bundle.

I don't know how much they cost but I do know we're getting more of them so knowing how tight they are round here they can't be that pricey. The real test has to be that it's survived the attentions of Paula, Sarah and me, so I reckon it's pretty tough. And with the right computer it produces all sorts of crucial type styles, a whole heap more absorbing than pulleys and iron filings!"

For more information call Citizen free of charge on Linkline 0800 282692.

Software for the Archimedes

£25.00 +VAT

INTER-CHART

A comprehensive chart and graph plotting package. Data can be entered directly at the keyboard or transferred from INTER-SHEET, INTER-WORD or INTER-BASE via file. This data may then be displayed in a variety of graphical forms, edited, printed, saved, etc.

Features include:

- **Up to 16 graphs available simultaneously**
- **Bar and Line graphs can be overlaid on each other**
- **Pie chart plotting: One segment can be highlighted by pulling it out from the rest of the pie chart**
- **Bar graph plotting: Individual bars can be different colours**
- **Line graph plotting: Points can be marked by a cross or unmarked; joined by a line or marked individually; shown in any colour**
- **Adjustable scales.**
- **Labelling: text may be placed at any position on the graph, allowing very flexible labelling**
- **Printing: an in-built screen dump is provided for Epson and compatible printers.**

Price: £25.00+VAT (£28.75 incl.)

WORDWISE PLUS

The most popular word processor on the BBC Micro is now available to work under the 6502 emulator on the Archimedes.

Wordwise Plus retains its ease of use and its flexibility, the full set of programming language commands, segments, 80-column preview, etc.

Wordwise Plus is supplied on disc for the Archimedes, so no ROM podule is required.

Price: Full package: £29.00+VAT (£33.35 incl.)
Upgrades: Existing owners of BBC Version, just quote serial No. Price: £10.00+VAT (£11.50 incl.)

Versions of the popular packages WORDWISE PLUS, INTER-WORD, INTER-SHEET and INTER-CHART are now available for the Archimedes, running under the 6502 emulator.

INTER-WORD, INTER-SHEET and INTER-CHART, like future packages already under development, are supplied in ROM form. Because the Archimedes has no standard sockets for additional ROMs, an additional 'ROM Podule' is required before they can be used.

Upgrades or exchanges available to existing owners. Please contact us for details.

The Computer Concepts ROM Podule

This ROM Podule will accept up to 8 ROMs, each of which may be up to 128K in size (and larger when used in conjunction with a PAL-controlled carrier). On-board software (also in ROM) provides a complete ROM filing system, offering high-speed downloading of software.

In future, the ROM board will be used by the Computer Concepts Archimedes Word Processor, Spelling Checker, Thesaurus, Drawing Package, etc.

The ROM podule is easy to fit and occupies one podule slot, allowing more than one to be fitted to any Archimedes.

Price: TBA. Anticipated availability: November 1987.

Computer Concepts Ltd

Gaddesden Place, Hemel Hempstead Herts HP2 6EX. Tel 0442 63933

£39.00 +VAT

INTER-WORD

A full-feature 'What You See Is What You Get' word processor. This is menu driven, simple to use and offers a whole host of advanced features including:

- **On-screen highlights—bold, underline and italics**
- **Ruler-controlled margins and tabulation**
- **On-screen Page breaks, headers and footers shown**
- **40, 80 and 120 column screen modes**
- **Ability to handle documents longer than BBC memory**
- **Multi-column printing**

Price: £39.00+VAT (£44.85 incl.)

£39.00 +VAT

INTER-SHEET

An easy-to-use spreadsheet, suitable for home or business use—anything from calculating the home budget to financial forecasting.

Some of INTER-SHEET's main features include:

- **Column widths individually adjustable**
- **Text or formula/number in any box**
- **Full range of mathematical formulae**
- **40, 80 and 132 column screen modes supported**
- **Files can be transferred to INTER-CHART for display as a graph, or to INTER-WORD for inclusion within documents. Data can also be read from ASCII files**
- **Any row, column or box can be locked to prevent accidental erasure**

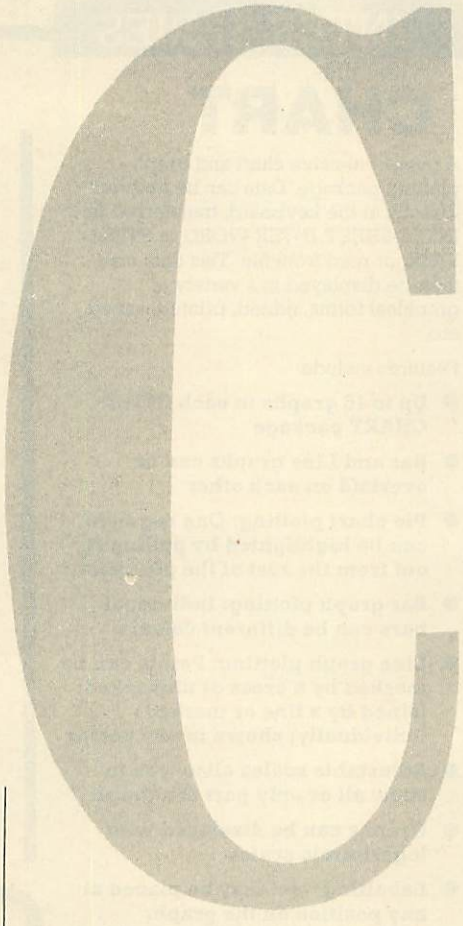

Price: £39.00+VAT (£44.85 incl.)

COMPETITION

TEN C SEEKERS

Ten lucky readers will find copies of Acornsoft C worth £100 in their Christmas stockings thanks to *Acorn User*

Graham Bell

September's competition, which revolved around changing the base of numbers, proved extremely popular, and many entrants submitted programs that they had used to solve the problems. This month's competition is for those programmers – we want the shortest program that can change a number from one base to another.

The prizes this month are real programmer's treats: we have 10 copies of Acornsoft C to give away. This package is reviewed by Adam Denning on page 149 this month. C is the latest language for the BBC micro range. It's a fully structured, compiled language similar in some ways to Pascal, but offering greater facilitites for low-level access to the operating system and hardware. Acornsoft C has a wide range of control structures, functions and data-handling commands in line with the Kernighan and Ritchie standard, and offers some extensions included in the American National Standards Institute standard.

The aim of the competition is to write the shortest BBC Basic program that can convert any number from any base to any other base. It should be able to accept any integer bases from binary to hexadecimal (two to 16), and work with any integer from zero to a million (base 10).

Shortest will not be defined as the minimum length of the program in memory, because this encourages unreadable one line programs. Instead we will judge length by the minimum number of statements in the program. Basic statements have to be separated from each other by line numbers or colons. Statements are not the same as keywords – REPEAT UNTIL GET is three keywords, but only a single statement. This allows you plenty of scope for long variable names, and readable code.

The programs should run on a standard BBC model B, so Master or Archimedes owners should ensure that they don't use any of the unique features of their machines. After writing your program entry, send the listing in to us at 20-26 Brunswick Place, London N1 6DJ, on either paper, cassette or disc. Include your name and address, and if you want your entry returned, include return postage and packaging. Put the number of statements in your code on the outside of your entry.

The competition will be judged on Friday January 8 1988. The 10 winners will be those people who submit the shortest listings. In the event of a tie, then the winners will be drawn at random, and the editors decision will be final.

Software for the BBC Micro

MEGA-ROM
A single 128K chip containing INTER-WORD, INTER-SHEET and INTER-CHART. The package contains all manuals, keystrips and quick reference cards supplied with the individual packages, but the software is *all* on a single chip, occupying just one ROM socket.

MEGA 3

128K ROM

MEGA-ROM is compatible with the entire range of BBC Micros, Model-B, B+, B+128, Master and Master Compact. A version will shortly be available for the new Archimedes.

Price: full package £85.00+VAT (£97.75 incl.)

INTER-SERIES

INTER-WORD

A full-feature 'What You See Is What You Get' word processor. This is menu driven, simple to use and offers a whole host of advanced features including:

- **On-screen highlights—bold, underline and dotted underline**
- **Ruler-controlled margins and tabulation**
- **Page breaks, headers and footers shown on-screen**
- **Information can be transferred directly to or from INTER-SHEET**
- **40, 53, 80 and a unique 106 column screen mode**
- **Ability to handle documents longer than BBC memory**
- **Fully integrated with SPELL-MASTER via a special menu**
- **Multi-column printing**

INTER-CHART

A comprehensive chart and graph plotting package. Data can be entered directly at the keyboard, transferred from INTER-SHEET, INTER-WORD or INTER-BASE, or read from file. This data may then be displayed in a variety of graphical forms, edited, printed, saved, etc.

Features include:

- **Up to 16 graphs in each INTER-CHART package**
- **Bar and Line graphs can be overlaid on each other**
- **Pie chart plotting: One segment can be highlighted by pulling it out from the rest of the pie chart**
- **Bar graph plotting: Individual bars can be different colours**
- **Line graph plotting: Points can be marked by a cross or unmarked; joined by a line or marked individually; shown in any colour**
- **Adjustable scales allow you to show all or only part of a graph**
- **Graphs can be displayed with logarithmic scales**
- **Labelling: text may be placed at any position on the graph, allowing very flexible labelling.**
- **Printing: an in-built screen dump is provided for Epson and compatible printers. Access to other screen dump programs is also supported (and documented). Compatible with the Plotmate Plotter.**

INTER-SHEET

The fastest spreadsheet available for the BBC Micro, suitable for home or business use—anything from calculating the home budget to financial forecasting.

INTER-SHEET is driven by prompts and provides a full 'help' list. Some of its main features include:

- **Columnm widths individually adjustable**
- **Text or formula/number in any box**
- **Full range of mathematical formulae**
- **48, 80 and unique 105 column screen modes supported**
- **Information can be transferred directly to INTER-CHART for display as a graph, or to INTER-WORD for inclusion within documents. Data can also be read from INTER-WORD, or from a file**
- **Fast re-calculation and replication of boxes**
- **Any row, column or box can be locked to prevent accidental erasure**

SPELL-MASTER

128K

A totally ROM-based spelling checker for use in conjunction with INTER-WORD. This allows checking of the entire text, just a marked section of the text, an individual word, instant checking as-you-type, browsing through the dictionary, etc.

A single 128K ROM, occupying just one ROM socket. This contains a standard vocabulary of almost 60,000 words (extendable in sideways RAM) and can check at an astounding speed of 10,000 words per minute.

Price: £51.30+VAT (£59.00 incl.)

INTER-BASE

64K

A database programming language with simple 'card index' interface. This will interface directly to all packages in the MEGA ROM. It allows data/results produced by INTER-SHEET to be used, output can be sent to INTER-CHART, and complex mail-merging with INTER-WORD documents can be achieved.

This is a 64K ROM, occupying just one socket. Compatible with the entire BBC Micro range (not compatible with the Archimedes).

Price: £60.00 +VAT (£69.00 incl.)

ACORN USER

- Acorn User *caters for all BBC/Acorn*
- *micro users from the*
- *learner to the advanced programmer*

CHRISTMAS

- *Stimulating, entertaining and informative*
- *features cover everything from business*
- *and education to the home*

SUBSCRIPTION

- Acorn User *keeps you abreast of the*
- *developments that affect your BBC micro*
- *Every issue is packed with news and reviews*

OFFER

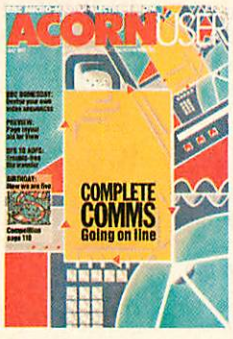

You probably don't need reminding that Christmas is just round the corner, but with the help of Acorn User *magazine Christmas shopping won't be difficult. Treat a friend, or yourself, this Christmas to a 12-month subscription to* Acorn User *magazine for only £17.50 and we will send you a free monthly listings disc or cassette.*

All you need to do to guarantee a Christmas gift that will be used and appreciated for 12 months is to fill in the coupon and choose your favourite Acorn User *monthly listings programs. We will send a free gift card to the recipient.*

Acorn User*'s monthly listings discs and cassettes contain all the major programs from the 15 pages of listings in the magazine, and some bonus ones that don't ever appear in print. The monthly listings discs and cassettes preserve your fingers, save time, avoid typing errors and best of all the programs will work first time.*

Choose your free disc from 39 discs or cassettes packed with the best programs, utilities and graphics.

Don't forget, every disc or cassette contains a stunning Graphics Bonus. So do a friend a favour or treat yourself: subscribe now and receive the disc or cassette of your choice absolutely free. There are more great Christmas gift ideas on pages 131-135.

Yes! Please start a year's subscription to Acorn User *from the* _____ *issue and send it to:*

WHY

buy time switches, a burglar alarm, and enough wiring to make it all happen?

WHEN

RED BOXES

Red Boxes provide a home automation and security system that...

WORKS OFF YOUR MICRO

Announces an intruder

Starts the washing machine

NEEDS NO SPECIAL WIRING

Discourages the would-be burglar

Tells you when the baby's crying

IS SIMPLE TO INSTALL AND USE

Switches on the electric blanket

Wakes you for Breakfast Time

DOESN'T TIE UP YOUR COMPUTER

Turns on the dishwasher

Controls your heating

IS EASY TO PROGRAM

Turns on the light when you walk in

Puts the kettle on

GIVES YOU A NETWORKING FACILITY

Switches on Crossroads

Switches off Crossroads

AND COSTS JUST £129

With Red Boxes home automation becomes a reality at last. Programmed simply and easily via your micro, Red Boxes use the mains wiring of your home to send signals which will control any appliance powered by a standard 13amp socket. That gives you control over your home environment – without wires trailing all over the place.*

Home automation with Red Boxes also provides a sophisticated security system. At one level, it is an efficient burglar alarm which can detect and announce an intruder. At another level, you can make your house appear full of life when nobody's at home, simply by programming lights, television and radio to operate in your absence.

And if you have two micros, with Red Boxes you've got a local area network as well. It's a system that expands with your needs – and your imagination in home automation applications.

Most remarkable of all, the Red Boxes starter system costs only £129. And additional Red Boxes cost just £34.95. Get yours now, by clipping the coupon. Credit card holders can call 0480 87464.

**The Red Boxes system will work off an Amstrad, BBC Micro, Commodore 64, IBM PC or Spectrum 48k/128k.*

To: Electronic Fulfilment Services, Chesterton Mill, French's Road, Cambridge CB4 3NP.

☐ *Please send me further details of the Red Boxes system.*

☐ *Please send me a Red Box starter system at £133 (including £4 p&p).*

My computer is a:

☐ *Amstrad*
☐ *BBC Micro*
☐ *Commodore 64*
☐ *IBM PC*
☐ *PC Compatible*
☐ *Spectrum 48k/128k*

Also include:

...project manuals at £9.95
...additional Red One control boxes at £36.95 each (including £2 p&p).
...additional Red Two infra red sensors at £36.95 each (including £2 p&p).

☐ *I enclose my cheque for a total of £..... made payable to General Information Systems Ltd., Readers' Account.*

☐ *Please charge a total of £..... to my Access/American Express card.*

Account number.....

Signature.....

Address _____

_____ *Postcode* _____

For credit card orders or further information, call 0480 87464.

YELLOW PAGES

INDEX/COMPATIBILITY

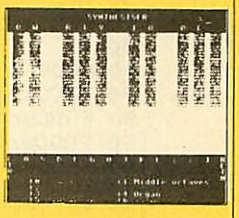

Entering listings

To make the task of entering listings easier, *Acorn User* has adopted several standards in the yellow pages. Programs are listed with line numbers in increments of 10, so type AUTO <Return> for automatic line numbering before you start. Before you list what you've entered, type LISTO 1 <Return> to provide spaces after the line numbers. Programs in the yellow pages are often listed to a width of 40 characters, so type MODE 6 <Return> before you start. Comparing the line-endings of your listing with the yellow pages will help you spot extra or missing characters.

To make sure that the program you want to enter will work on your particular machine, check the index below. All the listings work with Basic 1, 2 and 4 (unless stated otherwise) and with operating systems OS1.2 or above. If a program is accompanied by an article, please read the article first. If special care is needed when entering, we provide an easy-to-complete 'How To Enter' box.

Once you've typed in your program, save it to tape or disc then test it by running it. If you have a major problem with a listing, ask someone to check it. If you still have difficulties, you can also send off for a list of *Checksums* which help you find the errors. Send a large sae (26p stamp) to *AU*Checksums, PO Box 641, London NW9 8TF.

CALLIGRAPHY

A new dimension in letter designing

BBC/B/B+/M This is your chance to produce your own letterheads and posters to a professional standard, with the minimum of fuss and effort. *Acorn User*'s *Calligraphy* disc has been compiled due to popular demand and contains all the programs needed to produce letter designs that will impress your friends and colleagues.

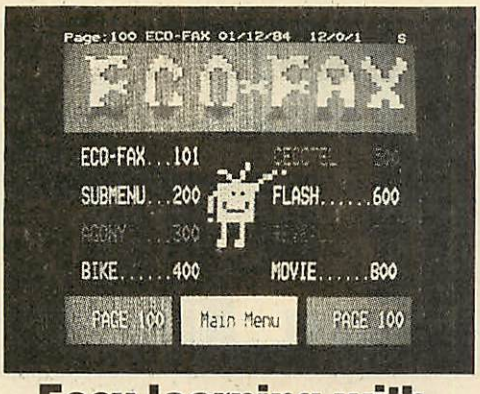

The *Desalet* program is a simple font creator which produces customised letters, to your personal design. It will save you from using repetitive data statements and error prone calculations. You can save your font set on disc and then call it up as needed. All previously saved sets can be modified or added to, and each set covers up to 94 characters.

Modical, a modification of the original *Calligraphy* program (September 1986 *Acorn User*) is also included on the disc. *Modical* allows the use of disc-based font sets created with *Desalet*. *Modical* also incorporates a modified file creation program, which permits files to be printed out immediately or saved for later printing.

An enhanced font ROM in the form of a sideways RAM image, is also on the disc. This allows you to design your own fonts for use on-screen. Any output to the printer will be in the new font – thus giving true WYSIWYG capabilities. There is a selection of new fonts to help you get started.

This superb disc comes in 5.25-inch, 40/80-track format and is great value at only £9.95.

LISTINGS

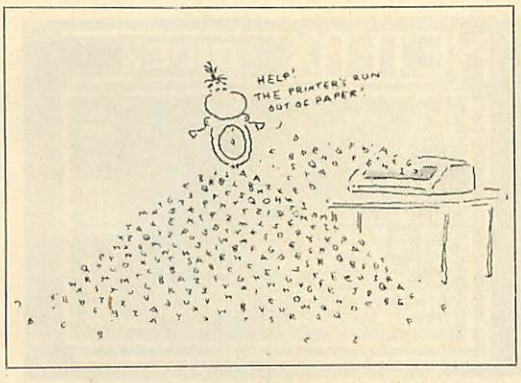

Easy learning with Education disc

BBC/B/B+/M/C The *Acorn User* Education disc makes learning easy and enjoyable. The disc is packed with useful programs, including the *Eco-fax* database for Econets.

Graphics are a strong feature, and included on the disc are *Turtle Logo*, *Easyplot* and *Bulletin*, and you can then show off your creations with *Vufoil* and *Noticeboard* or make music with *Tunemaker*. Also included are an all-mode dumping routine for Epson compatibles and a teletext dumping routine for mode 7 dumping to Epson FX80 compatibles. All this for only £7.95.

DISCS

Printer advice with Printer Help disc

BBC/B/B+/M/C Often printer manuals don't fully cover the Master and BBC micro – our disc will help you to understand your printer's facilities for just £7.95.

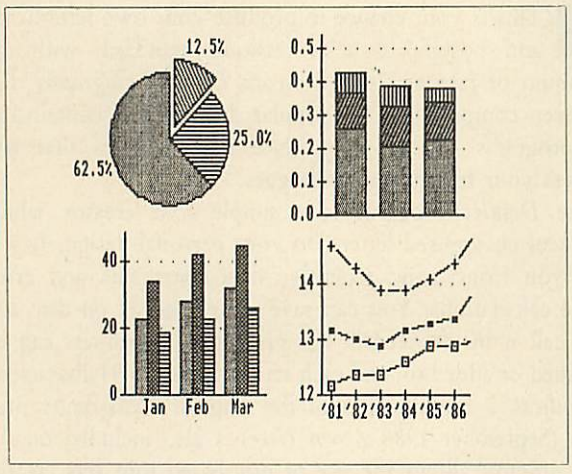

The 5.25-inch *Printer Help* disc illustrates various print type styles, use of *Wordwise* and *View*, screen images and printer care. There is an ASCII standard codes table and clear diagrams illustrating stages of printer use including advice on what to do if things go wrong.

For compatibility details write to Seran, Redwood Publishing Ltd, 20-26 Brunswick Place, London N1 6DJ.

CHART SOFTWARE

Improve your presentation with ViewChart

BBC/B/B+/M/C

Do you use your micro to prepare figures? Perhaps in *ViewSheet* or *ViewStore*? Do you make printed reports? This business graphics program from *Acorn User* contributor Peter Sandford is aimed at anyone who uses figures, and wishes to improve the quality of their work.

ViewChart takes your numeric data from a *ViewSheet* or *ViewStore* file, or manual input, and plots various chart formats to screen. In one plot you can produce between one and five piecharts, stacked bar charts up to 25 bars, grouped bar charts up to 24 bars and line graphs with up to five lines each of 40 plotted points.

In practice, most business presentation data such as sales figures, departmental breakdowns, cost analyses and so on can be presented in a form even the boss will understand!

You can even add extra text and graphics to the completed chart prior to saving or printing. A screen dump program is provided, for Epson and compatible printers, which is specifically designed to fit the width of an A4 page. Instructions are provided on interfacing to other printers. *ViewChart* works in screen mode 0, using full shading effects, so what you see on screen is what you get on paper, and includes some tips on final presentation of graphics in documents.

ViewChart is supplied on 40-track 5.25-inch disc and works on the BBC models B and B+ and Master 128.

And the price of this professional software? Just £12.95.

DISCS

Network utilities for better communication

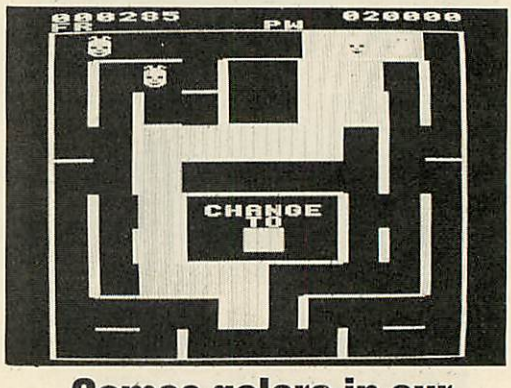

BBC/B/B+/M/C

The *Network Utilities* 80-track disc is the logical addition to your network, combining invaluable routines with a sophisticated yet easy-to-use noticeboard.

Included is *Netfax*, our own hybrid information system providing access to thousands of pages of information. Other special features are: a file locator and directory size finder; network manager utilities including a bridge compatible screen viewer and a 'notify all' facility.

Plus there are 150 *Netfax* pages covering instructions, help and indexes, all on a 5.25-inch disc for £19.95.

CASSETTES

Games galore in our compendium cassette

BBC/B/B+/M/E

You can guide Shuggy around his garden; puzzle over *Puzzle*, and be *3-D* amazed. Or destroy submarines with *Run Silent, Run Deep*. And for the really adventurous, go round the *Acorn User* office.

Best of all, try the truly different *Adventure* game written especially for the *Games Compendium* cassette by Rob Anderson. It's excellent value at £3.95.

You will also find David Acton's *Spectramania* and *Quadline* on this cassette: beat your micro, get four in a row. All are easily transferred to disc.

PROGRAM LISTINGS

This month's graphics special listings disc

Joe Telford has devised a program to design printed circuit boards on screen, and he provides a metronome circuit as an example of what you can do with it. Meanwhile Tessie Revivis shows all First Byters how to use filing systems directly from machine code.

John Downey has written software for computer artist Karl Torok, whose distinctive work harks back to the pointillist style of Seurat, as the basis of his screen dumping routine for output to plotters.

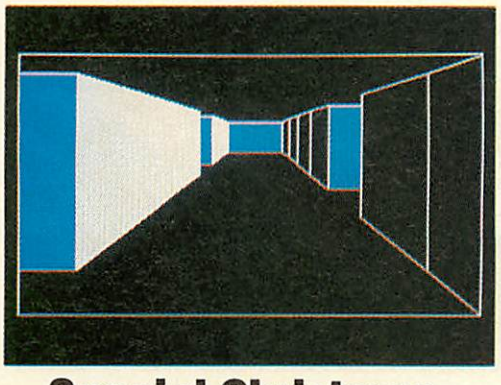

Forum for December includes an ADFS broken directory fixer by Steven Oxley – a guaranteed life saver, a *View* printer driver which allows the use of both NLQ and italic styles by Stuart Rogers; there is also an extended *FIND command allowing the use of a wild card. Jonathan Temple has provided a routine for preserving variables between programs and for all Master owners Martin Hesketh has put together a 'slow motion' ROM.

For this special graphics issue we have included a number of the remarkable drawings featured in the magazine as the month's Graphics Bonus.

December's listings are available in 5.25-inch 40/80-track disc for the BBC and Master 128 and on cassette for Electron and BBC micro users.

For our special £49 Christmas disc subscription offer please turn to page 52.

LISTINGS

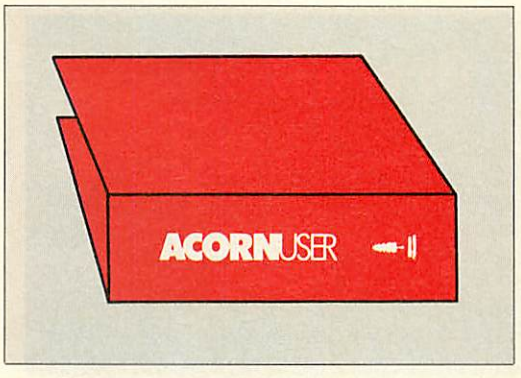

Special Christmas Subscriptions

Save up to £29 this Christmas by giving a monthly listings subscription as a gift. Every *Acorn User* monthly listings cassette or disc is packed with the very best programs, graphics and utilities.

For the Christmas period only we are offering a year's subscription to the *Acorn User* monthly discs for an unbeatable £40 – a saving of £29. And the price of a cassette subscription is a mere £35, saving £10.

But hurry we must have your order by January 31 1988! The offer is open to UK subscribers only.

BINDERS

Vastly reduced prices for disc binders

Our grey cloth disc binder is supplied with its own protective slip case and is filled with six transparent inserts, which will hold a year's supply of 5.25-inch monthly discs, and it is currently available at the special price of just £6.95.

An *Acorn User* magazine binder is the best way to keep your precious copies in pristine condition. Our smart red binder features a wide spine with the capacity to hold a whole year's issues. For only £4.95 your magazines can last a lifetime.

Acorn User **order form on page 129 – 24 hour telephone service (0672) 40825**

OFFERS

PORTFOLIO DISCS

A Portfolio of micro masterpieces

BBC/B/B+/M Jonathan Inglis, freelance illustrator and Acorn's artist-in-residence for the launch of the Master series, has assembled a portfolio of his best work exclusively for *Acorn User* readers.

The disc, which costs £9.95, contains screens that national and regional publications have commissioned Jonathan to do. Included are representations of Seurat's 'Bathers', which was used by *Time Out* for a cover, and two *Acorn User* front covers; Willow from November 1986 and Magician from January 1986, as well as several which were commissioned by *The Times* newspaper group.

Jonathan Inglis is interested in the conversion of work by the great master's to computer graphics, and three of his favourites are on the disc for you to enjoy: Seurat's 'Riverside', Vermeer's 'Lady at the Virginal' and a copy of a lithograph by Matisse.

Pixel Editor and *Super Painter* have been incorporated to let you create your own masterpieces. *Pixel Editor* allows you draw in and alter the minute detail while *Super Painter* enables you to draw lines, texture your screen and shade by mixing the eight standard colours.

The *Portfolio* disc comes in 80-track 5.25-inch format, and makes the ideal Christmas gift for the graphics fan. Enclosed with the disc is a comprehensive instruction sheet telling you more about the pictures and how the artist created them.

DISCS

Disc for all sideways RAM users

BBC/B/B+/M/C The *Sideways RAM Utilities* disc includes: *RamPad* – your computer's answer to the pad and pen. *On-Screen Fonts* – a variety of print styles available in all graphics modes. * HLP ROM – add your own help text to call up when you're stuck. Standard ROM header for use when writing your own ROMs. * RLOOK to examine the contents of your ROMs and sideways RAM images.

There are many more utilities on this 40-track 5.25-inch disc with a transfer program for 80-track users, and it's competitively priced at £9.95.

DISCS

Graphics utilities for your screens

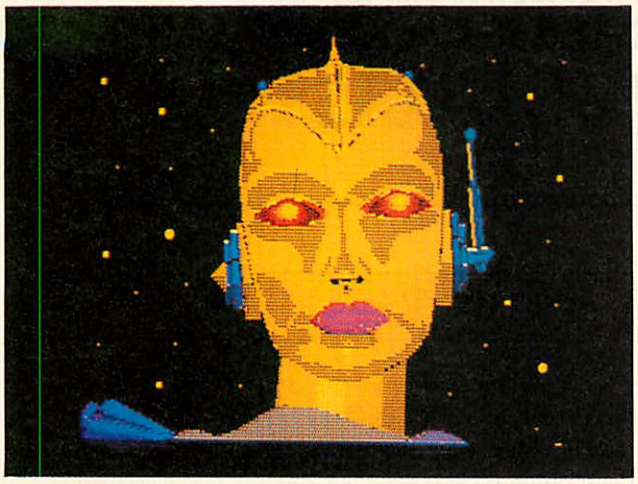

BBC/B/B+/M/C The 40-track 5.25-inch *Graphics Utilities* disc, keenly priced at £7.95, features 16 routines to manipulate blocks of graphics: rotation and reflection, a screen compressor/expander, a colour flood-fill routine and three mode conversion commands.

With the Basic procedure library are multi-height, proportional and justified text and 'drop shadow' boxes. A teletext screen editor gives point plotting, line drawing, rubber banding and flood fill, along with all mode 7 control codes. All can be used in your own programs.

OFFERS

DUMP ROMS

Printer control with the UserDump ROM

BBC/B/B+/M/C/E

This pack includes the easy-to-fit *UserDump* ROM chip and a practical 22-page guide to the screen dump and printer control facilities offered – for just £19.95.

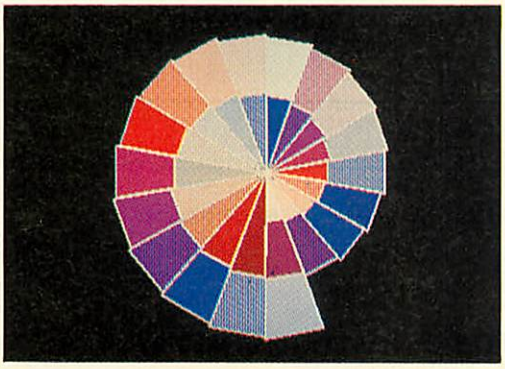

Once installed, *UserDump* will allow you to dump any screen image in any display mode by entering a single command – either as a line of your program or by typing in direct from the keyboard. A perfect dump can also be obtained while a machine code program is running.

UserDump features the following extra commands: *WDUMP – dump of graphics window only in any mode; *ZDUMP – a distortion-free dump of the mode 0 screen using plotter graphics; *TRANSIT – translate teletext screen into mode 1; *SHIFT ‹argument› – shift any area of memory; *IBM – select IBM printer; *CP80 – select CP80 printer.

UserDump is compatible with the BBC micro (model B or B+) fitted with operating system 1.2. Any earlier version will cause problems. *UserDump* is fully compatible with the Acorn 6502 second processor. It works with any printer which has single density and double density bit image graphics, including all Epson (LX, RX and FX) printers, Star Gemini and Delta, SG, SD and SR, Canon and Kaga NLQ. Also usable are the Shinwa and other CP80 printers.

There are many more commands available with *UserDump*, and details are available from Seran, Redwood Publishing Ltd., 20-26 Brunswick Place, London N1 6DJ.

ROMS

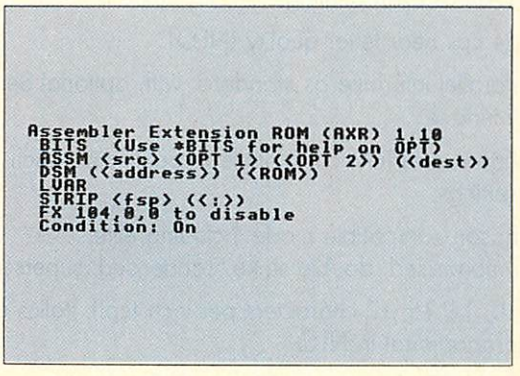

Your favourite Acorn User routines

BBC/B/B+/M/C/E

Get *UserROM* for your favourite *Acorn User* routines. Plug in the ROM chip and 19 routines are instantly accessible via star commands, including colfill with 27 colourful fills; dotfill providing 23 new black and white shades; bad program recovery; variable lister; function key lister; a graphics compiler; a circle drawing routine and a sound compiler. There are many demonstration programs and a 22 page manual. All for £19.95.

Full details are available from Seran, Redwood Publishing Ltd., 20-26 Brunswick Place, London N1 6DJ.

ROMS

Acorn User Assembler Extension ROM

BBC/B/B+/M

The *AXR* ROM, competitively priced at £19.95, is especially designed for use by machine code programmers. *AXR* adds a variety of options and commands to the Basic assembler, along with several new pseudo op codes, full Basic expression evaluation, and even the use of binary numbers. A disassembler is included in the software, and all 65C02 instructions can be used. *AXR* is compatible with Basic 1, 2 and Master.

Further details from Seran, Redwood Publishing Ltd., 20-26 Brunswick Place, London N1 6DJ.

We specialise in 2nd user equipment
Telephone for price.

All prices include post, packing etc. in (G.B.)

"THE INITIAL INVESTMENT IN A PROFITABLE ENTERPRISE"

OCT ACORN USER

FACT: Intelligent INVESTMENT in horse-racing can make you very rich indeed. A skillfully-managed investment 'bank' can multiply very quickly.

FACT: So many 'mug' punters gamble rather than INVEST, such that there is a huge pool of funds which the intelligent investors can tap to make excellent profits.

FACT: Successful investment in racing has hitherto been very hard work, as knowing which horses to be "on" has usually required many hours of painstaking study. Successful investors have largely, until now, needed to be enthusiasts.

FACT: The sophisticated analysis needed to pin point profitable racing investments can be handled by an 'expert system' designed for your home micro: you do not need to be a racing expert or an enthusiast to partake in this highly profitable activity.

FACT: Such a system is now available from DGA SOFTWARE. It's called PRO-PUNTER. It uses information from the racing press and tells you which horses to back.

FACT: Impressive results from PRO-PUNTER are regularly being proofed to the racing press. Fourteen investment advices have produced eleven winners, representing a return on capital investment of 97%.

FACT? You will be richer this time next year than you are now.

PRO-PUNTER cost £57.50 including VAT, P&P. Orders and enquiries to DGA SOFTWARE, PO BOX 36, ASHTON-UNDER-LYNE, OL7 9AJ.

Disc Software on a BBC

DOSCopy	BBC	<->	MS-DOS
TorchCopy	Torch	<->	MS-DOS
CPMCopy	CP/M	<->	MS-DOS
CPMBeeb	BBC	<->	CP/M

These four programs run on a BBC Master, Compact, B+, or B with 1770 upgrade; depending on the size of your BBC disc drives you can copy files between over 40 different formats, including:

MS-DOS: Amstrad, Apricot, Atari, Rainbow, Nimbus, IBM PC, PS/2
CP/M: Acorn Z80, Amstrad, Epson, Kaypro, Osborne, 380/480Z.
Torch CPN, BBC DFS and ADFS

Prices: £19-50 each £34-50 for any two
£49-50 for any three £59-50 for all four

Announcing - a powerful new disc editor

MEDIC

- Multi-disc — you can read and write many different disc formats - all those listed above, and many others.
- EDit — screen editing of any any sector (hex or text mode); search disc for a character string (text or binary), fill part of the disc with character or string.
- Investigate — verify discs and explore their format; format discs to your own specification.
- Clone — a powerful copying facility for many disc formats (subject to copyright requirements).

MEDIC is just what the doctor ordered for sick discs or healthy, for exploration or repair! Requires a Master, Compact, B+ or B with 1770. Supplied with documentation on MS-DOS, CP/M and BBC formats.

MEDIC - only £19.50 inclusive

REVIEWS

GAMES

THE GAMES PAGE

David Lawrences tries out winter sports, crushing bones and grappling with aliens

Next month's Games Page will be slightly different; I will be presenting my top games of the year. So, as there will be no games news next month, here's all you need to know about the Christmas releases.

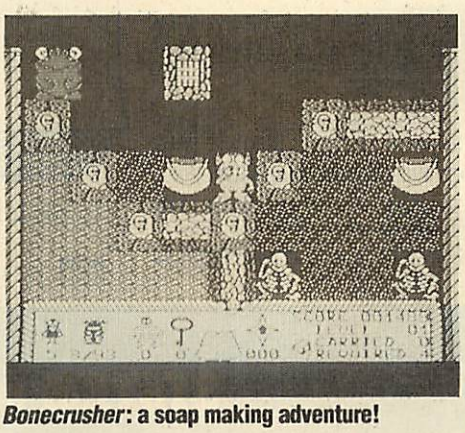

Tynesoft has two sports simulations planned for release before the end of the year. *Indosports* has been mentioned before, but *Winter Olympics II* has jumped 86 and is now called *Winter Olympics 88*. Tynesoft claims that 'this is the best sports simulation ever'. The game features six events: ski slalom, ski jump, giant slalom, three-man bob, speed skating and biathlon. Each event features large sprites and better ways of controlling the action than just pumping Z and X. Tynesoft, at least, must think that the game is good, as it is offering a trip to Calgary to see next year's real Winter Olympics as a prize!

The news from Audiogenic is that the near-mythical *Daxis* game has been passed from Gary Partis to Peter Scott for revision and finishing off. A version of *Impact* has arrived and it appears to be similar to *Arkanoid*. The consensus in the office is that the graphics of Peter Johnson's version, reviewed in October, are better.

November is going to be a busy month for Superior – it is planning three new releases. *The Life of Repton* and *Elixir* were reported last month, but the third, *Spellbinder*, was touched on only briefly.

Spellbinder has been written by two new BBC authors, Dan and Etan Shirron. It is very much in Ultimate *Knight Lore* vein, with isometric views of three-dimensional rooms. The story behind the game is fairly simple; one of the 10 original 'Magelords' has deserted, killed one of the other Magelords and hidden in a large castle. The remaining Magelords have voted to find the best qualified among them to hunt out the absconder.

This is, of course, you. It's no easy job, as the castle has been overrun by monsters,

***Bonecrusher*: a soap making adventure!**

such as the 'Gramofoot' – very Monty Python. To aid you in the quest you can cast spells, but you need the correct ingredients to concoct the spells in the first place. So off you must go in search of leg of toad, eye of bat and so on. There are clues along the way in the form of bookcases and walldwarfs (?), but most of the way, you'll have to rely on your magical intuition. The castle is spread over two floors, with seven annexes and features over 100 rooms.

In December, watch out for *Bonecruncher*. This is not, as many thought, a boxing simulation, but an entrepreneurial exercise in soap selling! You are Bono the dragon, and with the aid of your friend Golen, you must make soap and deliver it to the bathing monsters. The bone crunching bit comes in because you must collect skeletons and crush them up to make the soap. But there are too few skeletons on each level, so you must suffocate some of the smaller monsters. This is done with the help of the 'hairy' monsters!

All this takes place on a *Repton*-like four-way scrolling playing area. There are 24 graded levels in total, loaded in three sets of eight. Other features in the game include spiders, staircases, doors and a black hole.

This is actually a conversion from a Commodore 64 game. The original is also being released by Superior. *Bonecruncher* is the second game from *Palace of Magic* author, Martyn Howard.

The only other new releases I've seen recently are, in fact, adventures, which is nice considering I've hardly seen any new ones this year. The first comes from Robico, of *The Rick Hanson Trilogy* fame. The new game, *The Hunt* is a fairly easy science-fiction adventure with all of the locations graphically depicted. As well as the tape and disc versions there is a special Master implementation.

The other release comes from Incentive Software and is actually two adventures on one tape. They are both graphical adventures, although I don't know how many locations are illustrated. The first is called *The Alien from Outer Space* and is strongly based on the science-fiction/horror film, *The Thing*. The other is called *Dragon's Tooth*, a fantasy with dragons, elves, wizards and magic swords. The tapes cost £7.95, which is good value for money.

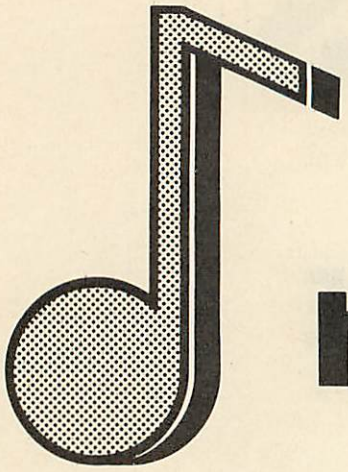

Well, that's it for news for a couple of months; watch out for 'The Games of 1987' next time.

XOR AND RAVENSKULL MAPS

Playing your favourite game and just can't get any further? Get a little extra help from *Acorn User* – we have compiled complete maps of the popular *Xor* and *Ravenskull* games.

The *Xor* maps, which could be a handy accessory to our special *Xor* offer on page 94, are available on paper for £1, or on disc for £2 (please supply the disc and state which format you require). *Ravenskull* maps cost £1.50 on paper only. Send an SAE plus cheque or postal order to *Acorn User*, Redwood Publishing, 20-26 Brunswick Place, London N1 6DJ. Mark your envelope *Xor* or *Ravenskull*.

Versions and prices

Recommended for Master Compact...
ADE+ MMU and 65C00 series assembler on disc (3.5" ADFS). 32K sideways RAM required.
£42.00 + vat

Recommended for BBC B, B+ ...
ADE+ MMU and 65C00 series assembler on 2 16K EPROMS with DFS 5.25" utilities disc.
£46.00 + vat

Recommended for Master 128, turbo...
ADE+ MMU and 65C00 series assembler on EPROM cartridge with 5.25" DFS utility disc.
£49.00 + vat

Upgrade
ADE to ADE+ (upgrade to either disc, EPROM or cartridge, you must send in ADE ROM chip)
£27.00 + vat

Upgrade
ASM to ADE + (upgrade to either disc, EPROM or cartridge, you must send in ASM ROM chip)
£35.00 + vat

Please add £1.25 P&P per unit.

ADE+

The Ultimate Assembly Language Development Tool

ADE+ is a 65C00 series assembler system supporting all the mnemonics of the 65C12 used in the latest BBC microcomputers plus the additional 'Rockwell' instructions. ADE+ is fast, faster in fact than the in-built BASIC assembler and all rival products that we have tested. The assembler produces absolute code that can be *RUN or linker modules that can be merged with the output from other programs using the ADE+ linker. ADE+ supports a powerful linker which drastically cuts assembly time; a feature normally only found on minis and mainframes. The linker will even link the output from compilers with your assembly language programs. Full library support for both the linker and the assembler is provided - fast searching for unknown instructions in a random access macro library. ADE+ is a modular system with many modules to add later; i.e. a mouse based editor & a Z80 cross assembler! A print spooling system uses sideways RAM as a print buffer to eliminate waiting time; your listing runs off as a background job! Use the print spooler from BASIC or your own programs. ADE+ uses ALL available memory. With a second processor attached the IO processor spare memory is used as a buffer to reduce the amount of disc access. All available memory is handled by ADE+'s intelligent memory management module. Use your own favourite editor or the one provided. Assemble from disc or memory. Full utilities including librarians, converter for BBC BASIC etc. ADE+ must be *the* bargain of 1986/7!

ZARCH HAS LANDED

When *Zarch*, the much heralded Archimedes game, arrived in the office, Sam Greenhill won the battle to be the first to try it out

Lander was the game supplied with the Archimedes. It was acclaimed as a revolution in software. Now Superior Software has released the full version – *Zarch*.

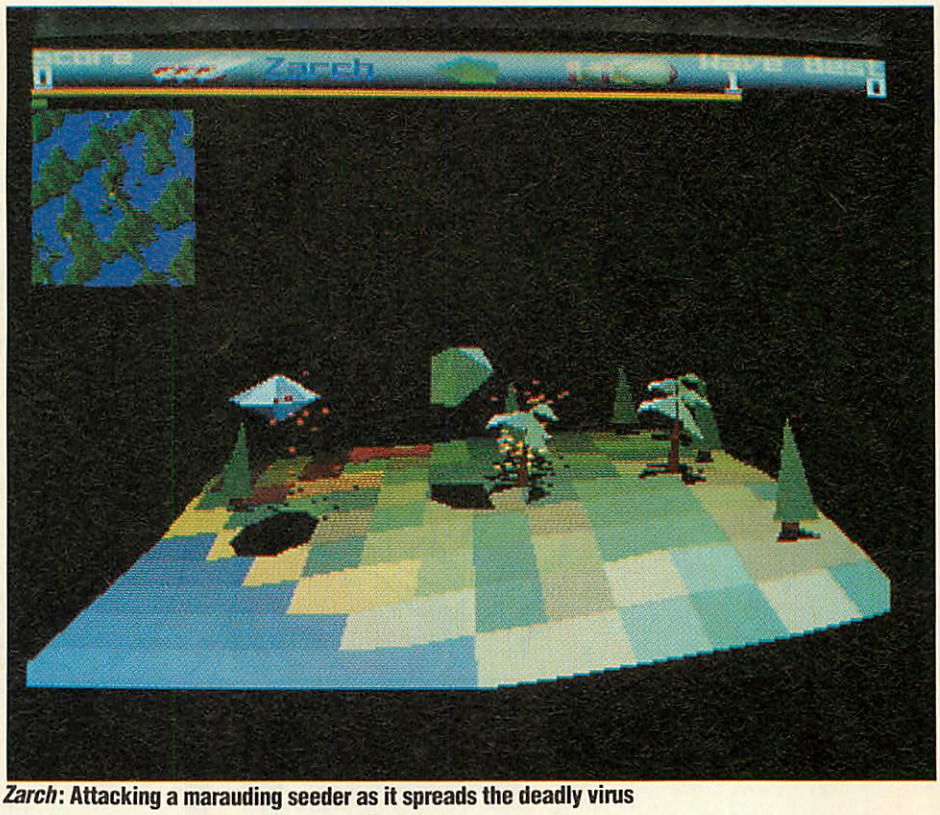

Both *Zarch* and *Lander* were written by Elite's co-author David Braben, but *Lander* includes only the basic features of the game. *Zarch* still has the three-dimensional scrolling landscape which *Lander* uses, but has other features such as an enemy, homing missiles and smart bombs.

At the start of the game you are provided with your *Zarch* hovercraft equipped with three homing missiles, two smart bombs, and a laser-cannon. The general objective of the game is to destroy the enemy craft, who are contaminating the landscape with a deadly red virus. In flying saucers called 'seeders' they patrol the land spraying out the virus which gently floats down and turns the land red. Another alien spacecraft, called a bomber, cruises along dropping small bombs in the form of parachutes, which sway as they fall, but explode spreading the red virus in all directions on impact.

Blasting these out of the sky would not be difficult if it wasn't for various alien craft that attempt to shorten your life. These come in all shapes and forms, and vary according to the current level. They also have unoriginal names such as mutant, drone and bomber. They either take a kamikaze role, or simply fire using a gun similar to your own. One, the pest, is a particularly annoying device.

Zarch's graphics greatly resemble those of *Lander*, as one might expect, but with some nice extra touches like stars and rotating shrapnel during explosions. It also incorporates sound – explosions, firing and so on. Unlike *Lander*, shooting trees and houses does nothing to aid your score; you get points solely through the destruction of enemy aircraft. You gain an extra smart bomb and life after every 5000 points, but there are no extra missiles.

Along the top of the screen is a panel which indicates your hovercraft's current condition. It shows spare lives, missiles, smart bombs, your score and the high score plus fuel level and altitude.

***Zarch*: Attacking a marauding seeder as it spreads the deadly virus**

Zarch also has a map, something that *Lander* lacked, which is constantly updated by radar scanners around the landscape. If one of these is accidentally destroyed, the area on the map that the scanner covered is replaced by a black square in which nothing is picked up. The map, which has two states, normal or zoom, shows up your hovercraft, the launch pad, the alien squadron and the landscape which is filled-in red where it is infected.

After my first game, I had scored −45, and was informed a fossilised snail could have done better, but the highest high score ranked only as 'acceptable'.

The demonstration mode starts off in a similar way to *Elite*, with the *Zarch* hovership rapidly spinning, but then goes on to play the game. It's not the same as a normal demo, where somebody has played the game and the computer recorded the movements. This one actually plays the game differently each time, thinking about reactions. It decides how to manoeuvre and when to fire, which I find fascinating.

Zarch handles in exactly the same way as *Lander*, which will allow players to get some practice in on *Zarch*'s predecessor before graduating to the game itself. The fire and thrust buttons remain the same but the hover is replaced by a smart bomb.

Once again David Braben has created a classic. *Zarch* collects top marks from me; I cannot find a single thing to criticise. Its performance is outstanding, and the graphics are stunning. The only question is whether there will be a market for Arc games in general. The people who are likely to buy the Archimedes may not be the sort that are going to want to spend large sums of money on games. Having seen it and played it, I strongly recommended it to anybody who possesses an Archimedes, as *Zarch* is remarkable.

Zarch; £19.95; Superior Software, Regent House, Skinner Lane, Leeds LS7 1AX.

ELIXIR

A FLASHBULB FLIES OVERHEAD

CLIMBING UP A STRAND OF COTTON

CLOCK-WATCHING

KEEP CLEAR OF THE BUNSEN BURNER FLAME

Help Poor Old Cyril to Find the Magic Elixir

Imagine the scene:
You are Cyril, a likeable old gentleman — the proprietor of a small but busy chemist's shop. One evening, after a hard day's work, you accidently take a swig of a potent liquid: a strong reducing agent.

Within minutes you have shrunk down to the size of a bottle of aspirins. Frightened and alone, at first you panic... then you remember the magic elixir which is stored at the back of the shop on the top shelf.

The elixir just might restore you to your normal size... it's your only hope. But can you possibly reach it; you'll have to work out a suitable route by climbing up and down and across the shelves.

A fascinating, humourous game packed with strategical puzzles and problems. Keep clear of the lipstick missiles, leap over the exploding flash-bulbs, dodge the dripping acid, and watch out for the curious "circulasaurus" creature!

BBC Micro Cassette	**£9.95**	Acorn Electron Cassette	**£9.95**
BBC Micro 5¼" Disc	**£11.95**	Acorn Electron 5¼" Disc	**£11.95**
BBC Master Compact 3½" Disc	**£14.95**	Acorn Electron 3½" Disc	**£14.95**

(Compatible with the BBC B, B+ and Master Series computers).

The screen pictures show the BBC Micro version of the game.
The graphics of other versions may vary.

PRIZE COMPETITION

If you complete Elixir (by restoring Cyril The Chemist to his normal size), you can enter our competition. Prizes include an impressive trophy, 10 chemistry sets, and signed certificates for runners-up.

Closing Date: 30th June, 1988.

REVIEWS

GAMES

BOWLED OVER

Graham Gooch's Test Cricket; Audiogenic; BBC micro; £9.95 (on disc), £11.95 (on cassette)

After numerous attempts at athletics and a few feeble excuses for football games (*Matchday* is an honourable exception), the latest sporty game for the BBC micro comes from Audiogenic, under the title *Graham Gooch's Test Cricket*.

Test Cricket is packaged in a smart plastic wallet with clear instructions and some tips for playing the games. After loading you are asked to select your team from a list of famous, and nearly famous, cricketers. This is done before you select the number of players, so if you are on your own you have to choose your opponent's team as well.

Once your teams have been chosen, you have to decide between a limited overs match, where each side bowls a stated number of overs, or a full two-innings test match. The latter can last for over three hours, and without the option to save an uncompleted game, this is a very long time!

You are also asked if you wish to play in arcade or simulation mode; if you merely enjoy watching cricket then the latter is for you. If, however, you prefer to get a little more involved with the game then try arcade mode, where each player has to bat and bowl – this is very tricky and needs some careful practice.

All input can be joystick controlled, except when picking teams through a series of menus with a moving cursor. This is very frustrating if you don't happen to be using a joystick.

Overall, an original addition to anyone's software library. But with its little niggling problems – for example, unimaginative bleeps where sound envelopes could easily have been used – not one that I'll be spending my Sundays playing!

Richard Bellis

SHAKEN NOT STIRRED

The Living Daylights; Domark; BBC micro; £12.95 (disc), £9.95 (cassette)

The packaging claims that the *The Living Daylights* is closely based on the film. I haven't seen the film, but I don't think it would add anything if I had!

The Living Daylights is a sort of *Commando/Green Beret* clone featuring eight sideways-scrolling levels and enemies of various flavours. The idea is fairly simple; help 007 battle through the levels with his trusty Walther PPK before confronting his arch enemy, Brad Whittaker, and winning the favour of the beautiful Czechoslovak cellist, Kara (she's only mentioned on the packaging).

The eight levels are meant to represent different international locations, ranging from Gibraltar to Tangier. I suppose the background graphics are slightly different!

Most screens involve a left to right dash while gunning down as many of the enemy as you can. And there are other dangers, like falling girders, poisonous darts and even flying milk bottles thrown by Necros, the obligatory ruthless killer.

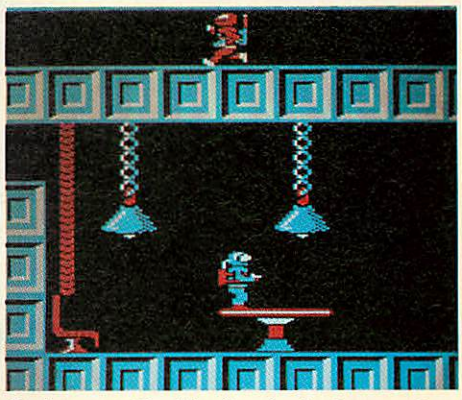

Between each level, you retire briefly to Q's workshop to pick up the latest secret weapon. It could be a crossbow, a mortar, or even a ghetto-blaster! Unfortunately, there are four to choose from in each case, only one of which is useful, and you have five seconds to choose it!

Game-play is quite fiddly, especially as the instructions don't list all the keys! (The ':' and '/' keys are jump and duck.) When under fire, cursor/gunsight movement is rather slow, making shooting soldiers difficult. The sprites are not detailed but are adequate. The backgrounds are slightly better but do not scroll very smoothly.

This isn't the best game I've seen, and has very little to recommend it except for the mode 1 digitised loading picture of Timothy Dalton!

Robert Ball

STRYKER STRIKES BACK

Codename Droid: Stryker's Run – Part 2; Superior Software; BBC and Master £9.95 (cassette), £11.95 (5.25-inch disc), Electron £9.95 (cassette), £14.95 (3.5-inch disc), Compact £14.95 (disc)

Normally when I see a sequel, I yawn and give up there and then. However, with *Codename Droid: Stryker's Run II* ('*Droid*' for short), I'm glad I didn't.

Although there are elements of *Stryker's Run* in *Droid*, they are few and far between and this makes it an almost entirely new game.

It is still a case of you against the Volgans, but this time you must infiltrate their underground base. Not being an expert in kung fu, you have been given a trusty blaster, a protective suit and a small supply of mines.

The action takes part in four zones of the base, each zone having three levels. The screen displays roughly a sixth of a zone at a time and scrolls as you move. To move between zones and levels you need the lift, and to use the lift you need a lift pass – no pass, no ride! Passes can be found dotted around the base, as can fuel cells to recharge your blaster and suit. The idea of the game is to collect some fuel rods and a navigation chip, then steal the Volgans' latest ship on the last level.

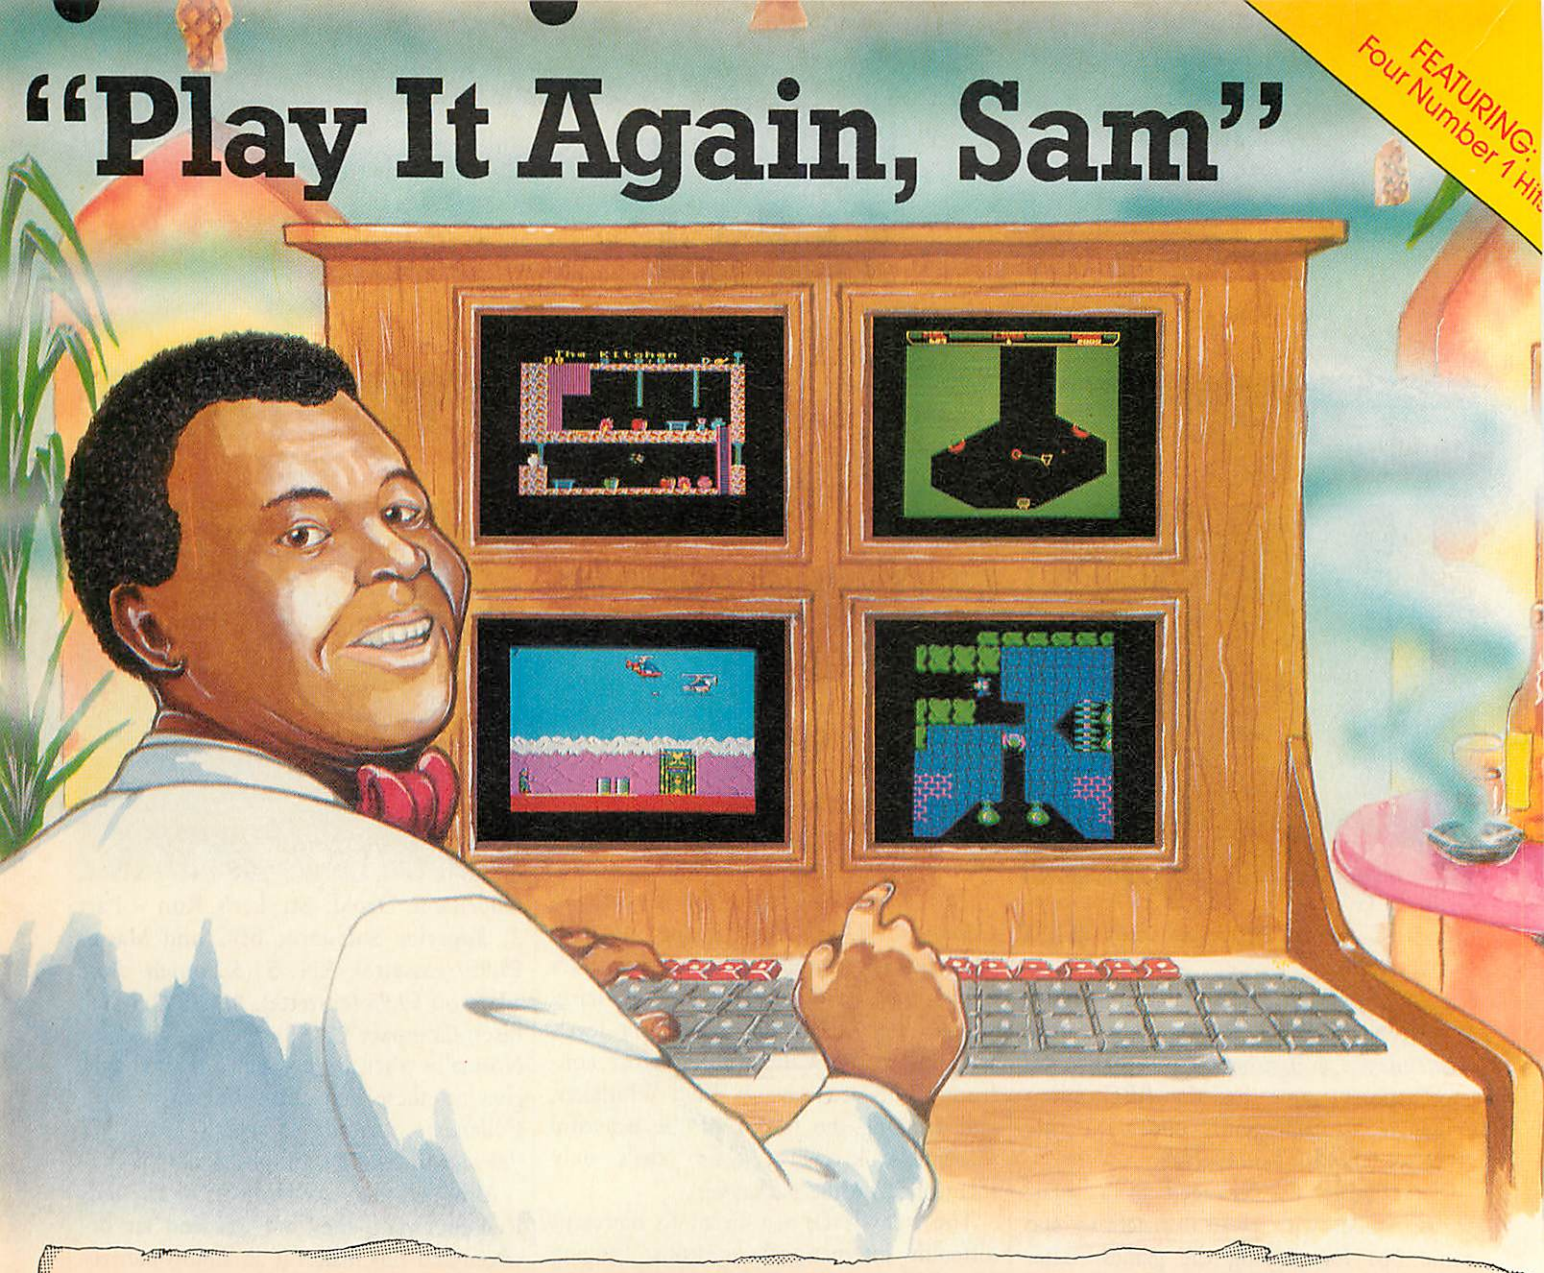

The graphics are colourful and well designed. Sprite movement is excellent with careful attention applied to the animation. The sound is simple but informative.

Overall the game is very good, if a bit easier than most puzzle-type games, although this makes a refreshing change from not being able to get anywhere!

David Lawrence

"Play It Again, Sam"

FEATURING: Four Number 1 Hits

THE BEST COMPILATION EVER
for the BBC Micro and Acorn Electron

Sam, an ardent fan of Superior Software's games, is always ready for a challenge... and the tougher the better! Here's four games that, as time goes by, he returns to again and again.

Citadel, a fascinating arcade-adventure, features over 100 beautifully detailed screens of action. Computer Gamer reported: "The game is extremely good. Well worth the cash."

Thrust is simple and fun-to-play, yet incredibly realistic and highly addictive.
"This game has class... try it!" urged Computer & Video Games.

Stryker's Run is a challenging action-packed combat game.
"This game will impress you... the graphics are stunning... this should be in every collection," A & B Computing remarked.

Ravenskull is a massive arcade-adventure game, full of puzzles and problems to be solved.
Acorn User commented: "Ravenskull is a very good game and is destined to become another Superior classic."

TO C OR NOT TO C?

You wait ages for one and then four come along all at once. . . Adam Denning looks at the implementation of C on the BBC micros

Just when everyone had written off the BBC micro family as a vehicle for the C language, four C compilers have been released in quick succession.

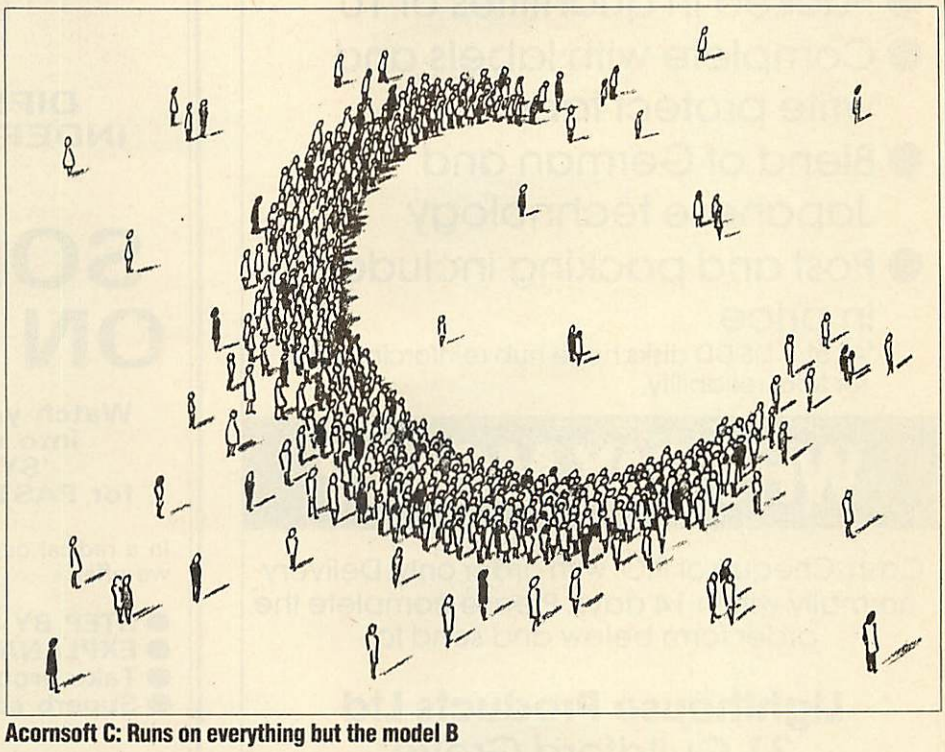

They range from full-blown Kernighan & Ritchie compilers from Acornsoft and Beebug to the Small-C implementation from Mijas. The fourth is Brasscourt's C compiler, which unfortunately was launched too late for this review. 'Kernighan & Ritchie compiler' refers to the book *The C Programming Language* written by Brian Kernighan and Dennis Ritchie. This book is the C programmers' 'bible', and it defines the C language.

Since then, there have been numerous alterations and extensions, leading to the ANSI (American National Standards Institute) draft standard for C. This will become an actual standard some time in 1988 and is the one being adopted by all major C compiler writers. Small-C is an implementation of a limited dialect of the C language and was designed by Ron Cain in the early Eighties. It was produced as a series of articles for an American magazine. Small-C is intended for small microcomputer systems, such as those based around 8080, Z80 and 6502 processors.

The Mijas C compiles the program to 6502 assembler, which can then be assembled to 6502 machine code. One thing the Acorn and Beebug implementations of the language have in common is that neither produces real 6502 machine code – they're not true compilers. Each produces an intermediate 'p-code', a highly condensed version of the program, which is then interpreted by the C system as the progam is run. The p-code is, in effect, the machine code of a fictitious pseudo-machine. The C system emulates this pseudo-machine to run the compiled C programs.

This approach is necessary because of the small number of machine registers in the 6502 chip used by the BBC micro, and because the 6502 hardware stack is so small. The popular Acornsoft ISO-Pascal takes this p-code approach too.

An obvious sacrifice in this process is speed. An interpreter converting between a pseudo-machine's language and that of the true microprocessor is bound to run a program slower than if that program was executed directly.

Acornsoft C: Runs on everything but the model B

The library is an important part of C. It is a collection of functions that are used in all programs, to control input and output, or use the filing system, or even for string handling and some mathematical functions. C itself is only the bare bones of a language, the library is what makes it into a usable system. It is designed this way so that the core of C remains as far as possible the same on all computers; the library is more prone to detailed changes because it usually has to deal with the varied hardware of each particular computer.

Acornsoft C

Acornsoft C is supplied on 80-track 5.25-inch disc and on 80-track 3.5-inch disc; the first is for DFS systems while the second caters for ADFS users. Either way it works on the B+, Master 128, Compact or a second processor – everything except a standard BBC model B. The system includes the p-code interpreter, the compiler, a linker program, libraries and a version of the usual Acorn screen editor for C program development. The debugging facilities offered by the compiler are minimal; a compiler option may be used to cause the system to display the name and argument values of each function executed, but as this is achieved just as easily by inserting relevant printing statements, it isn't much of an advance in debugging technique.

The library supplied with the system is pretty standard given the limitations of the computer system it has to run on, and it also includes a few BBC-specific extensions to allow operating system access.

One omission from the library is the complete set of mathematical functions – sine, cosine, logarithm and so on. This hampers all this implementation when writing large programs, but C is really meant as a 'systems programming language' for writing utilities. Indeed it was originally designed to write the Unix operating system. The lack of a sine function may not be such a problem for this sort of work.

One useful feature of the system is the SETPATH command – this is similar to the

AU2

Unix or MS-DOS PATH command in that it specifies a number of directories to be searched for given files. Acornsoft C uses it to locate the commands, header files and so forth, and it is intended for use with the ADFS and network filing systems.

When a program has been compiled and linked using the Acornsoft C system, it may be run from the interpreter. There is no stand-alone system so anyone who wants to run such a program will need a copy of the Acornsoft C system as well as the executable code.

Beebug C

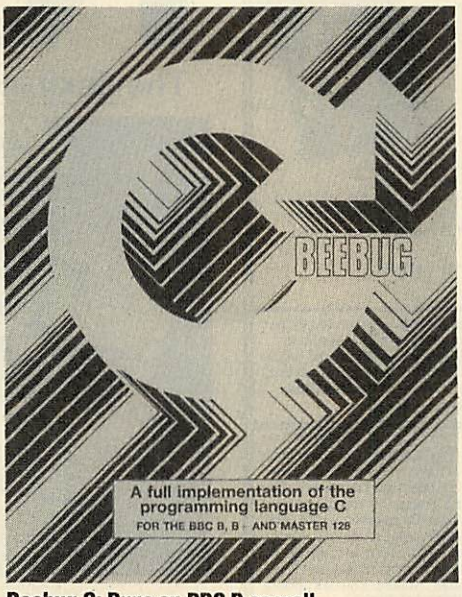

Beebug C is supplied as two 16k EPROMs and a 40/80-track 5.25-inch disc. No doubt 3.5-inch versions will be available too as the software is Compact-compatible. This system will run on a standard BBC model B or more recent machines, and it requires only one disc drive.

Like the Acornsoft system, Beebug C takes over the machine when it is selected and presents the programmer with a prompt, a $, at which you can type a small number of commands, or run a C program.

Commands exist to compile a program or link it, and sundry utility commands are provided too.

Unlike Acornsoft C, there is no editor supplied with the system. To generate and alter source programs, then, you must use a wordprocessor or text editor which is capable of creating ASCII text files, perhaps *View* or *Wordwise*, or *Edit* if you have a Master. When a source file has been created it is compiled using the environment's COMPILE command. This may be given various options, allowing you to select optimisation, define pre-processor macros, insert debugging information and generate listing files. Like Acornsoft C, the debugging facility is of minimal use. This one causes the line number, function name and source file name to be displayed when an error is encountered. An add-on package which should be considered by both Beebug and Acornsoft is a source-level debugger program.

One Beebug compiler option that ought to be unnecessary is /LSPACE, which allows you to specify the amount of space reserved by the compiler for literal space (string constants). Without knowing the details of the compiler software, I would have thought that it could be allocated

Beebug C: Runs on BBC B as well

automatically as strings are encountered in the source text. Still, it's only a minor point.

Once a program has been compiled, it, and possibly other previously compiled modules, must be combined with various library functions to create the executable program. This is the job of the LINK command. This command has options allowing you to specify the name of the output, the names of libraries to be examined, the start address and whether the program is to contain debugging information or not. The executable code thus produced may then be run using the interpreter's RUN command, which allows parameters to be passed to the program. The RUN command also allows a program's standard input, output and error streams to be re-directed, as in the Acornsoft package, but the syntax used for this is by no means standard. For example, to run a program called MYPROG with arguments arg1 and arg2 with its standard input coming from a file called INFILE and its standard output going to a file called OUTFILE, the command line would be:

```
RUN /INPUT=INFILE /OUTPUT=OUTFILE MYPROG ARG1
```

which is rather unwieldy. Considering that /INPUT=INFILE must be at least as difficult to interpret as the more usual /INFILE notation, it's a pity that Beebug hasn't chosen the standard syntax.

Beebug plans to release a stand-alone package for its C system, which will include a full trigonometric library. No doubt this will be examined in greater detail when it is released, but it is mentioned in the manual as an extra linkage option, /STAND-ALONE. When this option is available it will mean that compiled C programs may be run on systems not equipped with the Beebug C ROMs.

Mijas Small-C

This system is supplied on an 80-track disc for DFS systems or as a set of ROMs and a disc, but it is available by special request from Mijas in most other formats, including ADFS. It must be emphasised that this compiler system is quite different from the others – it is emphatically a Small-C implementation. In fact it is an implementation of the Rat-C compiler described in *A Book on C* by R E Berry and B A E Meekings.

The system comprises three distinct parts: the compiler, the 65(C)02 development system and the source-level debugger. It's ironic that a proper source-level debugger is provided with this Small-C.

The compiler is usually run with the MAKE command. This runs the compiler pre-processor, the compiler itself, the assembler and then the linker, to produce an executable program, which may be run on its own. This MAKE is quite different from the powerful program maintenance program supplied with Unix. Nevertheless, it does automate the compilation process.

The library supplied with Mijas C is fairly simple, providing only the most commonly used input and output routines, string handling operations and character classifications. Interfaces to the BBC micro's operating system are provided through functions such as _OSBYTE and _OSWORD, and as the compiler produces assembly language, it is very easy to mix Small-C and your own assembler. The code produced calls subroutines within the Small-C system to interpret the Small-C keywords and constructs. That means that the C programs can't be used alone, even though they are entirely machine code.

The Mijas 65(C)02 development system, provided with, and required by, the compiler, is an assembler, linker and debugger package for 6502 assembly language. It is useful package in its own right and was reviewed in July 1987 *Acorn User*. Perhaps it is worth considering this Small-C package as a really powerful assembly language development system, with the added advantage of a C-like language available if you want it. The source-level debugging system

POOLSWINNER II

THE ULTIMATE POOLS PREDICTION PROGRAM

Boxed, with detailed instruction booklet

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available – 22000 matches over 10 years.
- **PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture – choose as many selections as you need for your bet. The precise prediction formula can be set by the user – you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **LEAGUE AND NON-LEAGUE** All English and Scottish League teams are supported, and also the non-league sides often used on pools coupons.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

PRICE £15.00 (all inclusive)

NOW AVAILABLE

FIXGEN 87/8 AT LAST: No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish League fixtures for 1987/8. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner. Yearly updates available.

POOLSWINNER with FIXGEN £16.50 (for both)

COURSEWINNER V3

THE PUNTERS COMPUTER PROGRAM

NOT JUST A TIPSTER PROGRAM, Coursewinner V3 can be used by experts and occasional punters alike. You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc, etc. It outputs most likely winners, good long odds bets, forecasts, tricasts etc. The database includes vital course statistics for all British courses. You can update the database – never goes out of date. *FULL PRINTER SUPPORT.*

PRICE £15.00 (all inclusive) includes Flat AND National Hunt versions.

ALL PROGRAMS AVAILABLE FOR: AMSTRAD CPCs, AMSTRAD PCWs, PC1512, All BBCs, All SPECTRUMS, COMMODORE 64/128.
Supplied on tape (automatic conversion to disc) – except PCW and PC1512 (on disc – add £3.00).

ALPS – Adventure Language Programming System

Summit Software

Unshackle your imagination with the power of ALPS .

Because ALPS is a ROM it leaves you much more memory free for your games. You can have more evocative descriptions, a wider range of responses, better puzzles and so create more interesting adventures.

Features:

- Compatible with B, B+ and Master 128
- 16K eprom • user manual • Utility disk or tape.
- Can create stand-alone games
- Sell your games and profit from your investment
- At least 27K free for data (using rom)
- Multiple commands • synonyms • abbreviations
- Auto exit reporting • text editor
- Text compression • over 80 commands
- Easy data entry/editing
- Puzzles • mazes • locked doors • traps
- Secret passages • vehicles • and more. . .
- Includes a larger secret agent style adventure.

• ***Order now or send an SAE for further details.*** •

To order ALPS, simply send details of your requirements with your name, address and cheque, postal order or Access/Visa card number to:

supplied is really meant for assembler development. It manages to display the C source text by displaying the assembler source with the C program as comments. Considering that it's thrown in free, it's nothing to sniff at, and will almost certainly come in handy during program development. The catch is that to use it you cannot avoid getting down to assembly language.

Libraries

The Acornsoft and Beebug libraries take opposing approaches; Acorn provides a library conforming to the appropriate C and X/OPEN standards, but with relatively few extensions to give easy access to the BBC operating system. Most programmers could write the necessary functions in C, and two examples are given in the box. The SETTIME and READTIME functions duplicate the TIME keyword in Basic. However, they are already part of the Beebug standard library. This contains a number of other familiar-sounding functions too: VDU, SOUND, OSCLI and so on, which Acornsoft C lacks. There's also a library manager utility, whereby your own functions can be added to library files. Mijas supports only a very small library, giving just the most vital functions. Again, any new functions you do need can easily be added to a personal library.

The library system really comes into its own with ADFS. You can compile sets of standard functions separately. They lie in separate files, and just need to be linked to any program that wishes to use them – they don't need to be recompiled. With DFS, you can have so few files on a disc that this not the most practical approach. The compiler, plus its library and header files, takes up most of the space on a disc, and there is only room for about five other files. It might be best to keep all your standard functions as text files, to be read off another disc into the source code of each of your programs.

The missing trigonometric and logarithmic functions are a problem. Beebug is planning to release a full maths library and Acorn states it is 'under discussion'. Presumably its decision depends on the number of buyers for the compiler.

Benchmarks

The Acornsoft and Beebug compilers were compared using the new *Personal Computer World* benchmarks. The times for each test are given in the table, as are times for the latest version of BBC Basic. All the tests were run on the same 6502 second processor, and the compilers used identical source C code. Because of this, the 'grafscrn' test is slightly unfair to the Beebug compiler, as it doesn't make use of its PLOT function. Overall, the Acornsoft C ran these benchmarks faster, though only the integer maths program proved faster than Hi-Basic 4 (1987).

Clearly portability, not speed, is the C advantage, at least on the BBC micro. True compilers on more powerful machines in general produce fast-running programs.

The standardisation of C can be gauged from the fact that all of the example programs from the Beebug manual could be compiled under Acornsoft C, with only trivial changes – to the names of some library or header files for example. The programs themselves were to a large extent interchangeable. It is worth remembering that almost every larger computer, including the Archimedes, Macintosh, IBM PC and nearly every mainframe has a standard C compiler that could run your programs.

In conclusion, the compilers to look at are without doubt the Acornsoft and Beebug implementations. Although the Mijas Small-C is very worthy, it is hard to take a Small-C seriously when there are more complete versions available. It costs almost as much as the other systems and yet offers substantially less. Choosing between Acornsoft C and Beebug C is a little harder; they both have good libraries and a reasonable range of data types. They both support a number of the latest C language extensions. Beebug C claims the edge if you have a model B, but to compensate Acornsoft C does have a full-screen editor. Even the manuals are of similar quality, so it's probably best to judge this one in terms of brand-loyalty and price.

Acornsoft C, £89.70. Acornsoft, 645 Newmarket Road, Cambridge CBS 8PD, Tel: (0223) 214411.
Beebug C, £59; stand-alone generator, £19. Beebug, Dolphin Place, Holywell Hill, St Albans, Herts AL1 1EX, Tel: (0727) 40303.
Mijas Small-C, £50 (including assembler and debugger). Mijas, Winchester Road, Micheldever, Winchester SO21 3DG, Tel: (0962) 89352.

```

REALTIME SOLIDS MODELLER

PROFESSIONAL 3D CAD SYSTEMS

Reviews of REALTIME GRAPHICS SYSTEM: "there isn't anything yet available for the Beeb capable of producing such impressive and powerful graphics"-A&B Computing. "there is no other software to rival it"-BEEBUG.

The ***REALTIME SOLIDS MODELLER*** provides a sophisticated design tool for creating ***3D Solid or Wireframe objects*** of any complexity. Unlike other packages, this system can perform ***full colour hidden-surface removal*** for any solid object at high speed. ***Colour hardcopy*** of the designs can then be produced on a range of popular pen-plotters or printers for professional results. The package consists of a ***32k Graphics Rom, six discs and a 150 page manual.*** The design system takes all the hard work out of designing solid 3D objects by providing ***curves and surface generators*** that can create complex ***solids of revolution or extrusion*** from simple outlines; ***recursive macros*** to allow a 'building block' design approach; ***dynamic 3D Viewing*** in any graphics screen mode for full colour solid displays; ***3D Multi-Plotter Driver*** supporting ***HP-GL, Plotmate, Penman II, Hewlett Packard, Hitachi 672***, Epson HI-80, Watanabe, Sweet-P, Graphtec, Roland, Calcomp, Houston DMP, Sekonick and ***paper sizes from A0 to A4***; ***Library facilities***; and a ***Data Converto*** for interfacing to other CAD systems and applications. This system also includes a unique ***32k Solids REALTIME GRAPHICS LANGUAGE*** (Solids RGL) Rom providing ***52 star commands*** which allow ***flicker-free 3D Animation, Scientific & Mathematical plots or customised 3D packages*** to be produced from your own programs. Its unique feature is the production of realistic solid images with hidden-surfaces removed at high speed. Also includes a unique ***35,000 pixels/sec line generator*** (considerably faster than Acorn's 9000/sec) for high speed image generation. The Solids RGL is compatible with all the BBC graphics screen, plotting and colour modes including ***Shadow screen*** and is up to ***5 times faster*** than the original RGL. The 32k RGL behaves as a 16k Rom hence sideways Ram banks are not affected. For surface and line generation in excess of ***1,000,000 pixels/sec***, the Solids RGL can also drive ***Hardware Graphics boards*** like the Prisma 2/3, Cadsoft Workstation, Pluto and CMS colour cards.

MONITORING STANDARDS

Tired of your fuzzy old TV screen? Chris Drage examines the alternative – a sharp, clear monitor

Try peering closely at a TV for a few hours and you'll know why people buy special monitors for their micros. Computer monitors give sharper text and pictures, relieving the strain on your eyes.

The good news doesn't stop there. The cost of monitors has dropped considerably in recent years, while the quality and range of features have improved.

Before we look at the monitors on review, perhaps we should clear up a few technical points.

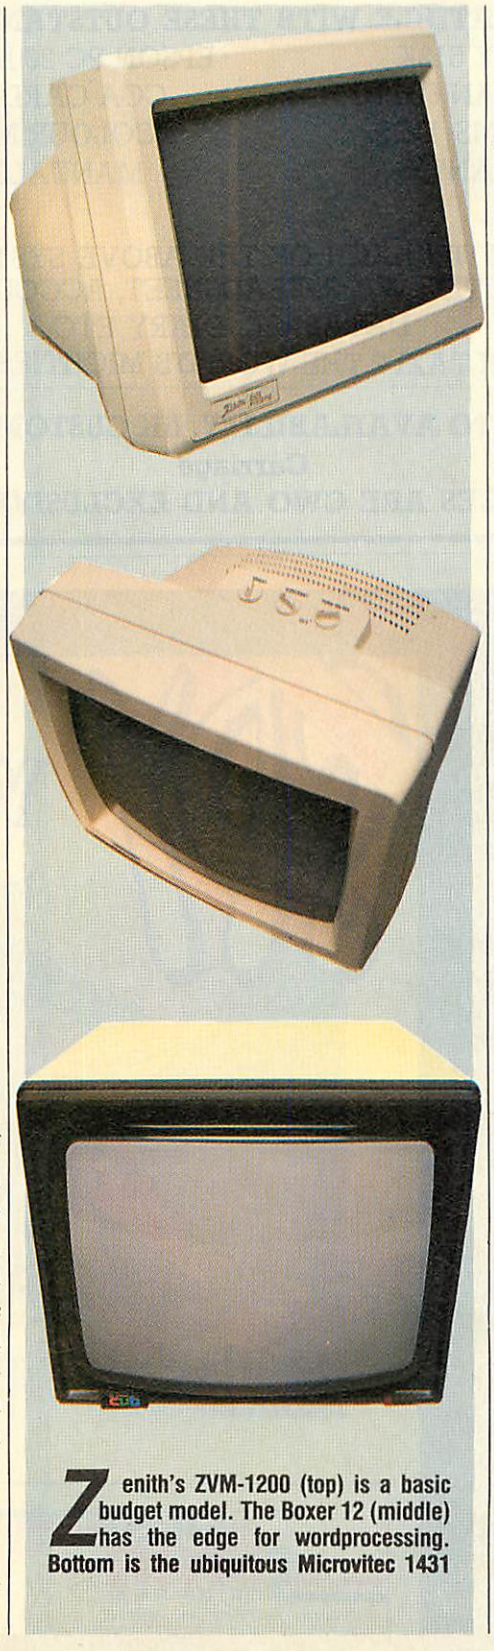

There are three different forms of video output from computers: TTL, RGB and PAL. TTL (Transistor-Transistor Logic) has separate connections for each of the colours that make up the screen (red, green and blue). Each can be either on or off, producing eight possible colours. Analogue RGB (Red, Green, Blue) output is similar, but the three colours can vary continuously from fully on to off, producing any colour of the rainbow and more besides. PAL (Phase Alternating Line) is a TV-type signal which blends the red, green and blue signals together with a carrier signal, and so requires only one connection.

The BBC micros produce a TTL signal output, while the Archimedes gives out an analogue RGB signal. Composite video is a mixture of the red, green and blue elements of a picture, and is used for the monochrome output.

A technical term which is often used when dealing with monitors is 'slot pitch'. The width of the tube is made up of vertical stripes, and the distance between them (slot pitch) gives an indication of the monitor's resolution – 0.6mm is standard, 0.4mm is medium and 0.3mm is high resolution. To test the monitors I have used a series of programs which should help you decide on clarity, colour saturation and so on. The tests are described in the box on page 161 and are included on December's monthly listings disc.

The monitors

Representing the budget end of the market, the Zenith ZVM-1200 has a number of features which will appeal to the home user. A very compact unit, the Zenith has an etched screen which makes it easy to use even in bright conditions.

Zenith's ZVM-1200 (top) is a basic budget model. The Boxer 12 (middle) has the edge for wordprocessing. Bottom is the ubiquitous Microvitec 1431

It performed most of the tests well. It did however, disappoint with the 80-column character display, mainly because of fuzziness at the corners of the screen. Test G was also fuzzy and there were interference patterns on the dots and stripes tests. I also found the interlace jitter particularly noticeable. The ZVM-1200 is not really suitable for educational use because its mains lead has a two-pin connector midway along its length, making it vulnerable to disconnection.

Hantarex markets two popular monochrome monitors, the HX-12 and the upmarket Boxer 12. The former unit can be seen as a direct competitor to the Philips 1702 range reviewed in the November 1985 issue of *Acorn User*. The HX-12 is another monitor which will appeal to home/business users on a budget. It has a noticeably curved, etched screen, a slightly squat appearance and a number of useful controls. The HX-12 performed the tests well, and all aspects of the display are adjustable by the user. I particularly liked the position of the controls.

The Boxer 12 is basically an upmarket HX-12, but with a higher quality display tube. Its resolution of 80-column text is particularly suited to wordprocessing. A slight grumble here – I found that each pixel possessed a dim trailing edge which gave each character a shadow. My only other grumble with this otherwise excellent little monitor concerns the display tones. Turning the brightness up high enough to see blue results in the white being uncomfortably bright.

The range of adjustments will please even the most ardent knob-twiddlers, and these are accessed under a panel held in place by the brightness/contrast controls. In common with the HX-12, the Boxer 12 has an etched screen. It performed the tests very well indeed and is the pick of the monochrome monitors in this review.

The Microvitec 1431 is the colour monitor which has become synonymous with

Spy Vs. Spy 1 is probably the most innovative program yet, with features never seen before on the BBC / Electron. A. & B. Review - "An excellent package, colourful and imaginative that BEEB owners rarely see. Give this one a try" ! Electron User "Overall 10/10. I have to say I have never had so much fun trying to outwit a computer at it's own game."
The program features Split Screen Action * Real Time Animation * You control your Spy's every action * One-on-One combat * Booby-Trap Calculator * Superb Graphics and Sound Effects * One or Two Players * Simulvision™ Both Players Active at the same time.
Cassette BBC B / Master / Electron - £ 9.95
BBC Disk 40 / 80 Track - £14.95
BBC Master Compact 3 1/2" Disk - £14.95

educational computing. Its familiar beige metal cabinet can be found in almost every school in the country. This budget-priced display has become the *de facto* standard by which other monitors are judged.

Although its performance based on the tests is only adequate, it can still be recommended. Its two greatest attributes are the backing given by the large network of service centres and the fact that a Touchtech-501 Touchscreen may be used with it.

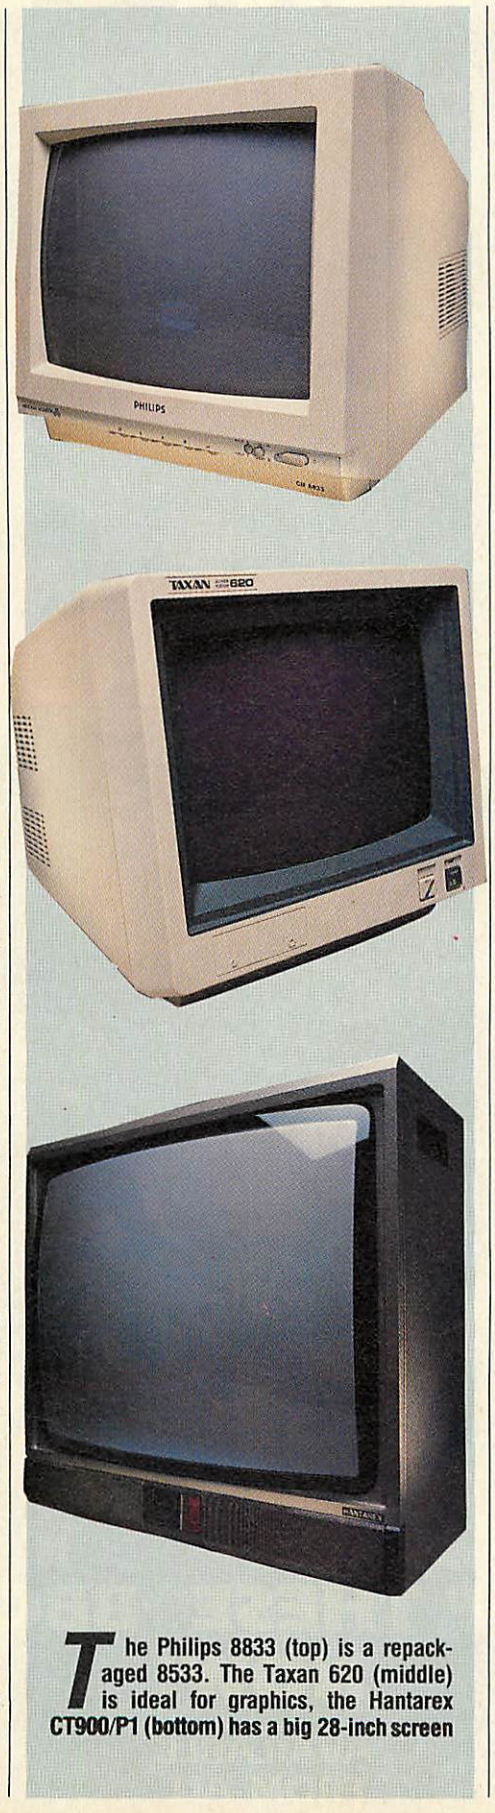

It has only one control (brightness), but the review unit was very well set up and required no further adjustments of any kind. Annoyingly, there is no carrying handle so transporting the unit is not as easy as it might be. However, for educational users, features like the moulded mains plug and sensibly spaced ventilation grilles place this monitor well within the safety regulations for even the most stringent education authorities.

At the other end of the Microvitec range is the 1441 high-resolution colour monitor. The review unit came in a stylish cream plastic cabinet which is certainly an improvement on the boxy appearance of the metal cabinet. Once again, no carrying handle is provided, but the performance of this monitor more than compensates. With a high-contrast etched screen and a slot pitch of 0.31mm, this colour monitor can truly be used for 80-column wordprocessing. Teletext screens are vividly reproduced and all colour graphics have excellent definition.

The 1441 performed the tests faultlessly and was well set up before leaving the factory. In common with other Microvitec monitors there is only one user control – brightness. The 1441 compares favourably with the popular Kaga-Taxan Vision 3 and Super Vision 3 models. The only differences are the larger 14-inch screen and the more obviously pixel-formed (stripy) characters. If you want the best display then the 1441 won't disappoint.

Several companies attempt to package a versatile VDU with a medium-resolution picture at a price most people can afford. They aim to provide an all-purpose colour screen display which functions adequately all departments.

The Microvitec 1451 AP/DS has a high-contrast display with a slot pitch of 0.43mm which results in good screen definition. It performed the tests very well indeed and can be considered for 80-column wordprocessing. The three video controls include volume, brightness and contrast. The PAL input allows it to be used with a video-recorder too. This competitively priced colour monitor can be recommended for general use with the BBC range of micros.

The Philips 8833 (top) is a repackaged 8533. The Taxan 620 (middle) is ideal for graphics, the Hantarex CT900/P1 (bottom) has a big 28-inch screen

The Philips 8533 is familiar to BBC micro users, as it is the one sold with the Compact and Archimedes computers. This model has been repackaged and marketed as the CM8833. In all other respects it is identical to the 8533. If ever there was a monitor billed as a good all-rounder then the CM8833 is it. It performed all the tests very well. The CM8833 offers unparalleled versatility as it can be used for both TTL and analogue RGB. It is the ideal monitor for those wishing to upgrade their BBC micro in the future. It also features a VCR input and, with an optional PAL tuner, can even be converted to a TV set! Although its 0.42mm slot pitch does not resolve 80-column text as well as a high-resolution monitor, with careful adjustment more than satisfactory results can be achieved – certainly good enough to be considered for wordprocessing. The CM8833 can be thoroughly recommended.

The Taxan SV620 is another very impressive unit. Lacking the versatility of the CM8833, it nevertheless performs the tests extremely well. With its slot pitch of 0.37mm, and a screen size of 12 inches, the SV620 is really in the hi-res class. This is underlined when you begin to use the unit for 80-column work – it is truly excellent. Its range of controls allow total control over the display. Interestingly, the text button can be set to generate green or amber displays to suit individual tastes.

Despite its indifferent performance with test H, the SV620 is undoubtedly ideal for graphics displays. Its colour reproduction is excellent thanks to a high contrast tube. I would have preferred to have seen a non-reflective etched screen for the money though. If you want to spoil yourself and your computer, this high quality unit won't disappoint.

Clearly the heavyweight among monitors, the Hantarex CT900/P1 SR28 is conceived as a demonstration colour display

EXCELLENT SOFTWARE FOR EXCELLENT PEOPLE

AVAILABLE FROM ALL GOOD STOCKISTS

STAR WARS is compatible with BBC Electron

where a large audience is expected. Cased in metal and weighting in at 35kg it is certainly not a unit that you would care to balance on your computer plinth! With a slot pitch of 0.8mm you may be forgiven for believing that this monitor has sub-standard resolution, but this is not the case. When viewed from the recommended minimum distance of five metres, the CT900/P1 produces a display comparable with a high-resolution monitor. It performed the tests extremely well.

The target user will not relish having to purchase more than one of these units and Hantarex has recognised this by providing the CT900/P1 with plethora of inputs and controls. Inputs include composite video, analogue RGB, TTL RGB, luminance/chrominance and audio. There are no less than 10 picture controls. This variety permits a number of different systems to be connected, including VCRs. On the audio side the unit features twin speakers. All controls and selectors under the front panel are easily accessible. This monitor is aimed at educational establishments and businesses where computers are used for seminars, demonstrations and so on.

Conclusion

If you want a budget monitor as a first buy, then the Zenith ZVM-1200 probably is as good a monitor as any to start with. For the discerning wordprocessors among you, the Boxer 12 is the best of the monochrome bunch. For those with the cash who feel the need for a high-resolution colour display, my choice would be the Taxan SV620. It beats the Microvitec 1441 on price, although the latter unit does have a more robust metal cabinet, which may sometimes be important.

Undoubtedly, the medium resolution colour monitors offer the best all round performance-for-price for BBC micro users. The Philips CM8833 is the best in this area. However, where lower cost and robustness are required the Microvitec 1451 should be considered.

For businesses or educational establishments requiring a large VDU for demonstrations, the Hantarex CT900/P1 SR28 is an extremely versatile unit. One final word about prices: do shop around for the best buy. I have listed the lowest prices I could find at the time of writing, but you may be able to better them!

TEST SUMMARY CHART

	Microvitec			Hantarex			Philips	Taxan	Zenith
	1431	1451/AP	1441	HX-12	Boxer 12	CT900/P1	CM8833	SV620	ZVM-1200

THE TEST PROCEDURE

As with previous VDU reviews, I have used the suite of test routines first published by *Acorn User* in June 1984. These appear on this month's listings disc. To the original suite of nine routines I have added two further tests (J and K), and a test card (L), to help you set up your monitor. You may find these useful when evaluating any monitor you are considering purchasing.

Test A This fills the screen with random lower case characters in mode 0. Each character should be distinct.

Test B Alternating inverse Ms and Ws. Monitors find these difficult to resolve. Particularly check the screen edges.

Test C This causes the screen to flash alternately between black and white, testing if the monitor's power supply can cope with rapid changes. The build-up of the white screen should happen instantly.

Test D There are 15 horizontal bars printed across half a mode 0 screen. The spaces between each white bar should be uniformly black, as should the right-hand screen. Uneven shades of black indicate the low frequency of the monitor.

Test E The border drawn round the screen should be straight and fit on the screen evenly on all sides.

Test F The solid circle drawn in mode 0 should be central and show no signs of being oval.

Test G This a rather severe test of a monitor's ability to resolve colours. Each band should be distinguishable.

Test H A monitor should be able to display text/graphics immediately and remove them instantly. No image should remain after the text is removed.

Test I The colour test is included to enable a comparison of the clarity, richness and depth of the colours to be made.

Test J The dot pattern is a severe test of the monitor's resolution. Check for interference patterns.

Test K Similar to J above. Again check the monitor's ability to resolve the vertical stripes without reducing them to interference patterns.

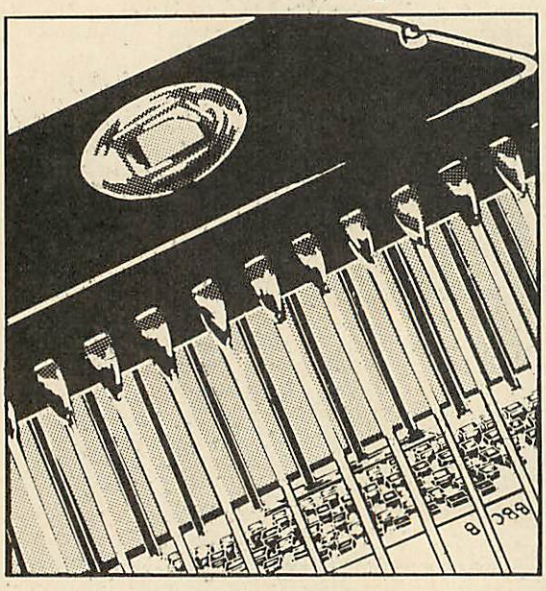

Test L Not really included as a test but as a guide for adjusting your monitor.

How each review monitor coped with these tests can be seen in the test summary chart. When making comparisons it is important to compare like with like. To compare the scores of a hi-res colour monitor with monochrome is unrealistic.

STOP PRESS

AU OFFER

Desktop publishing at a snip

Stop Press, the most highly acclaimed desktop publishing package for the BBC micro and Master 128, is being offered exclusively to *Acorn User* readers at special Christmas prices!

Stop Press comes on two 16k ROMS and two discs for the BBC, and three discs for the Master. The package includes; 16 typefaces as standard; keyboard, joystick and mouse control; user-definable fonts; text editing and formatting; cut and paste facilities; graphics, drawing and painting; comprehensive dumping routines and a mode 0 screen converter.

This professional package can be yours for Christmas from as little as £39.99, saving £10, or with the AMX Mouse for only £69.99.

Please send me

SOFTWARE

FAST AND FURIOUS

Real-time three-dimensional graphics on a BBC micro? It's possible, finds Geoff Bains

Video graphics seem to occupy more and more airtime. Television is full of images of spinning, swirling globes, cameras and all manner of everyday objects. Now BBC micro owners can get a taste of animated computer graphics and produce dynamic displays of their own.

If it wasn't for games like *Aviator*, *Elite* and *Cholo* nobody would have dreamt that complex animated sequences were even possible on a home computer. Even so, it seemed there was no way that generalised, controllable graphics could be produced on this machine.

Silicon Vision has overcome the problems and produced a package which allows even novices to produce stunning effects.

At £49.95, the *Real-Time Graphics System* is quite reasonable. It's a development of the earlier *3-D Graphics Development System* marketed by Glentop Publishing, but the author has developed the idea quite a lot further.

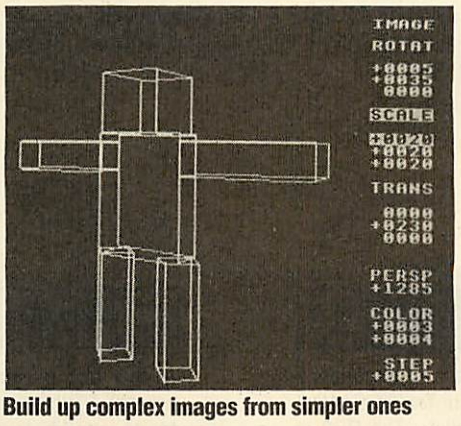

The *Real-Time Grahics System* (*RTGS*) provides a lot for the money. The system comprises no less than five discs, a 32k ROM (supplied with a carrier board to take up just one slot in the machine), and a hefty manual.

It enables the BBC micro to produce static or animated displays of wireframe images without any complicated programming effort.

The *RTGS* package is in two distinct parts. The first is concerned with constructing three-dimensional models of objects. In itself this section of the *RTGS* compares well with other similar packages, such as Design Dynamics' *Interactive 3-D* or AMS' *3-D Zicon*.

Creating a model

Before displaying a representation of any object a mathematical model must be created. If the object is only to be displayed from one viewpoint then the model can simply be the screen co-ordinates required to draw out that view on the VDU. If a more sophisticated model is required then a set of 3-D co-ordinates are needed, as well as a set of routines for manipulating these co-ordinates and projecting the new view of the object onto the screen.

Build up complex images from simpler ones

All this is simple enough to do with a little geometry and a reasonable knowledge of Basic; but the results are slow to say the least. What the *RTGS* provides is a set of general manipulation routines written in fast machine code.

The routines demand a special format of model co-ordinates. These are created using the first, menu-based, section of the package – the model designer. This is supplied on one of the five discs, although it makes use of the ROM-based routines.

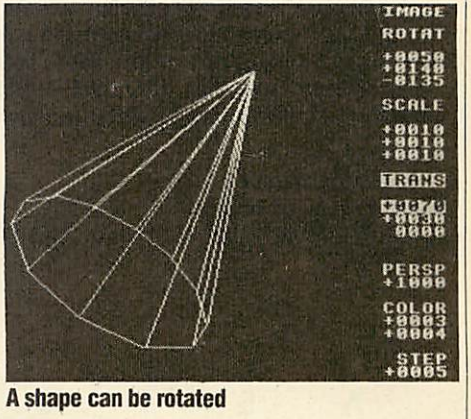

Object models are created by entering into a table the 3-D co-ordinates for each main point of the object, along with values to determine whether a line is drawn to the point and also the colour of the line.

This is the most difficult part of the whole procedure. To construct any model more complicated than a cube requires either an agile mind or graph paper.

Some help is given in the form of automatic solid generation by rotation. This enables a sphere, say, to be created by rotating a single point about another to form a circle and rotating that to form the sphere. Any solid of rotation can be created in this way with all the hard work of calculating the model data performed by the micro itself.

When the data table has been entered either manually or by the software, it can be edited simply, sections can be deleted and of course the data can be saved to disc. Entering the model data is the weakest part of the software. Given the power and flexibility of the some other features of the *RTGS* package it would have been better to have seen a more interactive model-creation procedure. Design Dynamics' *Interactive 3-D* uses cursor-controlled direct manipulation of three separate views of a model to construct a 3-D image on the screen and shows that such 'natural' systems can be achieved.

When the data has been entered, the model can be viewed from any vantage point, at any apparent distance and with variable perspective and magnification. The viewing screeen displays the model in a window occupying most of a mode 4 screen, with a menu to display and alter the co-ordinates of the vantage point and other viewing parameters.

A shape can be rotated

At this point the images of the model can be either dumped to an Epson-compatible printer or saved to disc for dumping at a later date.

Building macros

More importantly, the model can be saved for use as 'macro'. This is a model used as a simple building block as part of the creation of a far more complex object such as a figure.

By creating the macro models of just a few simple solids (cubes, tetrahedrons and the like), just about any complex model can be built up with reasonable ease. This can be done quite simply despite the inherrent difficulties of the system. It is a shame that a bigger library of common macros is not

COMPUTER GRAPHICS MADE "EASI"

ON YOUR AMSTRAD OR BBC

E A S I D R A W

A user friendly menu driven package which allows you to sketch or draw to scale with the aid of the RB2 Trackerball or the Mouse. Ideal for creating circuit diagrams and engineering drawings.

Available for:
(inc. Art or Pointer & Utils)
Amstrad CPC 6128 & 664 @16.95

E A S I L A B E L L E R

Full on screen text editing facilities allow for quick data entry and data correction. All programs are self contained and therefore the need to deal with disc files is eliminated.

Available for;
Amstrad PC 1512 & IBM Compatibles
Amstrad PCW 8256 & 8512 all priced at 34.45

E A S I A R T

An icon menu driven package which enables you to doodle or create *masterpieces*. Some of the many features inc. spray, zoom, and cut and paste.

Available for;
all BBC Models @ 49.95
Amstrad CPC Series @ 16.95

MARCONI RB2 TRACKERBALL

The RB2 design incorporates Marconi's many years of experience in making Trackerballs for the Military and for Air Traffic Control which demand maximum performance and relliability. The RB2 is designed as a quality device for the serious hobbist, for educational uses and for low cost CAD/CAM applications. It is also compatible with new games programmes now on the market.

Available for;
all BBC Models @ 55.00
Amstrad PC1512 @ 59.95
Amstrad CPC Series @ 59.95

E A S I P U B L I S H

A new and exciting menu driven package which enables you to create your own page of text and graphical information. In addition to its superb text variations and many other features, drawing which have been created on other packages can be loaded into the Easipublish package for further manipulation or the addition of text.

Available for:
Amstrad PC1512 @ 99.95
Amstrad CPC Series @ 49.95 (Disc only)

E A S I C A D

A sophisticated low cost 2D drafting system which is easy to use. The system is menu driven via the Marconi RB2 Trackerball. There are many drawing features which enables the user to produce comprehensive drawings e.g. Automatic Hatching, Automatic Dimensioning, Area moves and rotation to scale and many more. All drawings can be plotted on most well known plotters or can be dumped to a graphics printer.

Available for:
all BBC Models @ 195.00
Amstrad PC1512 @ 195.00

E A S I C A M

Is an easy to use computer assisted input CAM system which will accept geometric data direct from an EASICAD drawing, to produce a part from an EASICAD drawing, to verification, machine simulation and will download the part program to the CNC lathe machine. The system is designed to allow the user to input all the necessary information with the minimum of fuss. EASICAM is available for the wide range of machine tools.

Available for;
all BBC Models @ 195.00

provided. However, creating these yourself is simple enough and provides useful experience of the process.

All this provides static pictures only. Although the *RTGS* provides a powerful 3-D drawing package, its real power and attraction lies in the second section of the software – the real-time graphics language.

The *RTGS* ROM contains high-speed routines to calculate the screen positions for any projection of the model data. Any view which can be produced by the model design software can also be produced in double-quick time by the ROM routines under the control of your own program.

A series of simple commands are used to tell the ROM the orientation, size, perspective and so forth, of the model image. By clearing the screen, altering the parameters and re-drawing the model the image is animated.

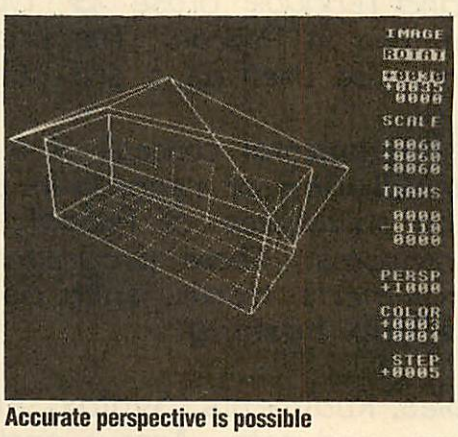

To speed things up the ROM can use its own built-in fast drawing routines (capable of plotting up to 35,000 pixels a second) instead of the BBC micro's own slower, but more fastidious code capable of a 'mere' 9000 pixels a second.

This produces a fast but rather flickery animation. The flicker can be reduced a little by surreptitiously clearing only the area just around the image. However, the *RTGS* provides an even better solution.

When using modes 4 or 5, the *RTGS* can cope with two separate screens at once, each taking up 10k. A model is drawn on one screen while the other is displayed. The screeens are then swapped instantaneously and the old image erased and a new one drawn. All this is undertaken automatically by the *RTGS* ROM, and the screens swapped each time a model is drawn. The result is perfect flicker-free animation of the same quality as seen in games like *Elite*.

The *RTGS* routines are controlled, and the parameters passed, by a peculiar and rather convoluted system. The parameters such as the co-ordinates of the viewpoint, the magnification, the perspective value to be used and so forth, are held in a parameter block in RAM. This can be changed directly by poking in new values, and this is the only realistic method of using the system from assembler, but from Basic it's tedious.

The alternative is to use specific Basic variables such as yrot% and proj% to hold the variables. Issuing a star command will

Accurate perspective is possible

then make the *RTGS* transfer the value from Basic into the parameter block. The parameters can be altered individually with a separate star command provided for updating each parameter, or updated automatically each time the model is redrawn. The first method is the quickest as the ROM only concerns itself with those parameters which change, but the second method is much simpler to program.

This is still a rather complex procedure. Using either the resident integer variables (A%-Z%) or star commands, which directly alter the parameters stored internally by the ROM, would seem a much easier method. Presumably the quest for speed is behind the choice.

Speed is certainly evident. To produce a smoothly tumbling cube on the screen needs only this kind of thing:

```
  500 xscl%=100:yscl%=10
0:zscl%=100:proj%=0
  510 *PAGE1
  520 CLS
  530 *PAGE2
  540 CLS
  550 *SCRN1
  560 *PAGE1
  570 VDU 28,14,21,25,10
  580 VDU 29,640;512;
  590 *CLS3D
  600 *TOGGLEON
  610 yrot%=30:zrot%=0
  620 FOR I%=10 TO 360 S
TEP 10
  630 xrot%=I%
  640 *RGL3D
  650 NEXT I%
  660 UNTIL FALSE
  670 END
```

Of course a working program would also need all the unused variables to be zeroed, the screen mode set, the model data loaded and a few other chores done. However, this serves to show how simple using the *RTGS* really is.

With very complex models, or when many different objects are to appear on the screen at once, the *RTGS* soon meets its limitations. However, all generalised 3-D display software has similar limits and the *RTGS* scores well above the majority of other systems on most counts.

For users interested in getting around these limitations the RTGS provides another level of usage. The primitive routines in the ROM are available for direct use by the programmer. These routines are mainly concerned with the mathematics of the 3-D perspective transformation and the projection required to generate a three-dimensional image.

Using the *CALC command a set of 3-D co-ordinates can be individually (and extremely speedily) turned into the corresponding screen co-ordinates, according to the rotation, scaling, perspective, and other factors current at the time.

This enables you to write your own display routines, which could get around difficulties associated with the methods normally used by the system. For the really ambitious, the system even provides the possibility of extensions to drive external graphics cards, such as the Pluto boards, for displays of professional speed and quality.

To help you get to grips with the system, a well-written 100-page manual is provided and the five discs contain a great many demonstration programs. The discs also contain a multi-plotter driver disc for driving popular plotter models, a database of model data and demonstration programs, as well as data provided for familiarisation with the software.

These programs are essential as using the *RTGS* takes quite some getting used to. However, the effort is certainly worth it. If you are interested in using your Beeb for real-time graphics displays there is no better package currently available and no more dramatic demonstration of the potential of the machine.

The Real-Time Graphics System *is compatible with all versions of the BBC micro and costs £49.95 from Silicon Visions, 47 Dudley Gardens, Harrow, Middlesex, HA2 0DQ. Tel: 01-422 2274.*

CAMBRIDGE

ILLUSTRATING PASCAL by DONALD ALCOCK

Using the same successful formula as in his previous books ≈ pictorial presentation with simple and readable prose ≈ Donald Alcock now presents an introduction to programming in Pascal. The book covers Pascal to BS 6192 and ISO 7185. and may be used as a self-contained reference manual.

The author starts with the fundamental concept of a stored program and works through to the manipulation of records in dynamic storage. Besides defining the statements and structures of Pascal, he illustrates their use in small but complete programs. These programs also introduce fundamental tools of the programmer's trade, such as sorting methods, linked lists, binary trees, rings and hashing.

Contents: Preface, Principles, Rudiments, Syntax, Arithmetic, Control, Functions and procedures, Types and sets, Arrays and strings, Records, Files, Interactive input, Dynamic storage, Dynamic strings, Bibliography, Quick reference, Index.

184 pp 1987 0 521 33695 3 Spiral bound £8.50 net

UNISTAT-II

MARK 2 STATISTICAL PACKAGE

***FULLY INTEGRATED SUITE OF STATISTICAL PROGRAMS * DEDICATED DATA PROCESSOR * AUTOMATED MISSING DATA HANDLING * USER DEFINED LABELS FOR VARIABLES * READING DATA FROM ASCII FILES * DIRECTION OF OUTPUT TO PRINTER OR ASCII FILES * HIGH-RESOLUTION PLOTS * COMPREHENSIVE USER MANUAL**

UNISTAT DATA PROCESSOR: A spreadsheet designed exclusively for data handling. DATA ENTRY: Cursor editing, overwrite/insert modes, continuous entry, insertion and deletion of cells, cols and rows, go to, col labels. FILE HANDLING: Read, write and merge in internal and ASCII format. COLUMN TRANSFORMATIONS: Formulas using cols as variables. Any combination of +, −, *, /, ^, LOG, EXP, SQR, ABS, SIN, etc. Operations with col numbers or labels. STATISTICAL COMMANDS: SIZE, MIS (no of missing values in a col), SUM, SSQ, MEAN (adjusted for missing values). Single or multi col sorting in asc or desc order. Ranks. CONDITIONAL FORMULAS: Selection of cases, creation of dummy and effect vars, recoding, breakdown, etc. Logical operators >, <, =, AND, OR, NOT.

MULTIVARIATE REGRESSION: Simple corr matrix, choice of dep var, selection of indep vars, noconstant reg. Selection-specific missing data handling. No. of rows and cols omitted due to missing values and multicollinearity. Output includes estimated coeffs, t-stats, std errors, R2, adjusted R2, std error of reg, F-stat, D-W stat, ANOVA of reg, var-covar and multiple corr matrices, interpolation, plot of residuals, plot of actual and fitted y values. Addition of residuals and/or fitted y values to data matrix.

STATISTICAL TESTS: Significance levels for most test stats. Test-specific missing value handling. PARAMETRIC: One sample t, two sample t with equal and unequal vars, paired t, F. NON PARAMETRIC: Chi-sqr and Kolmogorov-Smirnov, (both with equal and unequal exp freq versions), chi-sqr Bartlett, Mann-Whitney U for small, medium and large samples, Wilcoxon signed rank, Walsh, Wald-Wolfwitz runs. Kruskal-Wallis one-way ANOVA, Friedman pseudo two-way ANOVA, Jonckheere trend, Page's L, Cochran Q, Goodman-Kruskal gamma, Sommer's d. CORRELATION COEFFICIENTS: Pearson, Spearman's rho, Kendall's tau, Point biserial, Goodman-Kruskal gamma, Sommer's d, Yule's Q, phi, tetrachoric. DISTRIBUTIONS: Chi-sqr, t, F, Normal (std, non std), log, inverse and bivariate normal, binomial, negative binomial, exponential, hypergeometric, gamma function, Khrgian-Mazin.

DESCRIPTIVE STATISTICS: Analysis of raw data or data with freq counts. Raw data sorted and grouped. Freq dist with choice of lower bounds and class intervals. Absolute, cumulative and relative freq. Histograms, scatter diagrams and time series plots. Output includes sum, mean, mean deviation, median, variance, std deviation, third and fourth moments, skewness, kurtosis, range, etc.

ANALYSIS OF VARIANCE: One-way with and without repeated measures, two-way with no interaction, two-way and three-way with one, two and without repeated measures.

TABULATIONS: CROSS-TABLUATION: Two-way tables with col and row totals and percentages. CHI-SQUARE CONTINGENCY TABLE: Observed freq, exp freq and chi-sqr for each cell. Col and row sums, overall chi-square stat and its significance level. Yates correction.

HIGH RES PLOTS: All plots can be dumped on the printer. PLOT OF BIVARIATE REGRESSION: Scatter diagrams with optional line of best fit, intercept, slope, R2, std error. CURVE FITTING: Fitting of polynomials on bivariate data. Fitted polynomial coeff, R2 and std error. TIME SERIES PLOTS: Simultaneous plotting of up to 7 columns of data against time. PLOT OF FUNCTIONS: Simultaneous plotting of up to two functions, integrals, polynomials and roots of polynomials.

DEFAULT SETTINGS (For BBC version): Choice of screen and device control parameters. 40 or 80 column display, number of data drive 0/1/2/3, black & white or colour monitor width of printer, high-res screen dump command, maximum formula length, maximum number of columns and rows depending on free RAM.

LINTPRO Linear/Integer Programming Package.

Written by Dr D. Sprevak

A professional package which can solve very large problems on a 32K BBC micro by means of revised simplex algorithm and efficient vectorisation. It can solve a problem with 82 variables, 60 constraints and 15 upper bounds in 24 minutes. Runs faster on second processor, Plus or Master series. LINTPRO requires minimal prior knowledge of linear programming techniques and is ideal for real applications as well as for teaching purposes. Data entry in Backus-Naur notation. Selection of optimality of solutions between 0% and 100%. Optional printing of intermediary steps and choice of branching strategies. Output includes optimal values of variables, value of objective function, slackness, shadow prices and it can be directed to screen or to a text file.

CPA Critical Path Analysis

Written by Dr J. S. Dean

A comprehensive coverage of critical path analysis sufficient for most practical applications. Activities and durations are supplied as input and earliest and latest start and finish times for each activity, total float and critical path are obtained as output. Easy editing of inputs provides the possibility of analysing the sensitivity of solutions. A built-in calendar can give dates to any programme. Resources can be allocated to each activity. Suitable smoothing scheme is chosen and a resource bar chart is drawn. Results can be directed to printer or to text files. High-res plot of the node structure can be dumped on printer.

UNISTAT-II, LINTPRO AND CPA ARE AVAILABLE FOR: BBC B, PLUS AND MASTER SERIES, AMSTRAD PCW8256, PCW8512, IBM PC/XT/AT AND COMPATIBLES BBC versions: UNISTAT-II: £125+VAT, LINTPRO: £75+VAT, CPA: £50+VAT. AMSTRAD and IBM versions: UNISTAT-II: £150+VAT, LINTPRO: £100+VAT, CPA: £75+VAT.

Prices include post & packing within the UK. Official (government, university, local authority) orders are welcome. For orders from Europe add £5, from outside Europe £10. For BBC versions please indicate 40 or 80 track format. Cheques and correspondence to: **UNISOFT LTD, P.O. Box 383, Highgate, London N6 5UP.**

EDUCATION

NEWS

Magazine index price cut

The price of the *Magazine Bibliography* from McHugh Enterprises has been drastically cut. The bibliography, which has 23,000 entries, now costs £5 for each of the 17 parts.

The index covers all articles in *Acorn User* and the other Acorn magazines. The database can be searched by keyword, and it takes about a minute to scan any one magazine. It is also available to LEAs on licence for £25 per part, and may then be copied by all the schools in that district.

On-screen lab simulation

Shell Softlab *Guides to Laboratory Work* simulate a first-class science laboratory – on a screen. New titles such as *DC Electricity* and *Heat and Temperature* allow you to assemble lab equipment on screen and 'perform' experiments. There are also pre-packaged experiments on disc.

The programs are Econet-compatible and teacher's notes are available. The titles cost £14.95 each and are available from Holder and Stoughton.

Droom for Archimedes

Droom has been re-written for the Archimedes. The original BBC B version of Resource's *Droom* is popular with primary schools for its imaginative graphics and clear text. Programmer Derek Allen has utilised the new graphics facilities of the Archimedes to enhance *Droom*'s screen display.

This package shows the difference between rewritten software and software which has been modified to run on the Archimedes' 6502 emulator. The latter will look the same and run slightly slower than on a model B. A re-write takes advantage of the new screen modes, better colours, and is much faster.

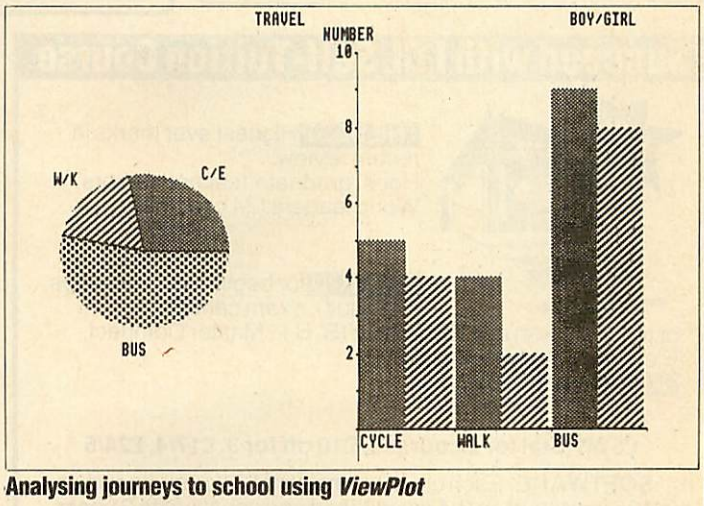

Acorn hopes that much more software re-writing than simple emulation will take place. If it doesn't, then the the extra facilities of the more powerful machine be largely redundant.

The latest Acorn Archimedes software catalogue lists over 75 educational programs to run on the Archimedes, plus 40 others using the 6502 emulator. Many of these are existing BBC B titles, written in BBC Basic, which needed little or no modification for the Arc.

School graphics tutor

Teachers seeking to widen the use of computers in their schools will welcome the *Across the Curriculum* packs from the Microelectronics in Education Development Unit (MEDU). The packs are designed to help teachers use existing software.

Graphics Across the Curriculum demonstrates the use of *ViewPlot* to display data. It uses worked examples in fields such as history, childcare, biology, CDT and home economics. Each subject is considered via a case study and examples are worked by reference to the screen prompts generated by *ViewPlot*.

Analysing journeys to school using *ViewPlot*

A second package, *Spreadsheets Across the Curriculum*, examines the integration of *ViewSheet* in several subject areas. The packs cost £7.50.

Simple type

Typesetter! from Sherston Software has been extended with a 'primary writing' font disc. The letters are formed in the clear and simple fashion taught by primary teachers.

The price of the font disc will be low, around £5, to discourage copying of discs.

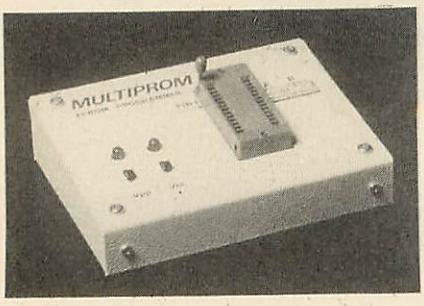

Adventures in IT

Scoop is an adventure game aimed at English and business studies students. The main character, a journalist, has to use information technology electronics including Prestel, telex and fax.

The package is designed to be integrated into the teacher's classwork. Extension tasks, not all related to the computer, cover ethical and social questions, as well as the technology.

The software, which is part of the Computers in the Curriculum project, costs £12.50 on 40-or 80-track disc and is distributed by British Telecom.

MULTIPROM EPROM PROGRAMMER

The UVIPAC was designed especially for the home microcomputer enthusiast, requiring to erase up to three EPROMs at a time.

- Very compact 90 x 80 x 40mm plastic case.
- 230 volt mains powered (110 Volt optional).
- Three EPROM or one CPU capacity.
- Positive on indication, using fibre optics.
- Fixed 15 minute timer option in (T) version.
- Fixed timer + sounder in (TS) version.
- Spare tubes only £3.00 if required.

Prices:	MULTIPROM	UVP 1.1 ROM
	£44.95	£5.00

UVIPAC EPROM ERASER

The MULTIPROM EPROM programmer, based on our very popular UVIPROM design, has the following Hardware Features:-

- Programs 2764,27128,27256,27512,27513 & 27011 EPROMs, including "A" & CMOS types.
- Plugs into user port on BBC B, 128 or Master.
- High quality Textool ZIF socket.
- ZIF can be powered down.
- Quick setting of EPROM type using DIP switches.
- Custom made aluminium case in textured cream colour.

The UVP 1.1 ROM contains:-

- Fast or slow programming algorithm.
- Hex & ASCII screen display.
- Five * commands for blank check, read, blow, view buffer & compare.

Prices	UVIPAC	UVIPAC (T)	UVIPAC (TS)
	£21.45	£26.45	£28.45

MULTIPROM + UVIPAC (T) SPECIAL OFFER!!!

Buy a MULTIPROM, a UVP 1.1 ROM and UVIPAC (T) for only **£70.00**, a saving of £6.40 over the regular price. This offer lasts until Dec 31st 1987. In stock for immediate delivery on receipt of your order.

EPROMS	Type	1–2	3–9	10 up

INSTAT

Probably the best statistics package in the world. . .

INSTAT is available for PC's and BBC Microcomputers

INSTAT is a general purpose statistics package for interactive data analysis. It is useful for statistics teaching and for any research requiring statistical analysis of data.

Facilities include:

- **easy data entry and editing**
- **descriptive statistics**
- **multiple regression**
- **multiway tables**
- **probability distributions**
- **extensive help facilities**
- **calculations**
- **powerful plotting**
- **ANOVA**
- **random sample generation**
- **macros**
- **. . . and much more. . .**

". . . where extensive use is made of statistics and a BBC micro can be devoted to the purpose, INSTAT is quite simply the best". Acorn User can be devoted to the purpose, Acorn User January 1987

". . . the authors of INSTAT clearly believe that they have produced something rather special. I, for one, would agree with them". Iain Currie, THES, June 1987

Prices (educational and multiple copy discounts available):

INSTAT BBC **£85 + VAT**
(disc, EPROM, Introductory, Reference and Supplementary Guides)

INSTAT PC **£100+VAT**
(disc, Introductory and Reference Guides)
BBC Basic (86) is essential to run INSTAT PC **£95+VAT**

For further details: Alison Ansell, Statistical Services Centre, Department of Applied Statistics, University of Reading, Reading. RG6 2AN Tel: 0734 875123 x 460 and 0734 861239 (24hr)

PLANNING THE FUTURE

You cannot get the best from your school's micros without a strategy for information technology

Chris Drage and Nick Evans

The Government's Educational Support Grant (ESG) initiative, which gives £19 million for raising the profile of computers in schools, highlights the importance of adviser and teacher training in this process. The large number of new advisory teachers seconded – 700 over two years – also indicates the substantial scale of the task. This month we look at a few of the issues that need to be tackled both by the trainers and those being trained.

Computers in schools have been with us for five years now, since the Government's first scheme which put a computer into almost every school. What was to be done with it remained largely a mystery in the early days. When the possibilities of new technology in the classroom were explored in part by bodies such as the MEP, a certain unity of purpose and direction emerged. This may be summarised in the following way:

- You can learn about computers
- You can learn with computers
- You can use the computer as a tool – a stimulus for ideas, a resource and a means to gain access to new information.

The emphasis on these different aspects has changed during the development of the use of computers and information technology (IT) in the classroom. Computer studies is still a popular subject, but it is no longer the only way a child can gain access to a computer in a secondary school. Although many primary teachers have found the arithmetical drill and practice program a useful supplement to their own teaching, most can now see a much broader range of computer uses. The processes that brought this state of affairs about are discussed in *The Microtechnology Report* from Resource.

The main problem that the new ESG advisory teachers will have to deal with is the existing inequality of provision of materials in schools. This doesn't only relate to the amount or value of hardware and software, but also to its nature. Much school software has been bought to teach specific things – formation of ox-bow lakes, the microprocessor's fetch-execute cycle or geometric transformation for example. This has often been done without regard to any integrated policy or curricular structure. Although these items have their individual value, they make more coherent computer use across the curriculum difficult. This is not to argue that schools should have identical materials, centrally purchased and handed down from on high. It is obvious that schools have different needs. However, providing packs of wide-ranging materials that cross course or subject boundaries and encourage an open-ended, exploratory approach to learning is definitely to be encouraged.

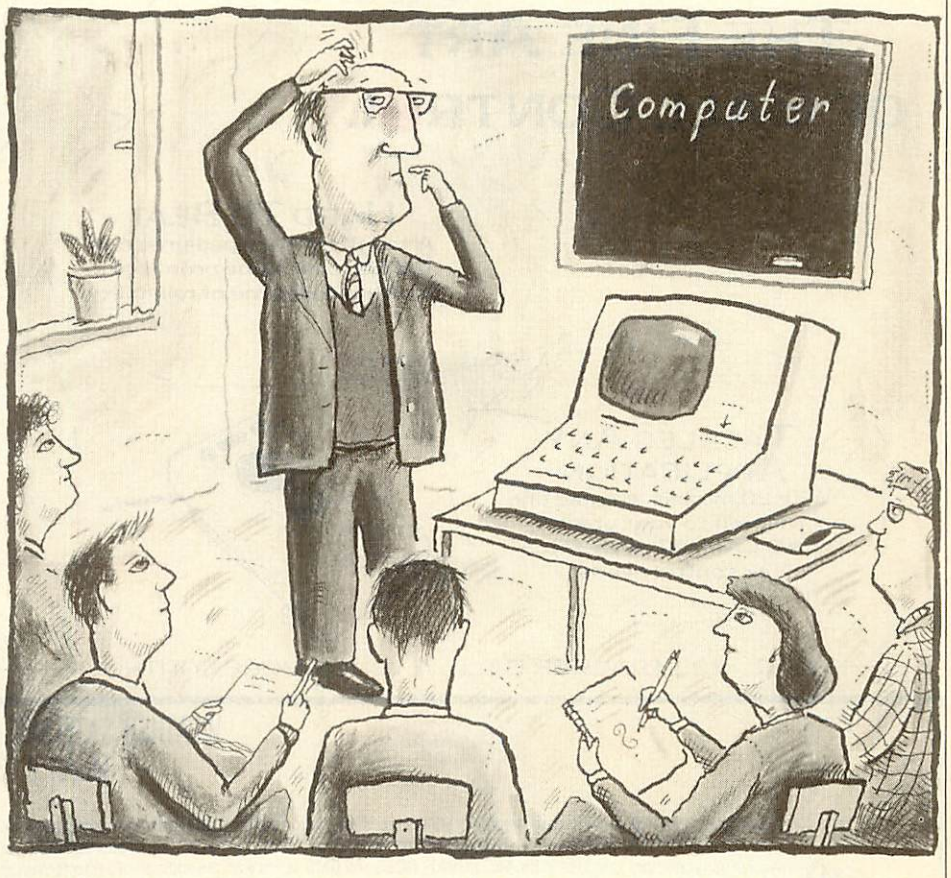

ILLUSTRATION BY AXEL SCHEFFLER

In the humanities for example, there are already a range of packages which look at a topic from an historical viewpoint, then relate to geographical issues and go on to develop the social and moral aspects. This encourages children to understand that human development is not governed by single influences acting in isolation.

The first question that many teachers will ask, especially if they have recently been made responsible for IT in their school, is 'Where should I begin with my IT plan?' The obvious starting point for any school is to look at the available tools. Wordprocessors, database management systems, spreadsheets, graphics packages, desktop publishing software and communications are all likely to be needed.

The problem is not solved by making that list. There is such a wide range of each type of tool available. As far as possible the school should try to choose software tools which will allow information to be passed between the various packages. Unfortunately such software is sometimes unfriendly or difficult to use, but newer generations of software do seem to be improving. So, for example, the *Inter* suite from Computer Concepts provides all of the four main business tools in a powerful but relatively flexible form.

It's expensive to buy this type of software, however, as it is highly sophisticated. You may decide that something very simple and straightforward is all you need at the moment, in which case a package like

'The Domesday Project is a trademark of The British Broadcasting Corporation'

THE FINE ART OF BALL CONTROL

A WHOLE NEW BALL GAME

Tracker Ball is the professionals answer to cursor control. More accurate than a mouse. More responsive than a joystick.

TIRELESS PERFORMER

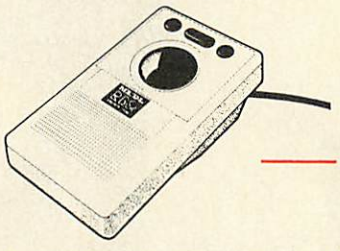

For precision, it runs rings around all alternatives. With 360° freedom, you can move in any direction at any speed with the minimum of effort.

HARD TO BEAT

A tough military pedigree and the Marconi name promises a prolonged lifetime of reliability.

TACKLES ANY APPLICATION

With 20 models, choose one tailored to your precise CAD/CAM, PC, ROBOTICS or control needs.

WXSAT

WEATHER SATELLITE STATION FOR THE BBC MICROCOMPUTER Model B, B+, Master 128, (Not Compact)

NEW

All you need for a high specification weather satellite receiving station based on the BBC microcomputer to receive, decode, display, print and save signals from the North American NOAA series of satellites as well as the Soviet meteor and COSMOS series. The system is upgradeable to receive geostationary satellites in the METEOSAT, GOES and GMS series with the addition of a downcoverter and suitable antenna. The complete package comprises:

- ★ Software on Disc and ROM
- ★ Test tape of satellite signals
- ★ Receiver Hardware Kit
- ★ PCB and parts kit for interface
- ★ MSR20 Mk VHF satellite receiver kit
- ★ MSA20 Antenna kit

SPECIAL INTRODUCTORY OFFER £139.95

MSS20 WXSAT COMPUTER INTERFACE AND SOFTWARE:

The interface comprises of a filter, demodulator and A-D coverter for the 2400 Hz satellite APT or WEFAX signal.
Internal and external crystal controlled synch. Manual framing and white and black level controls.

- ★ ROM software is 100% machine code
- ★ Accompanying utilities disc
- ★ x1 x2 x4 & x8 'Zoom'
- ★ Infra red and Visible light scales
- ★ User defined colour palettes
- ★ Any pass decoded in correct sense
- ★ Instant picture inversion
- ★ Fast scroll facility
- ★ NOAA/METEOSAT compatible
- ★ Full conversion gradient display
- ★ Text, lines & windows
- ★ On screen tuning facility
- ★ Pictures, pallettes save to disc
- ★ Printer dump supplied (Epson)
- ★ User print routine possible
- ★ Most features in 'real-time'
- ★ Routines accessible via "★ commands
- ★ Can be used independantly of WXSAT station

PRICE LIST

Complete Package	£139.95
Software & Interface kit	£59.95
PCB + software	£33.95
Test Tape	£4.95
MSR20 VHF receiver kit	£56.95
MSR20H receiver Hardware kit	£14.30
MSM20 s'meter kit	£8.95
Antenna	£24.95
MSK20 Preamp	£10.95

(All prices include VAT and P&P)

★ Available shortly. Please enquire ★
- ★ Hi-res tramestore
- ★ 'S' band converter, antenna, preamp for METEOSAT reception.
- ★ Fascimile transceive package for BBC

MSR20 RECEIVER

A high performance, dual conversion, VHF receiver designed to provide coverage of the 136-138MHz satellite band. Featuring:

- ★ Very low noise
- ★ Automatic, adjustable noise mute
- ★ Automatic recorder switching
- ★ Electronic crystal switching
- ★ Scanner facility (optional)
- ★ Signal strength and signal deviation metering (optional)
- ★ Suitable I.F. for 1.7GHz band

MSK20 137MHz PREAMP

Low noise for high definition pictures: Suitable for masthead operation. Kit includes necessary hardware.

MSA20 AERIAL KIT

Circularly polarised, X dipole antenna with reflectors, ideally suited to reception of polar orbiting satellites – can be supplied with integral preamp.

SERVICE BACK-UP

Although the equipment is quite complex it is presented in such a way as to be simple to construct. We will align, equipment and make good non-working units for nominal charge.

WXSAT PRODUCES SUPERB RESULTS – DON'T TAKE OUR WORD FOR IT, SEND THE DEMONSTRATION DISC (STATE 40/80 TRACK) ONLY £3 (FULLY REFUNDABLE)

Telex: 859489

Mini-Office II will perhaps be the most suitable. There are often problems using files from a particular wordprocessor with another desktop publishing package. Some DTP packages will not 'talk' to the most popular educational wordprocessors such as *Folio* and *Edword* but insist on *View* or *Wordwise* format files. That sort of mismatch stores up trouble when new staff trainees begin to find their feet.

More generally the format in which the school buys software is important. ROM-based packages are usually more powerful than those which are disc-based, but they cannot be easily moved between machines unless you use a cartridge system. So an important question to ask is 'Do I want this machine to be a dedicated wordprocessor?' Some packages, like *Typesetter!* from Sherston Software, allow you to prepare the micros on which you are going to operate the software using a master start-up disc. The work discs may be freely copied within the school and used on as many machines as necessary. In this way, one package can be used in several locations at the same time. Other tools are sometimes available in network versions, or site licences are available.

Equipped with a suite of inter-related tools, the IT co-ordinator can now look more specifically at cross-curricular work. The Government's programme is aimed at breaking away from the closed-door approach to education – each subject taught in isolation without any relation to eachother. Many people see the primary school topic-based approach as a useful model for change but others find this teaching scheme as too restrictive. For some the communications between the subject areas remain too artificial. For these reasons consultation and co-operation between school departments is essential. Beginning that co-operation requires an understanding of the personalities involved – there are no fixed guidelines! The IT co-ordinator will have to prove that everyday use of the computer for cross-curricular integration enables tasks and topics to be dealt with more effectively, more dynamically and in a fashion that is educationally justifiable. It is important that any new teaching style deals with the needs of the child and the syllabus.

Unless you can work effectively with the human resources at your disposal then it's not worth trying yet – you won't get a second chance with that set of staff. Although the IT co-ordinator can suggest ways forward, it always will be the individual teacher who must make his or her own microelectronic salvation! The new ESG trainers will be briefed with the latest information on software and hardware, and it will be the task of the trainees in schools to extract as much as they can during the short periods the trainers will be able to devote to individual teachers.

KEY QUESTIONS

- Which areas of the school will benefit most by the introduction of new technology immediately?
- Who are the key teachers with an enthusiasm for information technology who can transmit that to others?
- What is the best method of equipment distribution? A computer room? A school network system? A stand-alone machine for every classroom?
- What facilities will be needed for administering the micros?
- How will the software buying policy be decided, and by whom?
- What changes are likely to take place in the curriculum, teaching methods, classroom or school organisation if a cross-curricular approach is adopted?
- How sure are all staff concerned that the use of micros will enhance their own work, the pupils' experience or the practical results of their efforts?
- What is the best way to ensure the co-operation of all staff?
- Will a computer in the staff room encourage wider use?
- Is sufficient technical support available for the execution and maintenance of the computing plan?
- Will the school continuously evaluate the use of IT across the curriculum? How will it be monitored? By whom? Using what criteria?
- What results will be judged a success?

The actual planning of an IT policy for a school will, of course, come down to decisions and compromises made by the IT co-ordinator and the head and their deputies. It is not possible to have fixed policy that can fit into all schools. The best way to help is to suggest certain key questions which need to be asked if the right decisions are to be made. Although the list in the box on the left is not comprehensive it provides a starting point for discussion.

There are many more questions which arise either as a result of the questions or independently. The answers will not be the same in any two schools. Each plan will have to be tailor-made and it will need the careful use of every facility that is made available by any organisation that you can contact. Software companies, advisers, other staff, INSET courses, computer clubs and even the pupils themselves are sources of information which must be tapped to make your school IT scheme as effective as it can be.

The Microtechnology Report *is an MEP-sponsored document by Nick Evans. It is available from Resource, Exeter Road, Doncaster DN2 4PY, price £4.95.*

TEACHING OR LEARNING CDT?

Want a C.A.D. package specifically designed for educational use?

- For BBC B, B+ and Master, with disc drive and colour monitor. Package includes a 40 or 80 T Disc, a Teachers' Guide, Pupils' design sheet and a function key strip. 3-D CAD is easy to use and suitable for secondary school pupils in foundation or examination groups.
- 3-D CAD was written by a teacher, trialled in schools and designed for the typical situation of one computer shared between 15 or so pupils. The Teachers' Guide includes suggested design and follow-up activities.
- Designs are initially sketched on the specially prepared design sheets, away from the computer. When saved designs are automatically included in the Main Menu for display or alteration. A disc can store 24 designs at any one time.
- Design any object based on straight lines, from simple 3-D letters to buildings or other artifacts. Display wireframe views in orthographic (1st or 3rd angle), isometric, oblique, planometric or true perspective projections. Manipulate the perspective view directly using the function keys.
- Create a solid of rotation from a simple section, a prism from an end view or a mirror image when designing a symmetrical object.
- Two fully proportional screen dumps (small/fast and large/slower) are included for Espon compatible dot matrix printers.

A Unique Aid for Science Students

The Nuclides Data Base, a new computer package available from the U.K. Atomic Energy Authority, enables science students to explore some of the concepts at the heart of nuclear physics.

This unique educational aid has a large and rapidly accessible store of invaluable information on such topics as half life, binding energy and nuclear radius.

Designed by science teachers primarily for use by students in the 16-18 age group, the program should also be helpful in nuclear physics introductory courses at tertiary level.

Disk versions of the program are available for the BBC (including BBC Master 128), RM 480Z and RM Nimbus microcomputers. All versions are network compatible.

The package, which includes booklets for teacher and student, costs £12.50 inclusive of VAT and postage.

To obtain further information and an order form please use the coupon below.

Purchasers will receive a **FREE** copy of an A0 size (841 x 1189mm) chart of the nuclides.

To: **U.K. Atomic Energy Authority,** Room 119, 11 Charles II Street, London SW1Y 4QP.
Please send me information and an order form for the Nuclides Data Base.

THE NETWORK PAGE

Just how useful are courses on network management? Plus details of a DIN lead testing device

Robin Newman

Conferences and courses on network management are becoming more and more common, and can be very valuable sources of information and advice. This month the Network Page looks at one such conference to assess just how useful they can be. In addition, Chris Dawkins of Felstead School has designed a device for testing cables, and we describe it here. A school science department should be able to put it together easily.

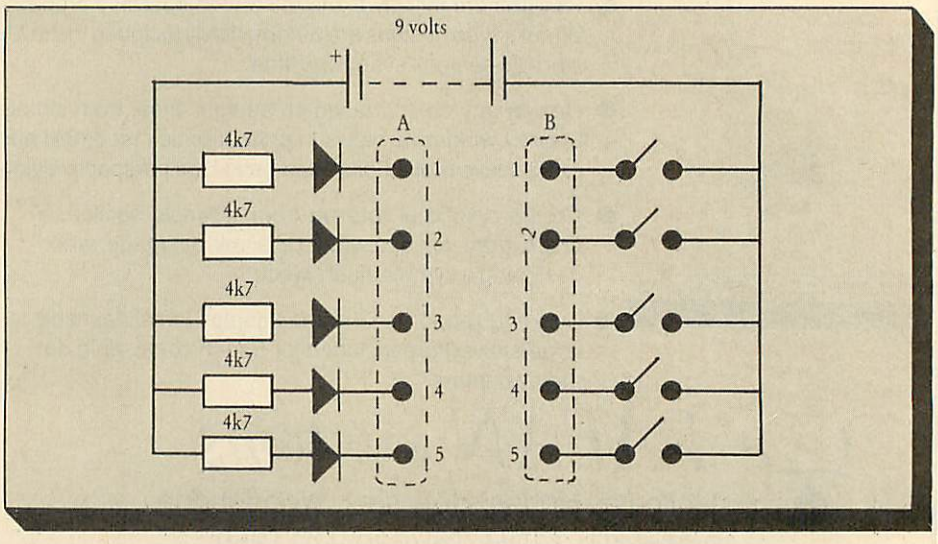

Manager's course

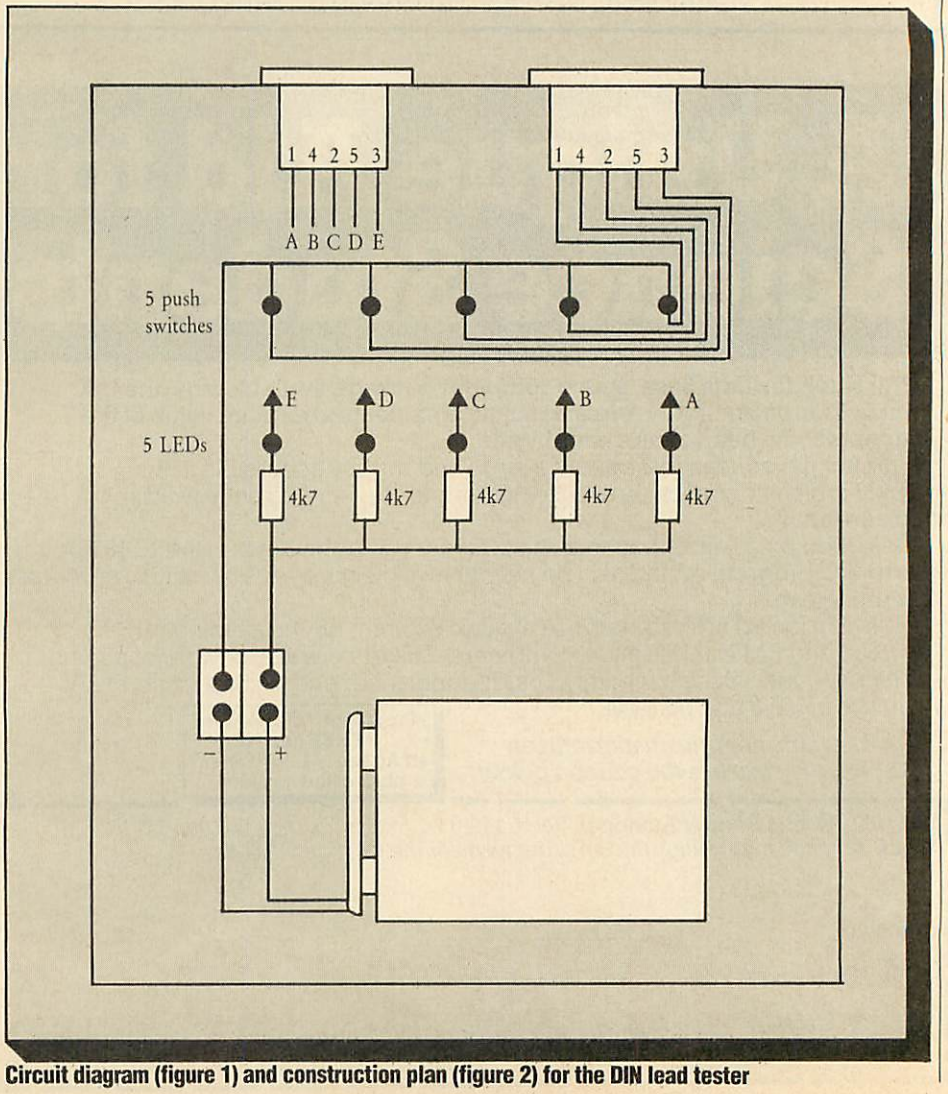

At the beginning of July, I took part in a course for Econet network managers organised by SJUG – the SJ Users Group – at Wellington College in Berkshire. There were three talks interspersed with workshop sessions where delegates could discuss their problems and try out some of the ideas discussed in the talks. The assembled expertise included Andrew Gordon of SJ Research, the author of their file server software. Several people had brought their file servers along and could illustrate their own file server structures, and some were able to solve any problems they had experienced then and there!

A lot of the discussion was specific to the SJ file server, which has a wider range of facilities than the Acorn level 3 version.

Directory structure

The first talk dealt with the network directory structure, the maintenance of the password file using the *Editpass* program, the operation of the library, and the space accounting system employed by SJ. This allocates a range of space accounts to each user and each is allocated, or credited, some space. Each directory within the root is also allocated to an account. In the simplest arrangement, each user has a unique account number, and his or her root directory will be allocated to the same number. The user will be able to save files in his or her directory, which will be subtracted or debited from the space allocated to the account. The file server manager can therefore control how much space each individual user has available. This system is

Circuit diagram (figure 1) and construction plan (figure 2) for the DIN lead tester

similar to the Acorn arrangement, where the utilities RDFREE and SETFREE control the space available.

The SJ system, however, is much more flexible. Suppose the network manager wishes users to be able to use a program which creates and uses a separate file of data. Clearly full access is needed to the data file, but the program itself should not be alterable by the user. The solution is to place the program in the same directory as the data file, one which the user owns, but to allocate the program to an account number which the user does not own and give the program public access. The account any individual program is allocated to can be changed with the *ACCOUNT ‹progname› ‹newaccount› command, eg, *ACCOUNT PROG 1 42. The user issuing this command has to own both the existing and the new account number – so it's best done by SYST.

In fact the situation is even more complicated. As well as its main account number – the one to which its space requirement is debited – each file also has an auxiliary account number. This can be displayed with *INFO, and it appears as the final item, enclosed in brackets.

The auxilliary account number can be set to an account owned by a different user, who will then have ownership rights over the file. Again the *ACCOUNT command can be used. The auxilliary account is normally zero. That's why the SYST user, who owns account 0, normally has ownership rights to all files.

Printers on the net

Many commercial Basic programs use VDU 2 and VDU 3 to switch the printer on and off repeatedly. On the network, however, this can produce disastrous results. These VDU codes are used to mark the beginning and end of a complete print job, and the network printer prints the contents of the banner file (the header identifying the user who asked for the printout) each and every time they are used. If the banner file includes a page eject, you get through an awful lot of paper.

One commercial program I recently converted to run on the network employed a machine code screen dump which sent VDU 2 and VDU 3 around every single byte sent to the printer. Graphics dumps turned out to be around 400k long! There is a solution to this problem: *FX3 switches the output stream like a set of railway points – so *FX3,0 allows output to both screen and printer, *FX3,4 outputs to the screen but not the printer, and *FX3,10 uses just the printer. You should still use VDU 2 before printing anything and VDU 3 after printing everything.

On Acorn and SJ FDFS file servers there can still be problems, as after VDU 2 the network printer cannot be used by anyone else until a VDU 3 is sent. Worse still, once you've used VDU 2, the printer server can time-out if you leave it idle for too long before sending VDU 3. The printer server moves on to deal with someone else, while your micro still believes it can print things. Usually you have to press Escape or Break to recover from this. These problems can be cured by modifying the program to send the output to a spool file, which can be printed out in one go later. This is done by inserting *SPOOL POUTFILE before the output starts, and *SPOOL when it has finished. The VDU 2 and VDU 3 commands should be removed. The file can be printed later like this:

```
VDU 2
* PRINT POUTFILE
VDU 3
```

If *PRINT isn't available on your machine, use *TYPE or *EXEC. This was discussed fully in Hints and Tips, *AU* October 1987.

Alastair Shimmin of Wellington College discussed the problems of doing graphics dumps over the network. The original NFS3.34 network chip contains a bug which prevents you from sending graphics dumps to the printer server. There are three solutions. Upgrade to an Acorn ANFS or DNFS chip, or an Oundle Extended Network Filing System chip. The ENFS or ANFS chips speed up using datafiles with BPUT and BGET. Alternatively, *VIEW the screen you wish to dump on a machine fitted with a local printer and graphics dump ROM, and dump it there. Alastair has developed a printer server program which is run on station 235 using the *Printmaster* ROM (the main SJ printer server is on 254). Using this program any user can type *NDUMP and the screen is automatically dumped on the printer connected to station 235. Another command, *GDUMP, enables text to be sent to station 235 to invoke *Printmaster* commands as if they had been typed at that machine.

The final talk dealt with a variety of topics including network security, using sideways RAM and converting existing disc and tape software to run on the network. The conference was interesting and hopefully it will be repeated next year.

A future Network Page will include details of how the new Archimedes machine behaves on the network, in particular its compatibility with existing network machines and software. Until then, please send in your comments so that good ideas can be shared with others!

Notes on the SJUG conference proceedings are available from SJUG, Microtechnology Centre, Wellington College, Crowthorne, Berks RG11 7PU. Price £1.50 (members) £2.00 (non-members). These include several Basic routines.

Oundle ENFS; further details from Robin Newman, Microelectronics Centre, Blackpot Lane, Oundle, Peterborough PE8 4AT Tel: (0832) 73884.

The circuit for the test equipment was developed by Chris Dawkins, working at Felstead School.

HOW DO YOU DO IT?

The Network Page would like to give network managers the chance to tell us how they use their Econet networks. Is your network used just for computer studies or IT teaching? Do you use it to support the teaching of other subjects? What software do you use? Do you run your network in an unusual or original way? Please write in to the Network Page, *Acorn User*, Redwood Publishing Ltd, 20-26 Brunswick Place, London N1 6DJ. Any good ideas will be passed on in a future issue.

DIN LEAD TESTER

This circuit allows you to test the DIN leads used to connect a computer to the Econet network. It is easy to build; the circuit diagram is shown in figure 1 and construction details in figure 2. To use the unit, plug the ends of the lead to be tested into the DIN sockets on the box. Then push each of the five buttons in turn. Each corresponding light emitting diode (LED) should light, indicating that the conductor in the lead is continuous and the plug connections are good. If the LED does not light then the lead has a break in it. If more than one LED shines at the same time, or the wrong LED glows, then two or more conductors are shorting together. The unit does not need an on/off switch, and the battery should last for a very long time. It is quick and easy to test any suspect lead, and it is also convenient to test all network leads regularly as preventative maintenance.

BANK MANAGER *for disc systems only*

The most advanced and versatile personal bank account management program available for all BBC computers. Consistently acclaimed!

"data entry is a delight. . . professional. . excellent product"
Micro User April 86

Enter cheques and receipts. Standing orders any frequency. Automatic date sequencing. Reconcile statements. Search, amend and delete. Unreconcile. Move forwards or backwards. Analyse expenditure. Forward cash flow forecast. Up to 36 simultaneous 'bank accounts' online simltaneously, inter-account transfers. 9999 standing orders. 99 analysis categories. 12 actual and 12 budgets per category, over 4,000 postings on an 80tk disc. Reports to screen or printer. Graphics. Foreign currency support. Password. File recovery. Auto exec file. Field editing. Itemised look ahead. Programmable report writer.

Standard Bank Manager for the BBC B, + £17.50

BANK MANAGER MASTER *for disc systems only*

Version 2 now available. Includes all of the facilities of the Standard Bank Manager plus ADFS file system support, shadow screens, uses sideways RAM, 40 or 80 column screen reports, improved graphics, m/c windows, function key support and onscreen labels, additional functions added to the already extensive report facilities.

Bank Manager Master for the MASTER and MASTER COMPACT £22.50
Bank Manager for the ARCHIMEDES (all models) £25.00. Phone for upgrade prices.

BANK MANAGER BUSINESS UTILITIES *for disc systems only*

For the 'professional' who also use the BANK MANAGER to control the business accounts the BUSINESS UTILITIES add double entry trial balance and programmable spreadsheet analysis reports. Generated from cheque and cash transactions keyed into BANK MANAGER. Just pass the reports to your accountant! Available for all Bank Manager versions, state which.

Bank Manager Business Utility Pack 1 £12.00

TYPING TUTOR

Quickly learn to touch type. Over 90 smoothly graded lessons graduate you from the basic home keys to complet keyboard mastery. Unique word scan line checking. Target WPM and percentage correct. You may revise the targets or lessons as required. Audio key click for positive key depression. Establish a typing rhythm using the automatic metronome. Free format option. Disc version includes several enhancements eg. on screen keyboard, exact mode, on screen parameters. Recommended.

Cassette £12.50, Disc for BBC B, B+, Master and Compact £12.50
Disc for Archimedes (all models) £15.00

the NIDD VALLEY ILLUSTRATOR

A versatile graphics package designed to complement the high quality of the Nidd Valley Mouse. You can produce graphics and text like these using just ILLUSTRATOR and DIGIMOUSE.

DESIGN YOUR OWN ICONS PATTERNS AND BRUSHES

The software not only has an extensive library of designs, but you can also create and edit your own to save and reload later.

SPECIAL EFFECTS

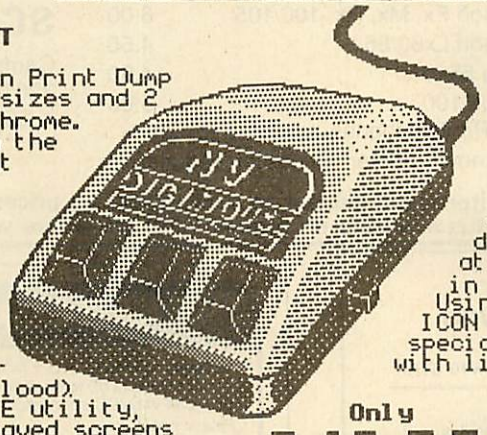

FLIP X or Y, ROTATE through 90, 180 or 270°, and using the HOLD option, shapes can be repeatedly drawn whilst rotating, creating hundreds of design possibilities.

HIGH QUALITY PRINTOUT

The high resolution Epson Print Dump gives you a choice of 4 sizes and 2 densities in crisp monochrome. WYSIWYG ! What you see on the screen is what you get at the printer - no loss of detail and no distortion. This very powerful print option is designed to allow illustrations to be incorporated with Word Processor text.

AND THERE'S MORE !.....

SPRAY and FILL (line & flood). Easy to use CUT and PASTE utility, plus GRAB and CUT from saved screens redrawn at a size of your choosing. A GRIDLOCK option allows you to place designs on an invisible grid. And its DISC BASED !!! NO ROM's to fit.

PULL DOWN WINDOWS

Drawing functions and utilities are selected from 8 pull down and 4 popup windows. These are obtained from two main menu and two file ICONS.

DRAWING OPTIONS

Every possible drawing option has been provided including LINE, MULTILINE, RAY, CIRCLE, ELIPSE, SECTOR, CURVE, and POLYGONS. These can all be rubber banded or enlarged/reduced. Shapes may also be drawn inverse or filled, with or without outline. TEXT can be entered in a choice of 2 styles and 3 sizes, plus you can design your own FONTS with the powerful ICON designer utility.

ZOOM and PIXEL EDITOR

Using the superb full screen zoom and scroll feature allows you to make fine detail corrections and designs one pixel at a time. The current pixel area is shown in an actual size , off screen window. Using this feature in conjunction with the ICON and GRIDLOCK enables icons, fonts and special shape designs to be generated quickly with little or no graphics experience.

Only **£49.90** complete with mouse

ILLUSTRATOR is packaged with the NIDD VALLEY DIGIMOUSE for the BBC MICRO A GREAT MATCH !

GRAPHIC SOFTWARE for CREATIVE DESIGNERS.

THE NIDD VALLEY MOUSE

This high quality, British mouse features a unique LINEAR LOCK which allows you to draw perfectly straight lines freehand, independently of the software.

The non-slip ball is held firmly in place and keeps in constant contact with your work surface. The mouse uses optical electronics, precision engineered to exacting standards.

Designed for comfort and long periods of effortless use, with an exceptionally smooth and accurate control.

ARTROOM/ACE SOFTWARE

Well-reviewed graphics design package from Clares, supplied on disc, with DIGIMOUSE, for the MASTER or COMPACT. Includes an extensive library of symbols, borders and pictures, zoom for detailed editing, reserve screen, selection of proportional fonts, and the full range of drawing options.

High resolution graphics and excellent print out quality. Supplied complete with 'ACE' Artroom Colour Extension.

Snapper King turns nasty!

We advertised some months ago that our Harold had broken 2000 on Snapper and that he was going for 3000. Well he is still some 800 short of the target - and he's not very pleased about it. If you visit our shop to see our wide range of BBC hardware and software, just don't mention anything about Snapper. Look at our printers, keyboards and books by all means, but remember, Harold keeps the hammer behind the counter!

DOUBLE PHANTOM?

YES! This IS the program demonstrated on BBC TV's "Micro Live". The Worlds first micro multi-user combat flight simulation is now available direct from DOCTOR SOFT via our 'HOT LINE' FIRST CLASS MAIL ORDER service.

DOUBLE PHANTOM is basically a TWO computer version of the highly acclaimed PHANTOM COMBAT simulation. At least one BBC must have a disc system. A hardware link (included) then links the machines which become separate aircraft sharing the same airspace, each VISIBLE and VULNERABLE to the other!

DOUBLE PHANTOM has all the usual PHANTOM features including the fastest and smoothest 3D colour graphics around (15fps). RAF Phantom pilot Paul Courtnage's verdict: "Marvellous... quite the best micro flight simulation I've ever seen... Totally captivating!"

Phone: Mail Order Hot line 0903 776000 with VISA/ACCESS. Mail: PO BOX 66, East Preston, West Sussex BN16 2TX. Most orders despatched SAME DAY, FIRST CLASS, POST FREE.

TubeLink

Advanced BASIC **for BBC B/B+/Master**

Tubelink is proud to offer the most powerful version of BASIC ever written for a 6502-based BBC micro. Advanced BASIC (formerly Archie BASIC) is a new version of BASIC, for the BBC micro models B/B+/Master with 6502 second processor or Turbo, and is compatible with Acorn's new Archimedes BASIC .

Just look at some of the features it has to offer ...

- Over 35 new keywords
- New program loop structures (CASE, WHILE, etc)
- Multi-line 'IF' statements
- New graphics commands (CIRCLE, ELLIPSE, etc)
- New error handling and TRACE debugging modes
- Instant on-screen help on keywords and status
- New statements and functions
- Mouse support (new MOUSE keyword)
- New string handling features
- INSTALL and LIBRARY commands for procedures
- Extended assembler
- Includes Acorn's very latest 1987 Hi-BASIC

Advanced BASIC can even be used to run Archimedes programs on your model B/B+/Master, or alternatively for writing programs which could be run on an Archimedes micro.

Advanced BASIC is supplied on disc for loading into a sideways RAM system, or on 16k EPROM, together with comprehensive user guide and 1987 Hi-BASIC on disc under license from Acorn. (To use extended graphics commands on B/B+ requires Acorn's GXR ROM. Mouse commands require suitable driver ROM, eg. Chauffeur or AMX Super ROM). State make and model of second processor in use. Full leaflet on request.

£29.95 on 40/80 track disc • £34.95 on 16k EPROM

Unique offer: Advanced BASIC and PMS B2P 65C02 second processor for just £115 - saving £15 on the normal RRP. Includes Advanced BASIC, second processor, instruction guides, and Tube Toolkit ROM. Add £5 if Advanced BASIC ROM version required. (B2P is only suitable for model B use.)

EXROM: The Extension ROM **for B/B+/Master**

Tubelink's EXROM effectively doubles the BBC micro's operating system adding many useful utilities, and featuring unique facilities if used with a second processor...

- Extended Osbyte/Osword calls • Filing system utilities
- Sideways ROM save/load • UNPLUG/*INSERT ROMs
- Full 65C02 disassembler • Memory management tools
- Tube on/off commands • Extended Hi-BASIC system
- Memory transfer functions • Suitable for DFS/ADFS/Net

£14.95 on disc for sideways RAM • £18.95 on 16k EPROM
When ordering, please say which version of Hi-BASIC you have

UTILRAM: The Utility RAM **for BBC B/B+/B+128**

At last a full emulation of the Master's configuration and Real-Time clock system is available for model B and B+ owners using Tubelink's Utility RAM. Supplied on 40/80 track disc for instant loading into a sideways RAM system. Excellent value at just £14.95 (includes comprehensive user-guide)

- Choose start-up mode, drive speed, default language etc
- Set-up screen interlace and DFS/ADFS preferences
- Extended Printer Buffer (upto 63k) and Epson screen dump
- Constantly updated Real-Time clock and calendar

Acorn's 1987 Hi-BASIC **for B/B+/Master**

Available under license from Acorn, Tubelink are able to supply the very latest version of Hi-BASIC which offers considerable speed and accuracy improvements over the previous versions. Compatible with 6502 second processor and Turbo co-processor, and supplied on 40/80 track disc for just £9.95.

UK Postage FREE on all items (Overseas please add £3).
FREE catalogue on request. Dealer enquiries welcome.
Access/Visa accepted. Phone 01-205 9393 (24hrs) for more info

The System utility from KM Software Ltd

Due to the pending release of custom utility chips we are reducing price of system to clear stocks.

Extra commands for BBC B & Master users, Master features include CMOS editor, CHARSET to move the character set into private ram, PVIEW private ram editor.

For the BBC B user it implements the MASTER rom handlers (INSERT/UNPLUG etc), disabled roms stay off even over a CTRL+BREAK.

Plus commands which can be used by both BBC B & MASTER, GPACK (powerful screen packer), Very powerful dissasembler (6502, 65C12, I/O, tube, lables etc.), memory editors, Down loader creator, Bad Program recover, Mode designer, Tube editors, Formatter, Verifier etc.

PRICE ~~£25.00~~ £17.50

Also available KM'S Sound to Light converter, This chip contains 10 different screens with an amazing 63 colours and responds instantly to sound input to the cassette port. Just play your favourite music and watch the colours and patterns flow.

PRICE ~~£12.50~~ £10.00

Send orders to: KM Software Ltd., 39 Clos des Ormes, Rue Verte, St. Lawrence, Jersey C.I.

Vine Micros Ltd - Special Christmas price cuts...Valid until 1st January 1988

For Tape to Disk Transfer... the REPLAY system can't be beaten.

Ever wanted to break free from the hassle of waiting for ages while tape programs load? If you have a disk drive then it's easy... just plug REPLAY in, connect a few wires (No soldering, very easy to fit connections - as our customers say), and you'll have installed a 'Magical piece of equipment' (quote from an A&B review) into your computer. It won't take you long to find out why....

REPLAY has established itself as THE BEST in tape to disk transfer... there's quite simply no competition. If you buy REPLAY and find that it won't transfer more programs than your present tape to disk program then we'll refund your money in full! And if you don't currently have such a program, then don't waste your money on anything else, but go straight to the top with REPLAY. REPLAY works by 'freezing' the computer and dumping the whole 32k of memory onto disk, ready for reloading to the point where you saved it.

Standard REPLAY features include : Very fast saving and loading of programs (about 7 seconds); Saving of programs at any point (eg. while playing a game); Screen dumping of games (printer dump routine needed); Program alterations such as infinite lives in games, etc. ; Saving of upto 22 files per disk (depending on DFS); Fully menu driven; Will even save some disk programs.

Extra Master version features : Saving from 32k to 128k of RAM (you specify how much); Completely invisible to other software ('clashes' are impossible); To date it will save ANYTHING loaded into the computer; Enables Master to B conversion kit to be fitted.

All REPLAY prices have been reduced for the Christmas period. *And don't forget our guarantee!*

BBC B and B+ versions of REPLAY now cost £28 all inclusive **(was £35) Save £7!** State your DFS type exactly.

Self contained REPLAY for Master computers now costs £35 all inclusive **(was £41.95) Save £6.95!**

REPLAY to fit on our ROMboard '3' for the Master now costs £27 all inclusive **(was £36.95) Save £9.95!**

>>>>> or Master REPLAY+ROMboard '3' for Master 128 all for only £39 all inclusive **Save £17.90 ! <<<<<**

Master to B conversion kit (allows most BBC B tapes to run on the Master) **£14.95** State Master REPLAY type. fitted

ADDCOMM ROM **only £23** all inclusive (was £28)

ROMboard '3' for Master 128, was £19.95, now £16

The first ROMboad ever to be produced for the Master computer, and by far the most popular. Its ease of installation and use makes it ideal for anyone who finds they need more ROM sockets in their Master. At its new price, who can resist it? Simply deselect the computer's built-in ROM software and plug in your own. Takes 3 ROMs including the Inter-series of ROMs by Computer Concepts.

ROMboard '4' for Master 128, was £29.95, now £25

This ROMboard allows up to 4 extra ROMs to be fitted inside the computer, replacing either the cartridges or the sideways RAM. The board also includes a read/write proctect switch. Ideal for those users who dislike cartidges but require extra ROM space, or for the school environment where cartridges tend to disappear.

Write Protect Switch for Master 128, now £7.95

Again, Vine Micros were the first with their device to write-protect either 2 or all 4 of the sideways RAM banks of the Master computer.

Vine Micros Ltd Special Christmas Prices.... Valid until 1st January 1988

Marshborough, Sandwich, Kent. CT13 0PG. *Telephone 0304-812276/368968* ACCESS/VISA accepted

COMPUTECK

Some Points of Interest

A business has to make a profit to survive and you, the customer provide that profit to keep that business trading. Out of that profit comes lots of costs and usually a large one is advertising. We at Computeck keep our advertisements small and running costs to a minimum, then we can pass these savings on to you by way of discounts, as much as 20% on some items.

At present we have 800 plus items on our lists of new and used hardware and software. We trade in software and hardware for new items. So send a SAE today for our up to the minute prices from an Archimedes to a Ram Chip we have it all – Minerva Systems, Pace, Computer Concepts, AMS, Beebug, ACP, Taxan, Vine Micros, etc. etc. We are also registered Acorn Dealers.

So if the above makes sense to you, buy from us and we will be able to pass on bigger and bigger savings to you.

Due to large stocks – 10 tape based games £12.95 + £1.50 p&p.

MICRO-TRADER

INTEGRATED SALES PURCHASE AND NOMINAL LEDGERS

Designed for business use by a business man programmer. "**Micro-Trader**" is a fully integrated program in which all *Sales and Purchase Ledger* transactions are automatically updated to the *Nominal Ledger*.

"**Micro-Trader**" offers full Sales and Purchase Ledger facilities including *SALES INVOICE and STATEMENT PRINTING* with a capacity of *450 accounts and 3000 transactions per month in each Ledger*.

Normal Income Expenditure, Assets, Liabilities & Journal Posting in the Nominal Ledger with full Reporting for individual accounts, Audit Trial, Trial Balance, Profit & Loss and Balance Sheet.

This suite is the only accounts package a real business needs to keep, maintain and finalise its accounts. If you are seriously in business consider how much time and money you spend and lose because you are not an accountant. You are a business man and so am I. You have a computer and so have I, all you now need is "**MICRO-TRADER**" to let you get on with running your business. I have already got it.

"**MICRO-STOCK**" would be an asset if you purchase goods in your business. It is a *Stock Control* program, fully integrated with "Micro-Trader". *4000 Stock Items with user defined codes. Invoice and Credit Notes and Cash Sale routine. Full Stock Held Reports.*

EXTENDED PAYROLL solves the wages problem. We have been supplying payroll programs since 1982, a year longer than anybody else for the BBC. People trust us.

Micro-Trader £200.00: Micro-Stock £75.00: Extended Payroll £49.95

Ring Colin Chatfield, *Fellow of the Institute of Analysts and Programmers*, for more information. He will be pleased to advise which, **if any**, of these programs you need.

To the Trade – If you are interested in selling the best business programs for the BBC you could do worse than ring us.

GUARANTEED WINS WITH FORM-FINDER!!

FORM-FINDER II for Football Pools/Fixed Odds:
Can be used all-year-round in any league, Australian, British, Vauxhall GM, etc. using information from the Fixtures Lists appearing in any daily paper. Forecasts Homes and Aways as well as Draws. Best Homes are displayed as Bankers, which have such a high accuracy rate, we **GUARANTEE WINS WITHIN SIX WEEKS**, when you use a selection of these in our suggested bet, if you are not in profit by then, return tape for immediate refund. Also included are routines to calculate all your winnings from this bet. This program requires no Up-Dating of Data whatsoever, the routines last virtually forever. Full betting instructions included.

If all this sounds to good to be true, please read what just one of our satisfied customers has to say .... **'I took faith and duly placed bets suggested (FIXED ODDS) and waited for the outcome. Well, I could hardly believe it was true, I had WON .... first time. Since then I have won almost every bet that I have placed, THANKS for a very good and accurate program at a very good price.' J.H.T. STAFFS.**
The original of this letter is within our files, copies giving the full name and address of the above client, have been submitted to the advertisers prior to publication.

FORM FINDER II Football Forecaster:- BBC/ELECTRON CASSETTE £15.00

Form-Finder for National Hunt/Flat Racing all-year-round forecasts.
Systems lasts virtualy forever, requires no Up-Dating. Will rate any race in seconds using the Racecard in your daily paper. Follow our Selection Guide for **Guarateed Winners!** If at any time you feel dissatisfied with this System for any reason whatsoever, return the tape for full refund. There are many Systems around, how many offer this guarantee?

Form-Finder Race Rating Program:- BBC/ELETRON CASSETTE £15.00

Form-Finder Bet Settler:
Calculates all returns due, Win or Each Way, within Patents, Yankees, Canadians, Heinz and Super Heinz bets. Plus any accumulator form 3 to 15 bets, useful for football coupons as well as racing.
Bet Settler BBC/ELECTRON CASSETTE £5.00

For orders by Mail only directly from:
Allan Data, 1 Lorn Road, Dunbeg, Connel, Argyll PA37 1QG.
All orders despatched by return.

Special pre-Xmas Bonus! Order both Form-Finder Programms.....

OXFORD PASCAL

BBC B
MASTER
ECONET

Oxford Pascal is the most popular full extended implimentation of PASCAL for Acorn machines.

"The code produced is very compact" Acorn User
"I can wholeheartedly recommend it to Pascal novices and experts alike" Computer Weekly.

The Oxford Pascal package contains

1) A Resident compiler. This compiler runs entirely in RAM and provides a very fast and convenient way to learn the language and debug programs. Using the resident compiler is like using a BASIC interpreter in that programs are ready to run in seconds.

2) A full disk to disk compiler producing relocatable object files. This compiler is capable of compiling very large programs (e.g. the compiler itself!)

3) The LINKER. This extension to standard Pascal allows you to break up programming tasks into small separately compilable files and then link them together into a single object module. Whenever you make a change to a file you need only compile that file and relink. Because you can work with short files you can use the resident compiler even for developing large programs.
The LINKER also allows the building of libraries.

4) The LOCATOR. This utility allows you to produce stand alone programs which run on any machine without the Pascal system.

Oxford Pascal allows many extensions to standard Pascal including:

- * program chaining
- * sound extensions
- * Bit manipulation
- * Random numbers
- * Machine code calls with parameters
- * Graphics (Move, draw, plot etc)
- * Hexadecimal numbers and I/O
- * Run time error trapping
- * String input
- * Clock access
- * Peek, Poke etc
- * AND MORE

ECONET USERS
Oxford Pascal is now available for the ECONET with BBC B or MASTER stations and is installed in numerous educational sites in the UK and Europe. Call us for details.

This month's special offer.

FRUSTRATED by spending too much time on trial-and-error strategies in adventure simulations?

DESPERATE for a logical structure to enhance problem-solving abilities?

INTERESTED in projecting literature-based activity through the use of the computer?

then you need

Dungeons of Gohk

A new, exciting adventure program developed for use in the classroom as a stimulus to literature-based activity, for eight to 12 year olds.

The Dungeons of Gohk was designed for children working in small groups to allow them to practise their problem-solving and decision-making skills in an enjoyable and logical environment.

The program is lavishly illustrated in Mode 7 graphics and packed with problems, puzzles and decisions, set in three chapters to help the organisation of groups and comes complete with a resources book giving a synopsis, suggestions, etc. etc.

Available on disk only at £12.50

Don't struggle with your keyboard, make it easy with

MICROTYPE

The ultimate typing tutor—now upgraded for the BBC

Recognised as the standard in typing tutors since it was introduced to microcomputers some three years ago, the Kansas Microtype has been still further improved and converted to the BBC Micro.

So you have a Beeb! Which means you, and most likely those around you are going to spend a fair bit of time at the keyboard. Not only now, but for many years to come, as computers are most certainly here to stay.

So why not master the keyboard now? Stop chugging away with just a few fingers and your eyes for ever on the keys —learn to touch type.

Microytpe will allow you to teach yourself, and will improve as you improve. Just a few short sessions and you will see results. Keep at it for say half an hour a day and you will be 'touch' typing within a week—with no need to have to look at the keys ever again! Keep at it, and speed will follow.

Apart from simple working instructions and a finger position chart, everythng is actually shown on the screen—-you don't have to wade through a printed course. You will be given the characters to type on the screen and will be shown which are being keyed in correctly and which are not.

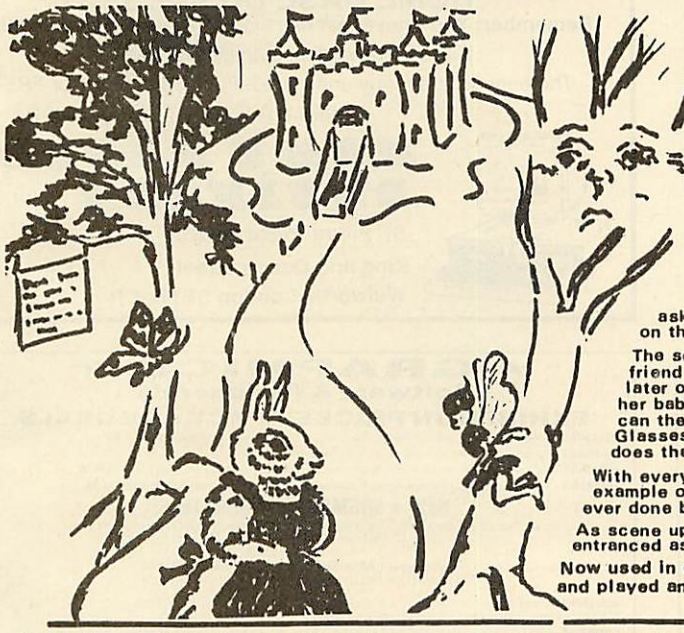

At the start you will be given the 'home' keys to practice, but unlike normal typing tutors, the computer can compute on which keys you are inaccurate or slow and so can give more practice on these keys, whilst replacing those on which you are proficient.

There is also the choice of either practice mode or paragraph mode. So once the program has given, and you have learned, most of the keys, paragraphs can be attempted.

There are ten short exercises in each lesson, with a complete alalysis of your performance at the end. This includes your average typing speed, accuracy and the keys mis-keyed. If the response time is set, the program will also show the keys on which the response time was exceeded.

Used by training officers and others by North Western Electricity Board; British Gas; British Telecom; British Petroleum; Post Office; National Coal Board; Esso; Boots; I.C.I and numerous colleges and schools, all wishing to master the art of touch typing.

New lower price £9.95 tape. £11.50 disk

For the children alone...

Magic Adventure

In Magic Adventure, Beth and David Guest have created a wonderland journey for children between four and eight.

Simple in operation, using the User Defined Keys, it nevertheless uses the BBC to its full with colourful pictures and wonderful story.

As the child brings up the locations, a simple question is asked, with the adventure proceeding in different way depending on the response.

The scenes include the Talking Tree—who played a nasty trick on a friend so was punished by the Fairy. But if the Talking Tree helps later on, all with be forgiven...Poor mother rabbit needs help to count her babies...Dare the Cage be opened...what is in the Grassy Field... can the King's Spell Jar be found...what is the real colour of the Glasses...will the fairies dance.....is the Castle locked...where does the Path lead...will the Fairy come...will there be a surprise...

With everything illustrated in colourful graphics, this is a delightful example of the programmers' art and refreshingly different from anything ever done before. Sound of course.

As scene upon scene enfolds, the children will be more and more entranced as they go on their Magic Adventure...

Now used in over 300 infant schools throughout the country, and played and loved by children everywhere.

£8.50 tape. £10 disk

Available by our famed return first class post service, with delivery tomorrow if you order by telephone by Access or Barclaycard before 4pm. With our lifetime guarantee meaning much more now that the cowboys are deserting the BBC fast!

WE ACCEPT EDUCATIONAL AUTHORITY ORDERS WITH IMMEDIATE DELIVERY WITH INVOICE

REAL-TIME CONTROL FOR THE BBC MICRO

Watch the SPIDER!
- Powerful new BASIC commands for invoking PROCs from the User Port, Serial Port or the Keyboard.
- 8 independent countdown timers.
- Easy to install with no soldering.
- Comprehensive manual supplied.

New SPIDER 2 features
- Special keywords for controlling the Serial Port.
- Professional implementation of Foreground/Background processing.
- Reaction timing and pulse trains accurate to 0.1 milliseconds!

from £65 including VAT

SPIDER 2 is a RAM/ROM combination which uses none of the BBC's memory, so BASIC programs are unaffected. The BBC B+ is fully supported and we supply a complete range of digital, analogue and serial interfaces for use with SPIDER using the 1MHz bus. Ask now for details.

SPIDER – stamps out I/O bugs

FAX•FILE ORGANISER

CALENDARS: week per page
month per page
ADDRESS BOOK
USER DEFINED FORMS

Combine the power of your BBC with the flexibility and convenience of a personal organiser (Filofax,Lefax etc) to create a personalised database. Using filofax-size computer paper or single sheets to:

- Print calendars including personal data (on disc file)
- Print Address-book pages, up to 48 entries sorted by name
- Print custom designed forms eg Class registers,accounts etc

The program (by Mike Williams, author of The Experimenters Rom and of BBCsoft's Electric Fields) is menu driven and very easy to use. It comes with full instructions and a pack of special size computer paper. (Extra paper can be purchased as required).

£9.95 inc p&p
80 track disc
sample pack of computer paper

MEWsoft
11 Cressy Road
London NW3 2HB

Also from MEWsoft – THE EXPERIMENTERS ROM £22 INC. P&P
"Very impressive, This Rom should prove invaluable to my teacher performing in experiments involving computer control or monitoring hardware. (School Scheme Review Sep. 1986)

BALANCE YOUR BOOKS

with

MICROLEDGER

A high quality general ledger package designed by a Chartered Accountant for maximum versatility and ease of use. Ideal for small businesses, clubs etc., as well as for home accounts. Runs on all BBC micros with 32k RAM or more. Features include:

- ☆ "Double-entry" accounting.
- ☆ Up to 99 general ledger accounts: all account names user-specified – can include VAT and sales/purchase ledger accounts.
- ☆ Up to 500 transactions per accounting period.
- ☆ Excellent budgeting facility.
- ☆ Reports include Income & Expenditure Account, Balance Sheet, Funds Flow Statement. Current period and year-to-date reporting with actual/budget comparisons. Full audit trail.
- ☆ Consolidation of two or more separate ledgers.
- ☆ Menu-driven with full prompt messages.
- ☆ Comprehensive, 30 page manual.

MicroLedger is supplied on 40 track 5¼" disk or on tape cassette for conversion to other disk media. Unrivalled value at £16.50 (incl. p&p) for disk or tape – specify which is required. Send cheque with order to Ixchel Software, 16 Meredyth Road, London SW13 0DY; or 'phone 01-876-9732 for a free fact sheet.

CommunITel

PROFESSIONAL VIEWDATA SYSTEM

CommunITel is an exciting professional viewdata system for the BBC B, Master & Compact Micros (DFS, ADFS or Network).

IT'S USES IN EDUCATION INCLUDE
Learning Information Technology
Structuring Creative Learning
Cross-Curricular Development
Administration/Publicity

The system includes a comprehensive suite of progreams which enables the creation of a database with message facilities. This can then be made available to callers using a telephone line and any viewdata terminal. The package includes comprehensive tutorial and reference manuals and a sample database.

Available in TWO LEVELS FOR USE WITH THE DTI (DaCom or Tandata) SCHOOLS MODEM

ADDER

THE NEW ADVANCED USER GUIDE
for BBC Master, Compact, B, B+, & Electron:

This is the authoritative guide on the Acorn BBC range of computers including the Master 128, Master Compact, BBC model B, model B plus and Electron. Following their original best - selling Advanced User Guide for the BBC micro, the authors have produced this thoroughly revised and updated book which replaces the old Advanced User Guide and provides users with an invaluable reference guide covering all aspects of the system hardware and software.

The New Advanced User Guide is carefully cross referenced and contains an extensive index and useful glossary. The 448 pages are wiro-bound for durability in use, and a wrap-around cover allows for easy identification in a bookshelf.

Adrian Dickens and Mark Holmes are both respected authorities on the BBC Micro and between them have extensive experience of using, programming, and writing about the BBC micro in all its forms. This book is liberally sprinkled with examples and ideas for extracting the most from this range of computers. No serious programmer of the Acorn BBC series can consider not owning a copy of this reference manual.

ISBN 0 947929 05 3
448 pages £19.95

Topics covered include:
- The BASIC assembler
- A full 65C02 reference section
- ALL the *FX/OSBYTE calls
- Implementing paged ROM software
- Using events, interrupts & buffers
- Programming the video circuitry
- Shadow RAM control
- Video and serial ULAs described
- Analogue port and Master Compact analogue emulator
- Using the Tube™ and second processors
- Master CMOS RAM/Real Time Clock
- Master Compact EEPROM
- Programming the 1770 disc controller

Example programs include:
- Expanded printer buffer paged ROM
- Rapid data transfer across the Tube™ paged ROM
- Using the real time clock alarm interrupt
- Reading IBM PC format discs using the 1770 disc controller

Hardware examples include:
- Constructing and using a light pen
- Using the cartridge interfaces
- Interfacing with the 1MHz bus and User port

VERSATILE CAD/CAM
For the BBC Micro

A sophisticated, menu driven, user friendly CAD/CAM package with many facilities for very accurate drawing construction and data extraction for Numeric Control (NC) post processing. As used in Education and Industry.

CAD System (EDUCAD) – £80 (ex. vat)

* geometric/schematic drawings
* zoom, scale and units control
* text/symbols, any size and angle
* mirror and duplicate
* generalised x-y plotter output
* area properties
* construction/modification
* text/symbol font editor
* intersects and tangents
* rubber banding
* graphics screen dump
* revision/material info. editor

CAM System (EDUCNC) – £35 (ex. vat)

* part geometry from EDUCAD
* tool path animation
* part profile definition
* generalised NC post processor

Econet Network versions available.

Both packages have explicit input prompts and error messages. This together with over 80 pages of online HELP data makes these systems easy to use and easy to learn – an ideal way of introducing this new technology.

TO ORDER simply specify disk format requirements or to obtain further details contact:

BeebDOS version 2 (new) from MicroBoss
Software for BBC and IBM file interchange

Runs on IBM-PC-XT-AT or compatibles and supports DOS 2.0 or later
Supplied on 360K IBM diskette with manual and plastic wallet the software includes:

BCOPY	Copy files BBC – IBM, IBM – BBC, BBC – BBC (wild cards allowed)
BCONV	Flexible IBM file translate facility enabling text to be passed between VIEW, WORDSTAR and Displaywrite 3 amongst other uses.
BGRAPH	Display BBC mode 0,1,4,5 screen format (AMX Art included) files on IBM standard colour (CGA), enhanced colour (EGA) or Hercules screens for use in IBM PC presentation, DTP, drawing and other graphic applications.

BeebDOS is almost a complete BBC DFS/ADFS for the IBM PC with utilities to catalogue, format, backup, delete, lock, unlock, compact rename, alter title & options, map free space, change and create directories of BBC diskette/files.

Infact BeebDOS is probably the fastest and most powerful BBC/IBM PC file transfer method available and no cables or serial connections are required.

£39.99 Inclusive

BBC double density diskette formats supported are Acorn ADFS, Watford, Solidisk, OPUS DDOS and UDM. Acorn single density DFS is only supported when running BeebDOS on an IBM AT or XT286 with a 360k disk drive. Please send or phone for an information sheet

This man is after your money

David Furlonger is Managing Director of Wordstream Limited.

In less than two years Wordstream has become the market leader of Bureau Typesetters, with 1,000 users using a unique method requiring no capital outlay and very low running costs.

We try very hard, we succeed nearly always and we accept the responsibility of one of the most critical aspects of our clients' work; the typesetting.

The reason is simple. We want your money.

CONSTRUCTION SOFTWARE

These programs are written by a Chartered Engineer and are particularly suitable for use in education on courses ranging from **BTEC** National Certificate to Degree level.

BEAMTUTOR – a comprehensive CAL package for drawing sheer force and bending moment diagrams. **£59.95**

PLANEFRAME – analysis of statically determinate pin jointed plane frameworks. **£79.95**

BEAMPROFILE – plots deflected form of a range of beam structures. **£39.95**

STEELBEAM – design of steel beams to BS 5950 Part I. **£89.95**

HOTWALL – plots structural and dewpoint temperature gradients for composite wall construction. **£39.95**

All programs are available on 40/80 track discs for BBC Model B and Master micros. Each price shown is all-inclusive for a disc form which font copies can be made. Econet version also available for the price of two discs. Orders and further information requests from:

QUESTION: WHAT SEARCHES 150 MAGAZINES IN UNDER 300 SECONDS?
ANSWER: THE MAGAZINE BIBLIOGRAPHY DATABASE

It contains details of nearly 21,000 references and includes every issue of ACORN USER, MICRO USER, A&B COMPUTING, EDUCATIONAL COMPUTING and BEEBUG e.g. articles, listings, reviews, hints, tips, corrections, news items and readers' letters — everything remotely related to the BBC Micro!

Choose any subject or keyword; the fast two-string search option (0.39 seconds per 10K) provides the title, description, source, page number and date of all occasions when it has been written about, on screen with global or selective copy.

Magazine reviewers have called it "the ultimate index", "a valuable asset that has tremendous possibilities", "outstanding", "unique" and a "remarkable product". B/B+/Master compatible.

MAGAZINE BIBLIOGRAPHY 1-16	**(Dec '81-April '87)**	**1,415K**	**£60**
ACORN USER 1-4	**(July '82-Dec '86)**	**394K**	**£20**
MICRO USER 1-3	**(March '83-July '86)**	**255K**	**£15**
A & B COMPUTING 1-3	**(May '83-May '87)**	**282K**	**£15**

Please specify number of tracks, sides and drives when ordering, or send large S.A.E. for full details. All prices inclusive of p+p + VAT.

Mc Hugh Enterprise,
43 Hookstone Oval,
Harrogate HG2 8QE.

TOOLKIT = The 54 command toolkit. **MODEL B £45**

+ BASIC edit, search, merge, join, part-save, overlay, relocate, up/download, verify, renumber, move line segments, relocate.
+ a rom/ram manager with load, save, on, off, send, clear, swap.
+ a complete filing system for use with sideways ram.
  BASIC and OS commands work normally. New commands provided.
+ dual catalogues, disc search, recovery, free space, menu wit auto-run (BASIC or MC), individual sector edit/load/save.
+ general utilities include memory/rom/ram editor/disassembler, softkey list/load/save/48 definitions, FX/vector list, etc.

RAMKIT = The sideways ram filing system.MASTER/MODEL B £35

+ utilise sideways ram for storing programs, data files, etc.
+ 15 channels. 31 files per ram, with programmable AUTO–! BOOT.
+ 27 extra commands include COPY, LOCK, TITLE, etc, plus ram/rom utilities, a 40/80 column memory/rom/ram editor/disassembler.
  Master RAMKIT is co-processor compatible and has CMOS utilities.
  Model B RAMKIT includes a full function rom manager.

CATKIT = The DFS disc indexer. **MASTER/MODEL B £20**

+ capable of storing up to 700+ catalogues (24000+ files) on one side of an 80 track disc. All data on files read automatically.
+ full sort/search/list/print/labels/MODE/OS access/utilities, plus built-in AND user-definable coding facilities.

PRINTKIT = The VIEW print pack (5.25" disc only) **MASTER £20**

+ quality printing using up to 84 fonts, 3 widths, plus underline.
+ disc pack contains 16 fonts, font editor, printer, preview, and screen drivers, plus extension driver for double height, etc.
+ uses single/double/quad bit image modes found on most printers.

BASKIT = The BASIC companion. **MASTER/MODEL B £20**

+ BASIC edit, search, merge, join, part-save, relocate, up/download verify, renumber, move line segments, various overlay options.
+ a FN/PROC library editor. Use FN/PROCs either as overlays or as program building-blocks. Supplied with a starter disc containing over 50k of FN/PROCs, including BASIC linker, utilities, etc.
+ fully co-processor compatible.

ROMKIT = The rom manager. **MASTER/MODEL B £15**

+ on, off, load, save, list, CRC, send, swap, service call info, direct *INSERT/*UNPLUG, memory/ram/rom editor/disassembler.
+ 12 new *CONFIGUREs include CMOS edit/load/save, a VIEW printer driver, softkey and soft character load/save, etc.

CHARKIT = The on-screen character designer. **MASTER £10**

+ 15 stylish fonts (characters 32-126) built-in.
+ facilities to design/edit/load/save/use new fonts, plus complete or partial redefinition, double height, double width, etc.
+ VIEW printer driver to print using the built-in or user fonts.

Available as 16k EPROMs or rom images (on a dual format DFS disc), supplied with detailed manual. Cheques with order, or write for detailed fax sheet:

JML Software, UNIT 5, St Catherine's Mill, LEEDS, LS13 2TD.

SIDEWAYS RAM

BRAINSOFTS 32K STILL THE BEST VALUE SIDEWAYS RAM FOR THE BBC RANGE.

*Uses latest technology.
*32K of ram in a size no larger than a EPROM.
*No soldering required the two leads clip on.
*Takes up only one sideways rom socket.
*Does not use user port but uses &FE30 register.
*Low power consumption.

Incompatible with rom boards except Peartree MR3000.

BRAINSOFTS 16K COMPATIBLE WITH MOST ROM BOARDS.

This module has been tested with the following boards:- ATPL, Watford, and Peartree MR3000.

BRAINSOFTS BATTERY BACKUP UNIT.

A 28pin 0.6inch wide socket with a built in CMOS controller and a embedded lithium battery. It monitors the supply for disruption when such occurs the batttery is switched on.

All the above are guaranteed for 1 yr. Please state computer.

SOFTWARE

SIDEWAYS RAM UTILITIES

Now Version 3 with ARFS and APB !!

-MENU DRIVEN SOFTWARE this selects RAMLOAD, RAMSAVE, RAMLIST, PRINTER BUFFER, or PROGRAMMERS UTILITIES.

-ADVANCED PRINTER BUFFER provides the user with up to an extra 63K of buffer space, which allows the user to continue using WORDWISE-PLUS, VIEW or BASIC whilst the printer is printing.

-PROGRAMMERS UTILITIES are a collection of 25 utilities including a full-screen-memory editor, all variables clear, program relocation, program compaction, program repairer, rom list, rom enable, rom disable, rom status, speed control, computer status, string search, variable list, vector list, close all files, list of the currently active variables, keyload, keysave, program comparison with a file held on disk, rom save, and screen compaction/uncompaction which can pack a mode 0 screen in less than 1K of disk space.

-ADVANCED ROM FILING SYSTEM provides the user with fast access to programs and data, so fast that it can load a 20K program quicker than the BBC's CLS command takes to clear the memory. The ARFS is capable of storing files longer than 32K in length, the amount of file space is limited to the number of sideways ram the user has, the number of files, length of names being limited by only the ram size. The ARFS when enabled by *RFS acts like a disk interface allowing saves and deletions, as well as loading, many programs which use 'legal' disk calls are compatible.

Also provided on the disk are three BASIC programs which can be easily adapted to run on NETWORK systems, ramload, ramsave and ramlist.

Provided with the sideways ram utilities is a 12 page instruction book, the software is supplied on a 40T disk with 80T conversion software.

BBC TO ARCHIMEDES DISK CONVERSION KIT
BBC DFS TO ARCHIMEDES ADFS

Comprising of 3.5 and a 5.25 inch disk with a connection lead for connecting the BBC and ARCHIMEDES together. Requires a BBC series computer and a Archimedes, menu driven software. Available Sep 87.

COMPUTER MUSIC

BECOME A REAL PERFORMER THIS CHRISTMAS!

With the MIDITRACK PERFORMER, you'll make better music than you believed possible! Whether you imagine yourself to be a Madonna or a Mozart, you can record your favourite hits using your home computer. The PERFORMER, with its innovative features, gives you full micro control of your music so that everything you play is exactly reproduced – or even improved with auto-timing in operation! You'll have up to 29 tracks of recorded music and enough time to create an exciting rock piece or classical composition, with wide tempo variation for getting those fast passages right, easy note correction with punch-in, instant transposition of individual tracks, auto control of drums and unlimited notes at once on a track.
In fact, you could have a final performance that's as brilliant as you imagine when using one or more of the superb Midi instruments now available. The PERFORMER is being used by everyone from young musicians in schools to top recording artists with home studios like Keith Winter (Shakatak) and Phil Fearon.

All you need to get started is a Midi-equipped instrument – usually a portable keyboard – a BBC micro (B, B+, Master or Compact) plus suitable TV and disk drive. We'll supply the EMR MIDI INTERFACE unit and 2 CABLES to link your instrument to your micro and the MIDITRACK PERFORMER software program on disk for £99 inc VAT. Please add £2 post & packing. (State 40 or 80 Track disc and micro type). VISA & ACCESS telephone orders accepted.
Write or phone for full information on the PERFORMER and other programs in the MIDITRACK MUSIC SYSTEM plus free advice on Midi instruments.

FOR ONLY £99!

(Bumper Xmas Offer Saving £30 on RRP)

IEEE488 INTERFACE PODULES FOR THE ACORN ARCHIMEDES AND SPRINGBOARD COMPUTER SYSTEMS

The combination of Acorn 32-bit RISC Technology and Intelligent Interfaces hardware and software design results in an extremely fast and powerful IEEE488 Interface Controller for ATE (Automatic Test Equipment) systems.

- Full implementation of IEEE Std 488.
- Enables the computer to communicate with up to 14 IEEE488 interface compatible instruments
- Extremely fast data transfer rate (around 250 Kbyte/s)
- Can be configured as the system controller or as a simple talker/listener
- As controller in charge can send all addressed and universal commands and conduct both serial and parallel polls
- Ultra high level software interface for ease of use BBC BASIC Procedures and Functions supplied on disc optional libraries of procedures for FORTRAN 77, ISO Pascal, C etc
- Comprehensive user guide

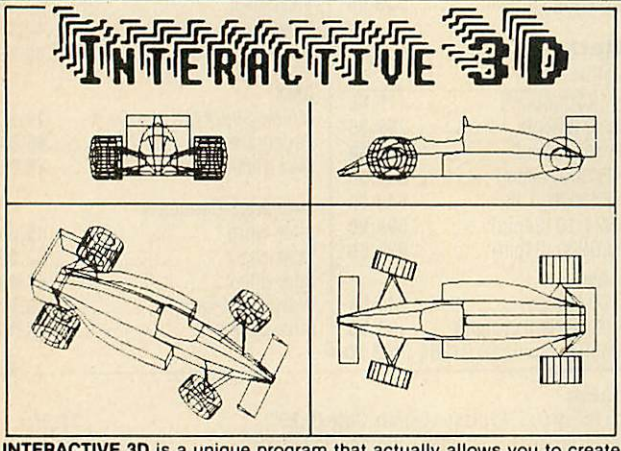

Intelligent Interfaces supply IEEE488 Interface Controllers based on the Acorn Archimedes or the Compaq Deskpro Computer Systems. They designed, developed, manufacture and support the Acorn IEEE488 Interface for the BBC Models B, B+ and Master 128 Microcomputers.

Officially appointed Acorn Scientific Dealer.

INTERACTIVE 3D

INTERACTIVE 3D is a unique program that actually allows you to create a design directly in a 3D view. And you can zoom, rotate and change view at any time to visualise the effect of design changes. Full editing facilities allow you to create and delete points and lines, and adjust their positions in any direction, all under cursor control without having to enter any numerical data. Circles can be generated automatically and symmetrical forms can be created by reflections. Designs can be saved to tape/disc and reloaded. Views shown on the screen can be saved or printed. Altogether, nearly 50 operations are included.
For BBC B, B+ and MASTER series.

* Acclaimed in reviews (Micro User, Beebug, A&B etc)
* Widely used in schools, colleges and industry
* Licenced to Education Authorities
* Sold in nearly 20 different countries worldwide
* Probably the most powerful 3D CAD system for any home micro, and at an unbelievably low price

£8.95 cassette £12.95 disc (state 40 or 80 track)

Ampthill,
Bedford MK45 2QX

MODE-ØØ DUMP

640 X 512

RESOLUTION BREAKTHROUGH!

The BBC computers have quite high resolution graphics. The maximum horizontal resolution of 640 is good but the overall effect is spoilt by the mediocre vertical resolution of 256, even in MODE O. The same limitation applies to normal screen dumps, so the only way to obtain smooth curves has been an expensive plotter.
Nothing can be done about the screen resolution, but now our unique software, MODE-ØØ DUMP, provides a means of outputting graphics to a dot-matrix printer at an amazing 640 x 512 resolution. All you have to do is add two simple *SPOOL statements to your BASIC or machine code program. All the VDU data used to plot the picture are then saved to disc for use later by MODE-ØØ DUMP. Your program can run in any MODE - even MODE 7! (although then you won't see the results until you run MODE-ØØ DUMP). The dump is in one colour (i.e. as MODE O) and covers most of an A4 page.
A useful graph plotting program is included as an example to show you how to add the *SPOOL statements to your own programs.
MODE-ØØ DUMP for BBC B, B+ and Master computers on 5¼" disc.

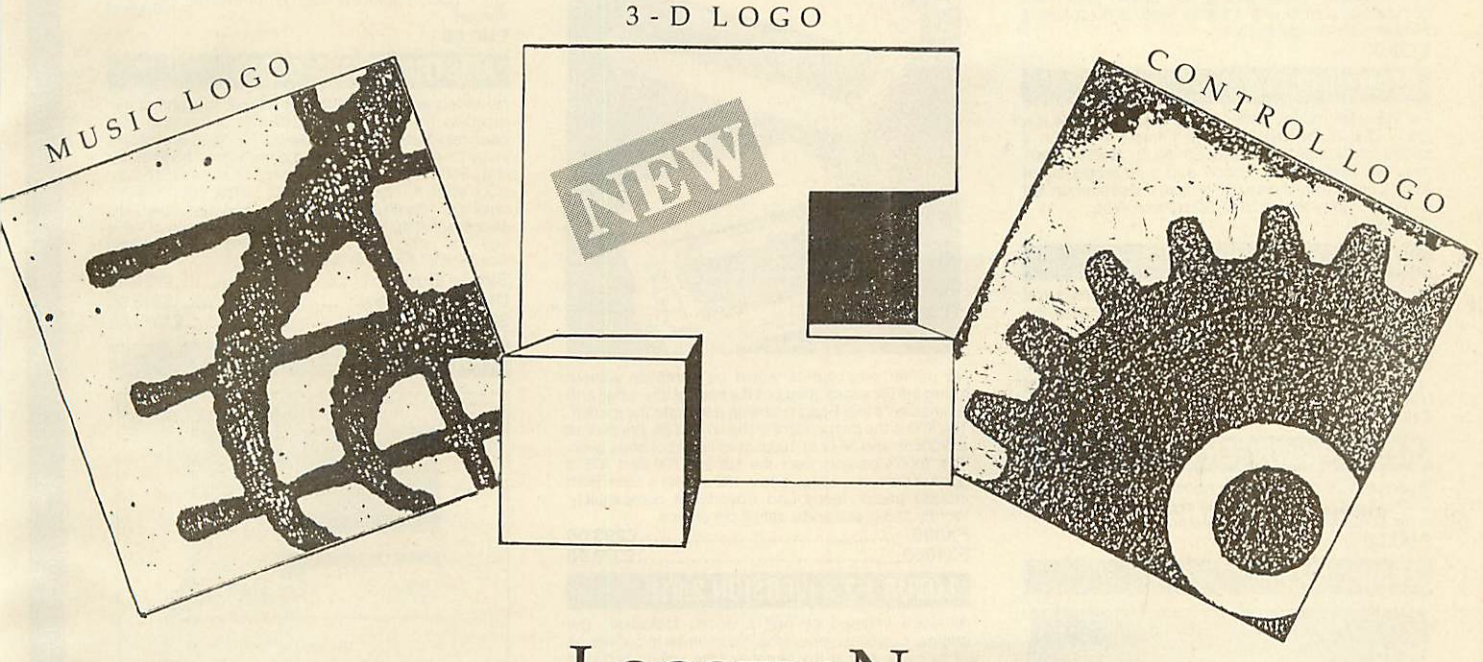

£12.95 disc only (state 40 or 80 track)

Please note: MODE-ØØ DUMP works with most dot-matrix printers, but if ESC"*" is not available (check your printer manual) then you have to omit from the dump 6% of the screen height (either top or bottom).

SPECIAL OFFER: (40 or 80 track disc only)
INTERACTIVE 3D + MODE-ØØ DUMP £20.00

You can save INTERACTIVE 3D pictures to use with MODE-ØØ DUMP

'SEASONS GREETINGS FROM ALL AT COMPUTER EXPRESS'

PANASONIC 1081

This 120cps draft/30cps NLQ little beast is a surprising winner. It continues to sell very well, no doubt helped by the fact that everybody discounts it so massively! But it has excellent 9-pin quality, is Epson and IBM compatible, comes with a tractor feed, is 80 columns wide and amazingly cheap!

£139.00

STAR NL10

For value for money nothing can match our new low price. One of the most popular printers ever with a speed of 120cps draft and 35 NLQ. Built-in back mounted tractor feed, friction and auto single sheet feed. Comes with choice of interfaces. Recommended by Which? Very strong NLQ, 80 column wide.

£178.00

EPSON LX800

Although previous LX series printers were considered under-specified compared to the NL10 and others, the range continues to be the best seller – ever. This latest offering zips along at 150cps draft and 25cps NLQ and comes with Parallel Esc-P or IBM Parallel interfaces as standard, plus a top-mounted tractor feed. Good, clear typeface, 80 column wide.

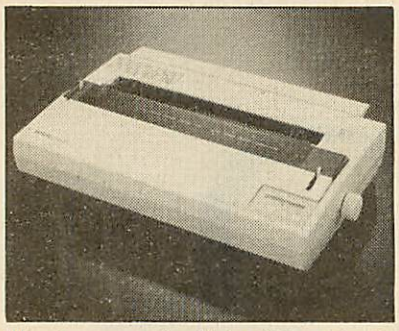

£189.00

NEC P7 PINWRITER

Heavy duty 24-pin dot-matrix prints draft at 180cps and Letter Quality (LQ) at 72cps. A very successful product in the corporate sector. 132 column.

£441.00

EPSON LQ2500

Although very expensive, this fast (270cps, 72cps LQ) printer continues to sell in impressive numbers even in the face of strong competition in a fiercely contested market segment. Probably the best printer Epson ever made. 132 column.

£689.00

MIGENT ABILITY

A knock-down integrated system. We recommend it because it does spreadsheet, WP, Database and Comms professionally. For the budget user there is nothing to match it at this price. Great if you are learning.

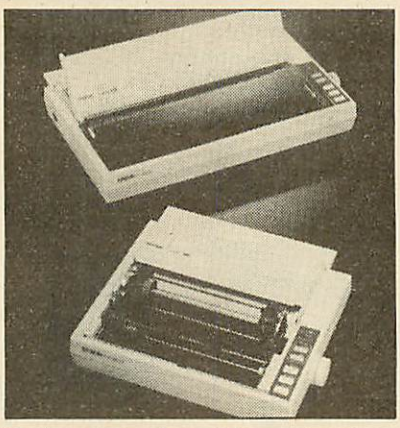

£40.00

MIRACLE WS4000 V21/V23 Modem

This is the most popular Modem in the country today. Why? Mainly because it is cheap, reliable, looks good and does the job, which is really quite a simple one, after all. You can use it to access Telecom Gold, One-to-One, EasyLink, Prestel and all the bulletin boards that keep sprouting up. You also need a serial cable (£15.00) and software. We recommend Sagesoft ChitChat (£71.00) because that package also allows you to access Prestel. Most others don't.

£129.00

EPSON FX800/1000

No printer propaganda would be complete without listing the FX series. It was on the back of this range and its ancestors that Epson came to dominate the market. The 800 is the descendent of the 80 and 85, prints draft at 200cps and NLQ at 40cps and is 80 columns wide. The 1000's parents were the famous 100 and 105. It goes at the same speed and is 132 columns wide. Both include tractor feeds and Epson/IBM compatibility. Worthy pedigrees and a safe 9-pin choice.

FX800.....£293.00
FX1000.....£379.00

LOTUS 1-2-3 (VERSION 2.01)

Although imitated by half a dozen lookalikes, the original business spreadsheet continues to out-sell all of its rivals and is the Number One selling software package – ever. Very popular with corporates and government. Our huge volumes enable us to offer it at an exceptionally low price.

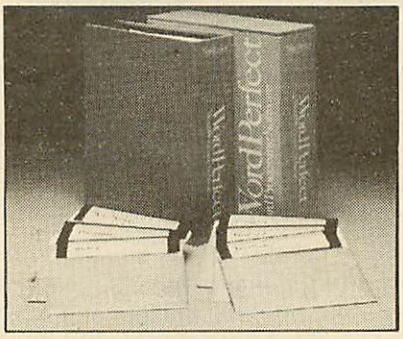

£220.00

XEROX VENTURA DESK TOP PUBLISHER (VERSION 1.1)

Rightly or wrongly, Desk Top Publishing (DTP) is the latest industry buzzword. There are a lot of packages about, but the general consensus is that this is the best. It's in fashion.

£465.00

WORD PERFECT (VERSION 4.2)

Statistics show that more Word Processing software is sold than any other kind. Word Perfect is the best selling WP package in the world today – full stop. It is also, in the view of most trade people, the best. Strongly recommended. In software terms, only Lotus outsells it.

£219.00

SUPERCALC 4

If you want an alternative to Lotus 1-2-3 *and its clones*, this is the only one worth considering. They say it is everything Lotus should have been. Easy to use and quick, good graphics, it may be number two, but it tries harder!

£191.00

AMSTRAD 1640 – ECD

No listing would be complete without mention of this machine. Some of the shortcomings of the 1512 have been rectified, mainly the display. The 1640 is excellent value for money, coming as it does with an 8086 8MHz chip, 640k RAM, mouse, Gem, MS-DOS and full colour EGA screen. The old 1512 was selling 7000 to 9000 units per month in this country, and we expect the successor 1640 to have similar success. For real value buy the single drive version and add a 32mb Scribecard! Available in colour only.

Single Floppy.....£720.00
Double Floppy.....£815.00
20mb Hard Disk.....£1075.00

TANDON TARGET

This small-footprint mini-AT is about the most stylish around. Fast 20 or 40mb hard disk, 1.2mb floppy, 1mb RAM, serial and parallel ports, 14in mono monitor, keyboard, MS-DOS 3.2. Good price for a pedigree AT.

Target 20.....£1499.00
Target 40.....£1699.00

EPSON PC-AX

This 10MHz AT is robust and sets the standard for big-box design and style. Comes with keyboard and MS-DOS, you need to pay extra for the monitor and graphics adaptor board. This is a popular item for power users on a budget, such as local authorities!

AX20 Mark II.....£1259.00
AX40.....£1629.00
AX60.....£2359.00

MINISCRIBE 32MB HARD DISK CARD

This Scribecard is revolutionizing hard disk upgrades in the U.S. and U.K. Why? Because it's cheap! It is also easy to install, reasonably fast (65ms) and readily available. Takes up one and a half slots and works great in the Amstrad, IBM, Olivetti. You name it.

£289.00

SMART SYSTEM

The trouble with integrated packages is that they tend to do one thing at most very well, and all the others not so well as a dedicated package. Smart is the only integrated system in which all of its components (WP, Spreadsheet, Database, Graphics, Communications, Diary) are competent to stand on their own against the competition. The best-selling integrated package.

£349.00

All goods guaranteed. Official Purchase Orders accepted from Government, Local Authorities, Universities and PLC's. All prices exclusive of VAT and subject to change without notice. Delivery charges extra. No returns or repairs accepted without Returns Authorisation Number which has been given by our Technical Support Department. Defective dead-on-arrival merchandise repaired or replaced immediately at our carriage expense. Carriage on warranty repairs is paid by the customer. Non-defective credit returns subject to a 10% restocking fee. Technical support available Monday to Friday. Export and trade enquiries welcome.

128K EPROM PROGRAMMER

Again a quality-built product, cased in steel two tone case and comes complete with software in ROM, ZIF socket and all cables. This is the follower of the well proven 64K Micron Plus EPROM Programmer.

THE SPECIFICATION

★ Programme 2716, 2732, 2764, 27128, 27256, 2532, 2564, 27512, 27513, 2516, 27011, 2732A, 2764 etc.
★ Programs all EPROMS up to 27512 (64K) in a single pass (master only).
★ Programs all EPROMS up to 32K in a single pass (BBC B).
★ Fully buffered
★ Software selectable programming voltage 12.5/21/25 volt
★ Normal or high speed algorithmic method of programming (software selectable).
★ Continuous display of option selected.
★ ZIF socket powered down when not in operation.
★ Mains derived self contained power supply.
★ VCC is raised to 6V during programming in line with manufacturers' recommendations.

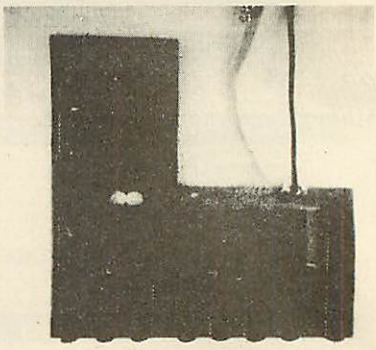

SOFTWARE ON ROM INCLUDES

★ Fully menu driven
★ Automatic verification on completion of programming and fault listing.
★ Built in full screen memory editor (buffer is 32K long).
★ Software allows blank check or EPROM and automatically lists faults.
★ Will copy EPROMS to buffer or file.
★ Will generate checksum.
★ BBC format ROM images may be created using a number of images of basic or machine code programs.
★ More than one image can be stored on one ROM.

This programmer has been designed and manufactured by H.C.R. Electronics to industry standard. Our engineers are on hand for queries relating to this product.

Price only £68.00 + £10.20 VAT + £3.00 P&P.

16 SOCKET ROM/RAM EXTENSION BOARD
+ 32K PLUG IN RAM CARD

Fully buffered the board offers the following features:

All 16 sockets may contain 8K or 16K roms.

Up to two pairs of sockets may be configured to accept 8K eproms to simulate a 16K eprom without the expense of a 27128.

Up to 16K of CMOS RAM type 6116LP (made up of 8 2K ram chips) may be fitted to 8 of the available sockets leaving 6 free for roms.

or 2 8K Ram chips (6264) leaving 14 available sockets.

The advantage of sideways ram is twofold:

1. Programs can be assembled directly to hex 8000 and debugged before being committed to eprom.
2. Programs intended for sideways roms may be stored on disc and downloaded into ram. Many more programs may be kept on disc allowing the extension board to be fitted only with roms that need to be resident.

This is a high quality PTH board and plugs into the extreme right hand rom socket.

4 wires to the paging register and one lead to the R/W line have to be connected.

BATTERY BACK-UP FACILITY
Separate power leads for the board

are used to eliminate possible crashes that may occur due to trying to draw up to 650mA from a sideways rom socket.

Board fully assembled and tested complete with full installation and operating instructions.

Cost £32.00 + VAT, £1.00 P&P
Also available: 32K plug in RAM card. Will fit directly into ROM socket on above board.

EXTERNAL EPROM EXPANSION FOR BBC MODEL B + MASTER

'Master' EPROM Expansion

The expansion unit will hold up to 12 ROM's. The ROM's may be 8K, 16K or 64K. The unit is plugged into the 'Master' cartridge socket via a cable and adaptor. The ROM's are selected as 3 banks of 4 ROM's. Each bank can contain up to 16, 16K ROM images, if 27512 EPROM's are used. In addition, 16K bytes of battery backed up RAM can be fitted, this RAM can be read and write protected.

1 CARD SYSTEM £68 + £3 p&p + VAT
ADDITIONAL CARD SYSTEM £20 + £1 p&p + VAT

BBC Model 'B' EPROM Expansion

The expansion box will hold 12 ROM's as standard and 24 in total with the addition of the second board. The ROM's may be 8K or 16K. The unit is connected via one of the internal ROM sockets and a buffer board, no soldering is required to fit the unit. When a box with expansion board is fitted each card of 12 ROM's exist in the sideways ROM area, and are addressable at any time. Switching between the cards is software controlled. Up to 64K of battery backed RAM (32K per card) can be fitted. This memory can be read and write protected. Both units are mains powered.

1 CARD SYSTEM £75 + £3 p&p + VAT
ADDITIONAL CARD SYSTEM £29 + £1 p&p + VAT

Plotter, Linear Graphics A4 plus Linscan, both as new. Best offer secures. Tel: (0662) 3597) After 6pm.

FREE PERSONAL AD SERVICE

Fill in the form below to a maximum of 20 words (one in each box) and send it to *Acorn User* Free Ads, 20-26 Brunswick Place, London N1 6DJ. Please use capital letters, write clearly, and remember your name, address and telephone number. Without this full information, supplied on a separate sheet of paper, we regret we cannot carry your Free Ad. We cannot accept entries selling or swapping software. This is a service to readers – no companies please. One entry per form only. Free Ads are carried in the magazine as space permits, and any Free Ads not used within a month of receipt will be disposed of.

Bogs betwixt Bell and Ben

Big Ed Quinn and tech man Bell set out bright and early for this year's annual Big Ben Show in Holland, land of windmills and telefoons. But despite allowing two whole days to get there, chauffeur Quinn had problems – Bell kept navigating the Reliant Robin towards Utrecht.

After being beaten into submission with a bunch of tulips, Bell revealed that he really wanted to go to an international bog conference being held that very weekend. Yes, Mr Bell is really into those wet sludgy places, having been an ecologist before being reincarnated as a wirehead!

Turnout for the show was good. Acorn's brand new Dutch distributor was there with almost six Archimedes. This included almost three A440s – we didn't think Acorn had that many.

The Dutch are hoping for big things in the university sector, with Delft producing the teletext package *Acom* (née *Poseidon*). There were even rumours of a public domain Unix system.

The main event of the show was rival magazine *A&B Computing*. The discerning Dutch weren't very impressed. At a loss for something to do, *A&B* eventually left their hotel early and slunk back to England in their 2CV. As Ed Mark Webb explained: 'We couldn't sell a single copy.' Not surprising given the up-to-the-minute news in their November issue.

September 30th to October 1st
Leicester University

Up-to-the-minute news from *A&B*, published October 2

Arthur needs a minder

Some Archimedes 440s have been seen running Arthur 1.1 and carrying a prominent sticker with a warning message to the effect that it could destroy files by accident all on its own! However, the earlier Arthur 0.3 had no such warning. Is the Archimedes ADFS afflicted with the 'Master 128 DFS syndrome', where each successive new version carries more bugs than the last?

What a card

Minerva's add-on card index application for *InterBase* users has put the cat among the pigeons. Computer Concepts *will* be selling rival Minerva's software – but they won't be advertising the fact, says CC's Rob Pickering. Seemingly, it's too close to an admission that the card index supplied with *InterBase* is useless.

But wait! Computer Concepts are reportedly reacting to harsh criticism, and hurrying to rewrite both the manual and their own card index.

1 Across. Attitude of Acorn Computers (anag)

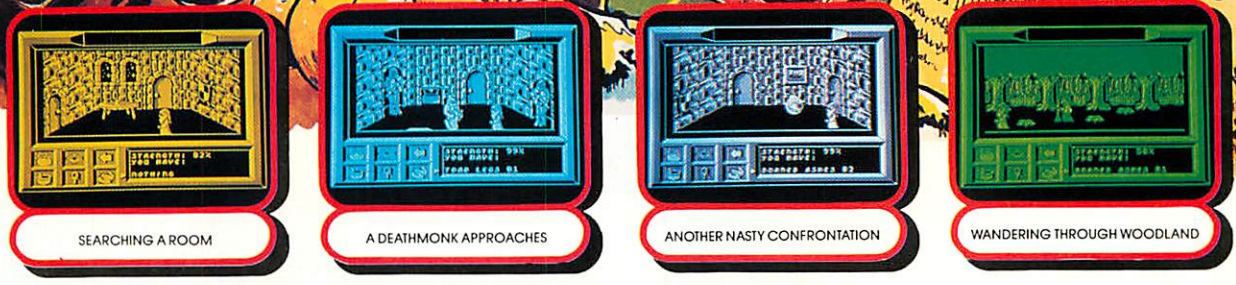

Acorn has at last announced their 'recommended retail prices' for the Arc, explained a company spokesperson. They are some £100 lower than the previous 'indicator' prices, he stressed. Here is the old 'indicator price list' distributed by Acorn at the recent *PCW* show. A 305 is now £699 plus VAT, very reasonable for the machine voted 'Home and small business micro of the year' in the British Micro Awards ceremony at the show. It would have been simpler to have announced a price drop.

A new Macintosh program to work out anagrams has come up with some revealing phrases, writes an anonymous correspondent, 'Tefal'. Have you realised that 'Acorn Computers' is an anagram of the phrase 'ARM concept sour'? And what about 'Same corrupt con'? (And there's worse if you try hard enough – as a family magazine we can't print what they do 'on customers'!) Coincidence? We think the public should be told.

Code	Description	RRP Including VAT	RRP Excluding VAT
ARCHIMEDES COMPUTER SYSTEMS			
AKB10	Archimedes 305	916.60	799.00
AKB10/ AKF01	Archimedes 305 Mono System	974.10	849.00

Acorn's carefully labelled 'indicator' prices

Spellbinder

SEARCHING A ROOM

A DEATHMONK APPROACHES

ANOTHER NASTY CONFRONTATION

WANDERING THROUGH WOODLAND

Leg of Toad, and Golden Fruit, Mix with Ashes and Nightshade Root.

At the end of the thirteenth century, there lived in the land of Lorraine ten wise and powerful Magelords. Each of them had studied sorcery and enchantment from childhood days, and each knew how to evoke potent spells capable of causing metamorphosis and devastation.

You play the role of one such Magelord named Eldon The Spellbinder. Your task is to find the evil Zorn, who has deserted the Magelord brotherhood and fled to the Castle of Lorraine.

Then, by collecting the correct ingredients, you must mix the Ultimate Spell, cast it at Zorn and banish him for good.

A captivating 3D arcade-adventure full of problems to be solved by magical means. Only the appropriate ingredients mixed in the correct order will produce all the powerful spells which you need to complete your mission of destiny.

ZARCH

PRIZE COMPETITION
Can you become the Zarch world Champion?
The player who achieves the highest game score will be awarded an impressive trophy and the original artwork for Zarch, framed and autographed.
There are also 50 Zarch T-shirts for runners-up.
Closing Date: 31st July, 1988.

Leaving the Home Base — the Mission commences

A landed Seeder spreads the debilitating red virus

A raging battle against several alien spaceships

Flying fast and low over a hilly coastline

Zarch — a revolution in software

David Braben is the co-author of the unanimously acclaimed game, Elite — probably the world's highest-selling computer game. After months of program development work, David has now harnessed the speed and performance of the Archimedes computer to create another programming masterpiece... Zarch.

Zarch is unlike any game you have ever seen before. Even the demonstration program, Lander, supplied on the Archimedes Welcome disc, can only give the most basic idea of the features and fascination that Zarch has in store.

For the Archimedes computer: £19.95 (on 3½" disc)
